📋 Executive Summary

Greg Lav shares how managing his weight and staying slightly hungry during the day keeps his mental focus and creativity at their sharpest, treating physical state as a direct input to cognitive performance.

📑 Contents

- 🧠 Mental Sharpness as a Core Part of the Fitness Routine
- ⚖️ Weight as a Focus Indicator
- 🍽️ Daily Eating Strategy for Peak Performance

🧠 Mental Sharpness as a Core Part of the Fitness Routine 0:00

- A large part of his workout routine is not just physical — it is about mental focus and being at his creative peak
  - He frames physical fitness and mental fitness as deeply connected, not separate goals

⚖️ Weight as a Focus Indicator 0:00

- He currently weighs around **197 lbs**
- Once he crosses **205 lbs**, he notices a clear drop in mental sharpness
  - He describes it as no longer feeling "as focused" — a tangible cognitive difference tied directly to body weight

🍽️ Daily Eating Strategy for Peak Performance 0:00

- His preferred approach is to stay somewhat hungry throughout the day
  - He finds that a mild sense of hunger keeps him sharper and more focused during working hours
- He saves a heavy, satisfying meal for the **end of the day**, once his work is done
  - This structure — light during the day, bigger meal at night — is what he calls his optimal approach

> "I almost need to feel hungry. Throughout the day I kind of need to feel a little hungry. That's the optimal way."
