

WARNING: GPT-6 Astra Is a Money Cheat Code

Channel: Brandon Carter · Published: Sep 10, 2026 · Watch: <https://www.youtube.com/watch?v=JiS8s2ErTco> Source: full transcript

Executive Summary

Brandon Carter walks through his "Infinite AI Cash Grab" — a 5-step system using ChatGPT-6 Astra and Codex to do competitor research, script content, edit videos, package YouTube uploads, and deliver better client results via AI-built tools.

Contents

-  Step 1: Corporate Espionage Dashboard
-  Step 2: AI Swipe File (Auto-Populated Notion Database)
-  Step 3: Niche Hacking & Outlier Content
-  Step 4: Script-Writing Skills
-  Step 5: Building & Editing Content
-  Step 6: YouTube Packaging (Titles, Thumbnails, Descriptions)
-  Step 7: Monetization — Interactive Lead Magnets
-  Step 8: Delivering Better Results for Clients

Step 1: Corporate Espionage Dashboard 2:17

- Build a private dashboard inside a **ChatGPT-hosted site** that aggregates all competitor ads in one place
 - Shows every Facebook and Instagram ad competitors are currently running
 - Clicking any ad reveals: full video, caption, headline, full transcript, hook type, content pillar, core promise, proof, and call to action
 - Shows how long each ad has been running — ads running ~200 days signal proven, successful creative worth mimicking
 - Also surfaces organic content with engagement data (views, comments)
- Why this matters: "Coca-Cola knows every ad Pepsi has on TV" — big companies track competitors obsessively
 - Alternative: manually browsing pages or the Meta Ads Library, but this dashboard centralizes everything
- **Tools needed:**
 - ChatGPT 6 (Astra)
 - **Scrape Creators API** — put ~\$20 on it; provides the transcription capability
 - ChatGPT Work or **Codex** (preferred) — paste a long prompt specifying your niche, industry, competitors, and their channels

- Codex builds and hosts the site; can be set to private (you only) or public
- Free prompt available via GoHighLevel free 30-day trial sign-up (link in description)

Step 2: AI Swipe File (Auto-Populated Notion Database) 5:47

- Traditional copywriter swipe files = saving great ads/copy for future inspiration; most people save Instagram Reels to folders and never revisit them
- **Solution:** automate a Notion database that populates whenever you save a Reel/carousel to a specific Instagram folder
 - Database entries include: link to original post, poster identity, caption, and full transcript (via Scrape Creators API)
 - Setup: dump the skill zip file into a Codex chat, tell it to install the skill, then tell it to walk you through setup — it asks which Instagram folder to monitor
 - From that point forward, every save auto-scrapes, transcribes, and logs the content
- **Scheduling:** Set Codex to run the update on a schedule (Brandon uses 5:00 a.m. daily) so new inspiration is waiting each morning
- Agency use case: maintain swipe files for each client showing what competitors' ads, hooks, angles, and formats are performing best

Step 3: Niche Hacking & Outlier Content 8:54

- **Niche Hacking Skill:** install into ChatGPT or Codex, point it at a competitor's Instagram profile
 - Analyzes their **top 10 reels over the last 90 days**
 - Produces a doc breaking down: what content is working, why it's working, formats and styles used
 - Then rewrites the top 3 reels in your own voice automatically
 - Also uses Scrape Creators API (credits are cheap)
- **Outlier Content** = content that performs significantly above baseline
 - Use **VidIQ** (Brandon has had a membership for 10+ years) — also works on Instagram; install as a ChatGPT plugin
 - Example prompt: "Use VidIQ to find me some outlier Instagram reels in the fitness niche"
 - Result: 15 reels found; top one had **24.4 million views** and was a **199x outlier**
 - That reel belonged to one of Brandon's students (American Stallion) who makes **\$80–90K/month organically**
 - Once you spot an outlier, copy the URL into ChatGPT Work (Astra), prompt: "Use Scrape Creators to transcribe the script of this viral video, explain why it worked, then write a version for me in my voice for my audience — same format, not a copy"
 - ChatGPT knows Brandon is 40, so it writes in his voice automatically
 - VidIQ also finds **YouTube outliers** — example: a creator with <1,000 subscribers got 40,000 views

- **Student case study:** Corey Armstrong came in with 2,000 followers, zero revenue; now makes **\$400,000/year** as an online trainer, mostly by making his own versions of outlier videos on YouTube and Instagram

Step 4: Script-Writing Skills 12:07

- **Content Repurposing Skill:** feed any YouTube video URL into Codex; it auto-generates:
 - Instagram Reel scripts
 - Carousel slides
 - LinkedIn posts
 - X/Twitter threads
 - Email newsletter content
 - Instagram captions
- **Yap Maxing Skill (Short Form):** brain-dump a story or opinion into ChatGPT; it formats it into an Instagram Reel, YouTube Short, or TikTok script
 - Example result: a 20,000-steps-per-day video with **1,600+ comments and 12,000 reposts**
 - Workflow: wake up → walk → talk to ChatGPT → get script
- **Yap Maxing Skill (Long Form):** same brain-dump process but outputs full YouTube video scripts
 - Brandon says almost all his scripted YouTube videos were written this way
- **Belief Breaking Diamond Script** (best for ads):
 - Negative hook → Proof → The mistake most people make → Consequences of that mistake → Better way → Benefit → Call to action
 - Skill flags any weak or missing elements
- **Hook Proof Value CTA Script:** strong hook → proof → value → CTA; ideal for short videos
- **Non-Obvious Tactical Script:** Hook → Super hook → Explain → Rehook → Illustrate → Application
- **Callaway Rewrite Skill:** Brandon scraped the top 100 videos of a creator named Callaway (known for excellent content-about-content), fed all transcripts to ChatGPT, and had it distill the knowledge into a rewrite skill
 - Use: paste any finished script and run the Callaway Rewrite Skill to punch it up
 - "Shout out to Callaway. I cloned you, but that's a sign of respect."

Step 5: Building & Editing Content 18:37

- **King Keo Carousel Skill:**
 - Install skill in Codex; prompt: "Use the King Keo photo carousel skill to make a carousel from this YouTube video"
 - It breaks the video into slides, tells you how many photos are needed (e.g., 13), you upload that many photos of yourself

- Output: fully designed carousel slides with captions, in your voice (because the source is your own words)
- Works with Instagram Reels, TikToks, articles, or raw brain dumps
- Brandon posts these on Instagram and the YouTube Community tab
- **Social Card / Fake Tweet Generator:**
 - A web app Brandon built inside ChatGPT (hosted as a ChatGPT site)
 - Upload a photo; toggle light/dark mode; edit name and text to create social-media-style quote cards
 - Posts well as carousels; can add a CTA at the end
- **King Keto Presentation Skill:**
 - Script (from Yap Maxing) goes to Google Drive → Codex grabs it → turns it into a slide deck in Brandon's style
 - Automatically generates images for slides (prefers minimal text slides)
 - Also outputs speaker notes
 - Brandon calls this "my easiest YouTube workflow to date" and credits it for his recent consistency
- **AI Video Editing with Codex + Repos:**
 - Astra-era Codex edits video at a significantly higher quality than previous GPT models
 - **Required tools:**
 - **Video-use** GitHub repo — paste URL into Codex, say "install this repo" (handles actual cuts and edits)
 - **Hyperframes** GitHub repo — same install process (provides motion graphics)
 - **ElevenLabs API** — ~\$10 credit; best-in-class transcription so the system knows where to place captions, motion graphics, and edits
 - Example prompt: "Use video-use to edit this vertical reel. Remove all mistakes and dead space. Add captions, upbeat hip-hop inspired music, motion graphics, light sound effects when motion graphics appear."
 - Took ~3 iterations to get a final result Brandon liked and posted directly to Instagram
 - The edited reel (20,000 steps video) had mistakes removed, pauses cut, motion graphics added, and AI-generated music

Step 6: YouTube Packaging (Titles, Thumbnails, Descriptions) [25:15](#)

- **YouTube Packaging Skill:** feed a video transcript into ChatGPT Work, run the skill
 - Outputs ~10 potential titles, then recommends the best one
 - Writes an SEO-optimized description
 - Generates timestamps
 - Produces multiple thumbnail concepts
- Thumbnail workflow:
 - Upload 2 photos of yourself

- Prompt: "For each attached image, make all the thumbnail concepts"
- ChatGPT generates visual mockups; pick the best, adjust colors/contrast as needed
- Example: Brandon picked one concept, adjusted car and suit colors for better contrast, used it for a video published 7 days prior

Step 7: Monetization — Interactive Lead Magnets 26:50

- Traditional lead magnets (PDF downloads) are being outperformed by **interactive tools** that deliver instant dopamine
- Types of interactive lead magnets:
 - Calorie / macro calculators
 - Body fat assessments
 - Quizzes and assessments
 - Planners and forms
- **RIP Road Map example (fitness niche):**
 - User inputs: gender, age, height, current bodyweight, goal (muscle gain/fat loss)
 - Uploads a photo of themselves
 - At the results gate: enters name, email, phone number (lead capture)
 - Output: estimated body fat %, fat mass, muscle gap to goal, daily calories, protein, full macros, 6-week game plan
 - Ends with a video sales letter and booking link for a strategy call
- **Macro Calculator:** height, bodyweight, goal → instant macro breakdown; vibe-coded in GoHighLevel
- **Build process:**
 - Tell ChatGPT what you want the web app to do
 - Have it interview you until it has enough detail to write the full prompt
 - Paste that prompt into **GoHighLevel AI Studio** (or Lovable)
 - Iterate with the tool until the app is right (~1 hour of back-and-forth)
 - GoHighLevel advantage over Lovable: leads flow directly into the CRM — no webhooks needed
- **Why GoHighLevel specifically:**
 - Brandon has used it for ~10 years across all his businesses
 - Free 30-day trial (link in description); AI Studio available during trial
 - All prompts, skills, and tools in the video are emailed and texted upon sign-up

"People don't necessarily want to read your PDF file. They want a tool they can use right now. Give them some dopamine right now."

- Brandon coaches 15,000 people; those now using interactive lead magnets are seeing "way higher lead flow — it's not close"

Step 8: Delivering Better Results for Clients 31:43

- "If you're not getting great results for your clients, you are a scammer" — Brandon emphasizes this throughout
- **For agency clients:** build them their own competitor espionage dashboards (same as Step 1) populated with their competitors' ads, scripts, hooks, and angles — used to ideate ad creatives
- **Reel Forge tool** (built for Brandon's online fitness coaching students):
 - Input: target market, niche
 - Features: video idea generator, script writer, content calendar
 - Workflow tracker: Scripted → Filmed → Edited → Scheduled → Posted (with confetti animation on completion)
 - Built inside a ChatGPT-hosted site — clients use their own ChatGPT credits, not Brandon's API budget
 - Contrast with Lovable-built tools, where the builder pays all API costs
- Key insight on ChatGPT-hosted sites: any user logging into the site consumes their own tokens, making it a zero-cost-to-deliver solution for the creator
- Brandon's business **High Ticket Trainer** teaches people to grow online fitness businesses using AI; student American Stallion highlighted as proof (\$80–90K/month organically)
