

How I Built Muscle, Lost Fat, and Made Millions EP 315

Channel: Brandon Carter · Published: Jul 15, 2026 · Watch: <https://www.youtube.com/watch?v=WvFLke4W0eM> Source: full transcript

Executive Summary

Episode 315 of Victory Talk mixes a live stock market update with trader Greg, Brandon's detailed 3-week peptide experiment results (fat loss, sleep, energy, recovery), and fitness/business advice from super chat Q&A.

Contents

-  Intro, Sponsors & Free Tools
-  Market Update with Greg (Young Candlestick)
-  Brandon's 3-Week Peptide Stack: Results & Breakdown
-  Super Chat Q&A: Fitness, Investing & YouTube
-  Outro & Resources

Intro, Sponsors & Free Tools 0:23

- Brandon opens Episode 315 of the Victory Talk podcast, co-hosted with DJ Grande (moderates comments)
- **Sponsor 1: Go High Level** — Brandon's primary CRM
 - Used to run his entire business: schedules all social media posts (Instagram posts and stories), automates DM responses (replacing ManyChat), sends texts to coaching clients
 - Every profitable business owner he knows uses it
 - Partnered with Go High Level to offer listeners a **30-day free trial** (link in description)
 - "I made millions with Go High Level"
- **Sponsor 2: The RIP Road Map** — free AI-powered body assessment tool (first link in description)
 - Enter gender, age, height, weight; upload a photo
 - AI analyzes the photo, estimates body fat percentage, then outputs exact calorie and macro targets based on your stated goal (e.g., "get shredded")
 - Limited to 3 uses per day to control AI credit costs
 - Brandon demonstrated a live walkthrough: male, age 43, 6'2", 200 lbs, goal = "get shredded"
- **Sponsor 3: 7-Day AI Action Plan** — free ebook
 - Covers how to become an online trainer using AI to get clients, make content, grow a following, and make sales
 - Brandon has taught **over 15,000 people** to grow successful online fitness businesses over **8 years**
 - 100% free, link in description

- **Sponsor 4: Hoe Repellent** — satirical/joke product
 - A spray that repels "bad women" while making the user smell good to "good women"
 - Super chats fund its development; plans to sell in home improvement stores (Lowe's, Home Depot) in the pest control section

Market Update with Greg (Young Candlestick) 0:41

- **Overall Market Structure — "Apex" / Pennant Formation**
 - Market making higher lows AND lower highs simultaneously — prices essentially flat since early May (~2 months of chop)
 - Pattern called an "apex" — the tip of a triangle/pennant formation
 - Could break either direction; Greg urges open-mindedness: "Don't be all out bullish. Don't be all out bearish. Wait for confirmation."
 - Bullish case: break out and test all-time highs
 - Bearish case: break down 5–15% on the NASDAQ
- **Key Macro Drivers**
 - **PPI (Producer Price Index)** report upcoming — tends to mark the monthly high or low; big move expected within days
 - Inflation came in **0.1% cooler than expected** the day of recording
 - Fed rate cut dynamic: lower inflation → potential rate cuts → bullish for stocks; higher inflation → rate hikes → stocks drop (costs more to borrow, earnings fall)
 - **Crude oil** up **20%** since Greg called a bounce at a former breakout/support level; may have another 5–10% upside; approaching resistance
 - War with Iran is the key wildcard for crude oil and inflation: "War escalates → inflation higher → Fed raises rates → markets drop"
 - Trump reportedly formally declared it a war during the episode
- **VIX (Volatility Index)**
 - Currently "dead" / suppressed
 - If VIX picks up, markets can sell fast — Greg recommends setting price alerts on VIX to confirm breakout direction
- **Individual Stock Views**

Stock/Asset	Greg's View	Key Level / Target
Google (GOOGL)	Bullish — forming buy setup; likes calls through 7/22 earnings	Sideways to up; potential Jan call or put credit spread
SpaceX	Bearish — already down 10% after break below 149	Short bounces; accumulate at \$80–90; fair value ~\$25/share

Stock/Asset	Greg's View	Key Level / Target
Microsoft	Neutral — March LEAP calls flat $\pm$ \$100	Bullish target \$500–600; would hold support if bearish
Amazon	Bullish long-term	Watch resistance at \$250; below = potential drop
NBIS	Highest conviction long; started exiting LEAP spreads at \$240–280	Accumulate at \$165–180; currently ~\$195
Copper (CPER)	Bullish — up 20%, bull flagging	Breakout target: CPER \$47.60 (~20% upside); watch \$40.78 breakout level
Bitcoin	Not interested in longs; bearish below \$60K	Below \$60K → buy puts aggressively; above \$60K = neutral chop
Gold	Neutral — bounced then faded	Trading similarly to Bitcoin as "alternative currency"
South Korea	Shorted before 9% drop; Victory Trades members caught it	Still in trouble unless it reclaims support
EM (Emerging Markets)	Long — outperformed S&P; still constructive	Good for diversified/retirement portfolios
XLE (Energy ETF)	Neutral-to-bullish; went long	Highly correlated with oil; should outperform as long as war continues
NET (Cloudflare)	Long — bullish breakout	Above \$280 → target \$300s
VKTX	Bullish — high option premiums	Long 100 shares; sell weekly covered calls for ~\$200; \$3,800 required
CPER (Copper ETF)	Still long — wheeling	Earning ~\$100/week on \$3,500 investment (~10%+/month)

- **SanDisk (SNDK) — Viewer Trade Idea (Short)**

- Memory names have highly uneven cash flows — tricky to evaluate
- Recent earnings: estimated \$13.67 EPS, actually delivered \$23 EPS (nearly doubled estimates); next report August 5th
- Stock up 350% since March; currently around \$1,600–\$2,200 range
- Greg's take: not a great short *yet*; needs to break below **\$1,600** for a technical short
- Problem: puts are **\$22,000** per contract (out-of-the-money) — very expensive
- Best approach if you want to short: **put debit spread before earnings**
 - Buy the \$1,740 put, sell the \$1,735 put (July 31 expiration)
 - Risk: **\$215**; max payout: **\$500** (if stock drops even less than 0.5% by month end)
 - Tag Greg in the free Victory Unit Discord for real-time trade review

- **Greg's Top 3 Winners This Year:** NBIS, Google, TSM
- **Victory Trades Highlights**
 - Live trading room; trade alerts sent to phone; courses included
 - Trades with prop firm money (Apex Trader Funding) — evaluation account starts at ~\$20 using code "VICTORY"
 - PDT rule no longer applicable — can enter/exit freely regardless of account size
 - Sample recent wins: 55%, 60%, 70%, 452% (Apple call lotto: \$25 → \$138), SpaceX short +61%, Meta \$1 → \$250, HIMS +750, South Korea short (bare call credit spread) \$115 risk → \$85 profit in one day
 - Greg on track for **\$5,500 in payouts on one funded account** (\$140 evaluation cost); Lukey Baby made \$1,200 (50% gain) live
 - Greg's niche: **option spreads** — asymmetric risk/reward (risk \$200, potential \$1,000)
 - Pricing: far cheaper than industry standard (\$300–\$500/month or \$10K/year elsewhere)
 - Link in description (3rd or 4th link)

Brandon's 3-Week Peptide Stack: Results & Breakdown 0:47

- **Disclaimer:** Brandon repeatedly states this is NOT medical advice; consult your doctor before doing anything
- All his peptides are obtained via prescription from a licensed medical professional — he refuses to buy from unverified online sources
- Monthly blood work is being done; week 4 blood work results will be shared in a future update
- **Results after 3 weeks:**
 - Down **~10 pounds** in 3 weeks
 - Visibly leaner, abs more visible
 - Significantly reduced hunger — difficult to eat *enough*
 - Eliminated need for daytime naps (used to nap 1–2x/week)
 - Cut caffeine intake roughly **in half** (was taking up to **1,000 mg/day for ~20 years**)
 - Sleep dramatically improved: falling asleep in **under 5 minutes**, waking up **30–60 minutes before alarm** feeling rested
 - Oura Ring confirms high deep sleep and REM sleep
 - Chronic nagging pains (trap, left bicep from old injury) nearly gone — only detectable if actively searching for them
 - Previously paid for an expensive stem-cell-adjacent treatment on the bicep with minimal results; BPC-157 appears more effective at a fraction of the cost
- **The Stack — Peptide by Peptide:**

Peptide	Primary Mechanism	Brandon's Noted Benefits
Tirzepatide (GLP-1 peptide)	Appetite suppression; forces caloric deficit; improves insulin sensitivity	Barely hungry; losing fat easily; improved focus (not thinking about

Peptide	Primary Mechanism	Brandon's Noted Benefits
		food)
Tesamorelin	FDA-approved; stimulates natural GH; targets visceral/abdominal fat	Preserving muscle while cutting; reducing deep abdominal fat
MOTS-c (mitochondria-derived peptide)	Boosts cellular energy; enhances metabolic flexibility; "exercise in a bottle"	Sustained energy all day; reduced caffeine need; eliminated naps
CJC + Ipamorelin blend	Growth hormone peptide blend; taken before bed	Better sleep quality; improved fat loss (lipolysis); muscle recovery
BPC-157 ("Wolverine peptide")	Healing/recovery; gut inflammation	Old bicep and trap injuries nearly pain-free; faster recovery

- **Why Tirzepatide and not Reddit Tirzepatide (Retatrutide)?**
 - No legal way to obtain Retatrutide currently
 - Retatrutide hits a **third GLP receptor** beyond GLP-1 and GIP, which can **increase heart rate** — Brandon is not interested in that side effect
 - Brandon: "I'm already pretty turned up as it is"
 - His goal is single-digit body fat (targeting 5–6%) — didn't start at 20% body fat, so doesn't need the most aggressive option
- **Protein intake challenge on Tirzepatide:**
 - Drinking **100+ grams of protein from shakes per day** just to hit minimum targets because appetite is so suppressed
 - May reduce dose from 2.5 to 2.0 due to extreme appetite suppression
- **Lipolysis explained:**
 - Fat loss is a two-part process: lipolysis (fat cells broken into fatty acids) + oxidation (body burns those fatty acids for energy)
 - CJC/Ipamorelin promotes lipolysis specifically
- **Goal:** "I told my doctor — turn me into Luke Cage. Let's get as close as we can."

"I've been sleeping better than I have in the last 10 years at least. My sleep latency is down to under 5 minutes. I wake up before my alarm, ready to go, not dragging."

🗨️ Super Chat Q&A: Fitness, Investing & YouTube 1:09

- **Aussie — W2 worker, gone from \$37/hr to \$87/hr; 70 hrs/week; 1.5-hr commute. Tax tips? Lift before or after 10-hr construction shift? Investments?**
 - Taxes: Brandon declines — says get a real CPA/financial advisor; his own history with the IRS disqualifies him from advising
 - Lifting timing:

- If possible, lift **before** the shift — more energy available
- If lifting after, still better than nothing; results will still come
- Decide which matters more (job performance vs. gym performance) and prioritize accordingly
- Diet is paramount: "You can't out-train a bad diet, but you can out-diet bad training"
- Investing: three vehicles to consider
 - **Own business** — highest risk, **unlimited upside**
 - **Real estate** — lower appreciation, but generates cash flow (rentals)
 - **Stock market** — better appreciation, more passive; like investing in someone else's business
 - Default if you know nothing: **dollar-cost average into S&P 500**
 - For active trading: join Victory Trades, follow Greg's alerts
 - Note: short-term trades taxed differently than positions held 1+ year
- **YBC — 180 lbs, 19.5% body fat, lean body mass 139 lbs (Hume scale). Tips to increase LBM?**
 - Brandon's advice: **cut first**
 - At 19% body fat, bulking risks adding fat faster than muscle (fat can accumulate faster)
 - Exception: **first year of lifting** — you can build muscle AND burn fat simultaneously in a deficit ("newbie gains"); impossible after that without performance enhancers
 - Use the **RIP Road Map** (free, first link in description) — upload photo, get AI body fat estimate + calorie/macro targets
 - Rule: **if above 15% body fat, don't bulk**
 - Visual payoff of cutting: losing fat makes muscles look bigger even without gaining mass (muscle definition becomes visible — shoulder indents, arm separation, etc.)
 - "At 20% body fat, if you put on five pounds of muscle, it won't be that noticeable. But if you get lean and put on five pounds of muscle, it's going to look incredible."
 - Viewer confirmed 4–5 years of lifting → Brandon says start cutting now; lean gains come after
- **Alexander — inspired by *Awaken the Giant Within*; committing to finishing writing projects; realized most obstacles were imaginary**
 - Brandon endorses the book: "All y'all need to read *Awaken the Giant Within*. Don't buy the audiobook — read the real one."
- **Ben — How to accurately measure body fat?**
 - RIP Road Map AI photo analysis — Brandon considers it "pretty accurate" for free
 - Gold standard: **DEXA scan** — more precise but costs money
 - Brandon uses the most accurate available image AI model in the tool
 - Would only get a DEXA scan to benchmark against the RIP Road Map result
- **Rakna — Working 70 hrs/week (\$75K). Can pivot to tech engineer in 5 months (\$150K, 45–50 hrs/week). Wants to use extra time/money to build entertainment YouTube channel. Good plan?**
 - Brandon supportive of chasing the dream but gives a reality check
 - YouTube entertainment is **extremely competitive** with a very low barrier to entry

- More people fail than succeed; harder to grow than any other social media platform
- Brandon's hypothesis: fewer successful full-time entertainment YouTubers than Ivy League graduates
- Better path if possible: **pair YouTube with a product/service** (e.g., online training, business lead gen) — then you're not dependent on massive view counts to make money
- If going entertainment-only: "You gotta go all in. Chips on the table. You gotta approach it with ferocity."
- Brandon notes his own son wants to be a YouTuber — joked he'd rather his son become a senator for the stock tips

Intro & Resources [1:24](#)

- Victory Talk podcast airs **every Tuesday and Thursday at 5:30 PM Eastern**
- Resources mentioned (all links in description):
 - **RIP Road Map** — free AI calorie/macro/body fat tool (1st link)
 - **7-Day AI Action Plan** ebook — free online trainer business guide
 - **Go High Level** — 30-day free trial CRM
 - **Victory Trades** — live trading room, trade alerts, courses (3rd/4th link)
 - **Apex Trader Funding** — prop firm for funded trading accounts (code: VICTORY)
- Next episode: Thursday at 5:30 PM ET; Greg will do a live options spread presentation for the community
