

I cloned a \$1M/month Shopify lander with Claude in minutes

Channel: Arie Scherson · Published: Jun 20, 2026 · Watch: <https://www.youtube.com/watch?v=TazwwfX0Epw> Source: full transcript

Executive Summary

Arie Scherson demonstrates a fast, zero-code method for cloning a proven, high-traffic Shopify landing page using a free screenshot tool and Claude AI, then importing the generated theme directly into a new Shopify store.

Contents

-  The Target Brand: Bambora
-  Finding Winning Brands via Ad Research
-  Step 1: Capture the Full Landing Page Screenshot
-  Step 2: Clone the Design with Claude
-  Step 3: Import the Theme into Shopify
-  Finding Products with Trendrop
-  Why This Method Works & Key Takeaways

The Target Brand: Bambora 0:00

- The example brand cloned is **Bambora**, a baby sling brand
 - Over 100,000 sales recorded
 - Estimated to have generated over eight figures (10M+) in revenue
 - Receives over 100,000 visitors every single month from countries worldwide
- Arie highlights global selling as one of Shopify's biggest advantages

Finding Winning Brands via Ad Research 0:24

- Bambora was discovered through ad research using an external ad explorer tool (not Meta's native library)
 - At the time of recording, Bambora had **650–690 active ads** running simultaneously
 - Ads were sorted by highest impressions to surface the best-performing creatives
- Creative styles observed:
 - UGC (user-generated content) style videos targeting moms
 - UGC mashup style ads

- A "buy one get one free" promotional offer driving the sale
- Arie recommends using external ad explorer tools over Meta's native library, noting Meta's interface can be glitchy
 - The external explorer used is described as free
- Takeaway: Brands running hundreds of ads and generating massive impressions are actively spending money optimizing — their landers are proven

Step 1: Capture the Full Landing Page Screenshot 1:09

- Tool used: **GoFullPage** Chrome extension
 - 100% free
 - Click the extension icon and it automatically captures a full-length screenshot of the entire page
 - Alternative: keyboard shortcuts can achieve the same result, but GoFullPage is Arie's preferred method
- The output is a single, complete image of the entire landing page

Step 2: Clone the Design with Claude 1:54

- Navigate to **Claude Design** (accessible via Claude's main interface by searching "Claude Design")
- Paste the full-page screenshot directly into Claude
- Write a prompt instructing Claude to replicate the design with your own branding
 - Arie's example prompt: *"Make the same lander for my back product. Change the branding colors to a soft pink, but keep the style the same and change the brand name to Akemi bags."*
 - "Akemi" is Arie's agency name, which he uses for consulting and manages ads for large brands at millions in ad spend
- Claude generates a visually faithful clone with the custom branding applied
- **Critical next step — convert to a Shopify theme:**
 - After the design is generated, prompt Claude: *"Can you make this into a Shopify theme?"*
 - Claude outputs a complete, downloadable Shopify theme as a **zip file**
- Result described as "absolutely beautiful" and better than what you'd pay thousands of dollars to a developer for

Step 3: Import the Theme into Shopify 2:43

- Shopify deal available at time of recording: **\$1/month for 90 days**, plus up to **\$10,000 in cash-back credits** from sales (available only through select Shopify partners)
 - Arie notes this offer may not last long
- Setup steps:
 - Complete Shopify's initial questionnaire
 - Select the **Basic plan**

- Decline optional add-ons (not needed at launch)
- To import the Claude-generated theme:
 - Go to **Online Store** in the left sidebar
 - Scroll to the default theme section
 - Click **Upload zip file**
 - Select and upload the zip file downloaded from Claude
 - Click **Edit theme** to preview
- Without products added, the theme won't fully populate, but the full layout and design are visible and functional

Finding Products with Trendrop 3:49

- If you don't have products yet, Arie recommends the app **Trendrop** (also spelled "Team Drop" in transcript)
 - Found via: Shopify Admin → Apps → All Recommended Apps → App Store → search "Trendrop"
 - Free to install
- What Trendrop offers:
 - Browse trending/hot products currently performing well in the marketplace
 - Custom source any product (not just catalog items)
- Arie recommends chatting with a **sourcing agent on WhatsApp** inside Trendrop to custom source exactly what you want
- His own approach: started one of his main brands using a fully custom formula and custom packaging sourced this way

Why This Method Works & Key Takeaways 4:35

- The core philosophy: take inspiration from brands already spending money and optimizing their funnels
 - "If you can actually just take inspiration from brands that are already printing, you know that they're spending money optimizing their landers, you know that what they're doing is working."
 - Shortcuts a large amount of progress vs. starting from scratch
- Important distinction: **inspiration, not blatant copying**
 - Add your own spin — change branding, colors, name, product category
- Why landing page design matters even before a sale:
 - Creates a better customer experience before they buy
 - Helps you stand out against competition
 - Arie notes that even community members using his pre-built theme struggled to get branding right, showing that design is a real barrier for beginners
- This method requires **no technical or design knowledge** — only basic research skills to find a strong reference brand

- Arie runs a community and course at **shopilab.ai**
 - Includes a pre-built theme the team used to scale a store to **six figures per month in 90 days**
- All links mentioned in the video are in the description
- The generated theme should serve as your **minimum viable product** when launching on Shopify
