NVIDIA's CEO Got Caught. Here's My Trade.

Channel: Brandon Carter · Published: Nov 09, 2026 · Watch: https://www.youtube.com/shorts/EYFZBI6YxwU Source: full transcript

📋 Executive Summary

Brandon Carter uses a viral story about NVIDIA's CEO to pitch three NVIDIA bull call spreads expiring January 15, 2027, arguing options spreads offer higher percentage returns than buying shares outright with less capital at risk.

- 🎣 The Setup: CEO Scandal as a Bullish Catalyst
- 📊 Why Spreads Instead of Shares
- 🔵 Spread 1: 170/190 Call Spread
- 🟡 Spread 2: 180/200 Call Spread
- 🔴 Spread 3: 190/205+ Call Spread
- ⚠️ Disclaimer

🎣 The Setup: CEO Scandal as a Bullish Catalyst 0:00

- The video opens by referencing a story about NVIDIA's CEO allegedly cheating on his wife
  - Carter frames this sarcastically using a fake "graph" showing that whenever a big tech CEO cheats on his wife, the stock price "skyrockets"
  - The tone is clearly tongue-in-cheek; the actual trade thesis is simply continued NVIDIA bullishness
- Carter notes he already holds a large number of NVIDIA shares
  - The spreads below are presented as additions *alongside* his existing share position, not replacements

📊 Why Spreads Instead of Shares 0:10

- The core argument: bull call spreads require **less capital** than buying shares outright
  - Less capital invested for the same directional bet = higher *percentage* return if the trade works
- All three spreads share the same expiration: **January 15, 2027**

🔵 Spread 1: 170/190 Call Spread 0:23

- Structure: Buy the 170 call, sell the 190 call
- Cost (max risk): **$970**
- Max profit: **$1,030**

- Condition for max profit: NVIDIA stock must be at or above **$190** at expiration

🟡 Spread 2: 180/200 Call Spread 0:35

- Structure: Buy the 180 call, sell the 200 call
- Cost (max risk): **$760**
- Max profit: **$1,240**
- Condition for max profit: NVIDIA stock must be above **$200** at expiration
- Higher reward-to-risk ratio than Spread 1 in exchange for a higher required price target

🔴 Spread 3: Higher-Strike Spread 0:50

- Structure: Specific strikes not fully named, but requires NVIDIA above **$205** at expiration
- Cost (max risk): **$675** — the cheapest of the three
- Max profit: **$1,325** — the highest of the three
- Highest reward-to-risk ratio, but also the most aggressive price target

Spread	Max Risk	Max Profit	NVDA Must Reach
170/190 Call	$970	$1,030	$190
180/200 Call	$760	$1,240	$200
~190/205 Call	$675	$1,325	$205+

⚠️ Disclaimer 1:00

- Carter explicitly states: *"This is not financial advice. Do whatever you want at your own risk."*
- Viewers are reminded that all trades carry risk and they should make their own decisions
