

I Tried Peptides for 7 Days... I'm Shocked

Channel: Brandon Carter · Published: Jul 02, 2026 · Watch: <https://www.youtube.com/watch?v=VACX17CL-E8> Source: full transcript

Executive Summary

After one week on a four-peptide stack, Brandon Carter reports surprisingly strong effects — near-zero hunger, boosted energy despite low caffeine, much deeper sleep, and reduced chronic arm pain — while warning viewers to keep tracking protein or risk losing muscle.

The Peptide Stack: What He's Taking 0:00

- Brandon announced this experiment in a prior video; this is the week-one update
- Four peptides in the stack:
 - **Tesamorelin** — attributed to hunger suppression and potentially visceral/belly fat reduction
 - **Ipamorelin** — attributed to dramatically improved sleep quality
 - **Mod GRF / CJC-1295** — growth hormone releasing peptide; he notes he may switch tesamorelin for this one for better fat loss
 - **BPC-157** — attributed to joint/injury recovery
- He notes he was already relatively lean going into the experiment
- Emphasizes it is only week one and changes may not yet be visible physically

Hunger Suppression: The Biggest Surprise 0:23

- Describes the hunger suppression as something he has
