

It's impossible to stay broke if you follow this sequence

Channel: Tim Luong · Published: Jul 08, 2026 · Watch: https://www.youtube.com/watch?v=09rjXFV__fM Source: full transcript

Executive Summary

Wealth follows a three-game sequence — not rules. Build a time-efficient income vehicle, position ahead of market cycles using fear/greed psychology, then own assets in three lanes and borrow against them rather than ever selling.

The Core Insight: Wealth Is Three Games in a Sequence 0:00

- Tim Luong was on track for a traditional Wall Street career before breaking conventional money rules and becoming a multi-millionaire in his 20s
- At age 19, commuting to a finance internship at **\$15/hour**, he researched the Forbes 400 — the richest 400 people in the US — looking for patterns
 - Finding: not a single person on the list built their wealth through a salary
 - Every fortune came from some form of **ownership**
- His conclusion: money doesn't follow rules, it follows a sequence — and most people get the order wrong
- The three games, in order:
 - **Game 1 — The Income Game:** create cash flow that covers expenses *and* frees up time
 - **Game 2 — The Cycle Game:** understand market psychology to position ahead of big moves that happen every few years
 - **Game 3 — The Ownership Game:** convert what's built into compounding assets, then borrow against them instead of selling
- Each game builds the foundation the next one runs on; skipping or reordering them is why most people stay stuck

"Money doesn't follow rules. It follows a sequence that most people end up getting wrong."
