Raw vs Edited by AI (Same Take)

Channel: Brandon Carter · Published: Nov 09, 2026 · Watch: https://www.youtube.com/shorts/npavXm2hpcg Source: full transcript

📋 Executive Summary

A brief side-by-side showing how AI editing enhances a raw video take — adding dynamic text effects, animated number counters, and automatic tier-based categorization of mentioned tools.

📑 Contents

- 🎬 AI Editing Capabilities Demonstrated

🎬 AI Editing Capabilities Demonstrated 0:00

- The speaker notices on-screen text/words have been automatically placed in the background by the AI editor
  - Implies the AI detected spoken words and rendered them visually without manual input
- **Auto-animated number counters** — when the speaker says a number aloud (example given: "a million and a half"), the AI can animate a counting effect in real time on screen
- Automatic categorization of tools/products mentioned in the video:
  - The AI assigns a tier label to each tool the speaker references
  - Example: "Blacksi" (Blaksi) — assigned **Category D**
  - Example: "Claude" — assigned **Category S** (top tier)
- Overall implication: AI post-production can replace several manual editing steps — text overlays, number animations, and on-screen ratings — from a single raw take
