How to Edit Videos With Claude + ChatGPT (Full Tutorial)

Channel: Brandon Carter · Published: Oct 30, 2026 · Watch: https://www.youtube.com/watch?v=ztkCvvMLgwI Source: full transcript

📋 Executive Summary

Brandon Carter breaks down his complete AI video-editing workflow using Claude Code and ChatGPT Codex — covering tool setup, editing styles, viral content research, niche strategy, and a secret sales funnel that converts free content into high-ticket coaching clients.

🚀 Introduction & Credibility 0:00

- Posted **over 1,000 pieces of content** across all platforms in the last 30 days — 100% edited with AI
- Covers short-form reels in multiple styles AND long-form YouTube videos (all since September)
- Used to pay **$20,000–$30,000 per month** for a team of video editors — now just Claude and ChatGPT subscriptions
- Has helped **over 15,000 people** grow successful online fitness businesses
- Made his **first million as an online trainer**, built on the back of videos — edited the first 1,000 long-form videos on his channel manually
- Free downloadable resource linked in the description covers everything shown
- Video itself is edited with AI as he records it

🛠️ Required Tools & Setup 1:52

- **4 core tools needed:**
  - **video-use GitHub repo** — teaches Claude or ChatGPT how to edit video and improves style output; free; install by copying the URL and telling the AI "install this GitHub repo"
  - **Hyperframes GitHub repo** — adds motion effects to videos; free; install the same way
  - **DeepFilter.net** — cleans up audio (removes wind, background noise, compensates for poor mic quality); free
  - **ElevenLabs API** — transcribes audio from videos and generates on-screen captions accurately; **not free** — recommended $20/month plan; get your API key from the ElevenLabs dashboard and tell Claude/Codex "I have an 11 Labs API key, help me install it"
- Native transcription in Claude and ChatGPT exists but "sometimes the shit be off" — ElevenLabs produces perfect captions
- Install all GitHub repos and DeepFilter into ChatGPT via Codex or into Claude Code
- **Desktop apps required** — this workflow does NOT work on mobile or browser-based versions
  - ChatGPT: download desktop app, use **Codex**
  - Claude: download desktop app, use **Claude Code**

💻 Claude Code vs. ChatGPT Codex: Pros, Cons & Plans 5:17

Factor	Claude Code (Opus 5.5)	ChatGPT Codex (Astra 6.6)
Model quality / "taste"	Better — makes smarter decisions	Good, but needs more guidance
Speed	Slower	Way faster; has "super fast mode"
Budget model	Sonic (not recommended for video)	Soul model — works fine for simple edits
Effort setting	Extra (recommended); High works	Extra High (recommended); High works
Best use case	Higher-quality edits, complex projects	Quick edits, bulk processing

- **Recommended effort settings:**
  - Opus 5.5: set effort to "Extra" — avoid Fast mode (uses too much)
  - Astra 6.6: set to "Extra High"; Soul model on Extra Hot for simple edits
- **Pricing / plans:**
  - Casual (1 reel/week): $20/month plan on either tool is sufficient
  - Heavy usage (Brandon's level — ~1,000 pieces in 24 days): **$500/month ChatGPT** + **$200/month Claude**
  - Both tools run his entire multi-million dollar business, not just video editing
- **Verdict:** If editing only, pick Claude Code. If doing more (business ops, research, etc.), pick Codex. Brandon uses both.

- Cost comparison: editing six versions of one video via API credits would have cost ~**$41** — still cheaper than a human editor (including offshore editors), but this cost is included in his subscription plan

📁 Folder Structure Setup 3:47

- Recommended to use an **external hard drive** to save space
- Create a root folder: `Video Edits`
  - Sub-folder: `B-roll` — all workout footage, lifestyle clips, anything of you doing things
  - Sub-folder: `Pics` — photos you might need for videos; keep adding to it
  - Sub-folder: `Music` — any beats or tracks you want used in edits
  - Sub-folder: `Raw Footage` — unedited source recordings
- Once folders are set up, open Claude Code or Codex, start a new project, and **grant access to the folder** — the AI can then pull B-roll, music, and images automatically

🎬 Live Edit Demo: ChatGPT Codex in Action 10:01

- Source video: a talking-head fitness reel Brandon filmed that day (about walking 20,000 steps)
- Brandon uses pre-built **"skills"** — sets of instructions that handle the full edit from start to finish
  - Simply drop the raw video into Codex and include the skill prompt (e.g., "Talking Head One")
  - Skills contain all directions; the AI references the installed tools automatically
- **Talking Head One skill** (simplest edit):
  - Removes dead spaces and pauses
  - Adds on-screen text
  - Optionally adds background music
- Workflow shown:
  - Drop video in Codex with the skill command
  - AI proposes a plan (e.g., add music, text hook placement)
  - Brandon adjusts: "no music," "hook above the box"
  - Approves and lets it run on Super Fast mode
- Result: clean, postable reel — "I didn't have to cut out the pauses, I did nothing"
- **Codex is significantly faster** than Claude for this step

🎞️ Claude's Multi-Version Editing & Auto-Posting 11:52

- Brandon gave Claude the **same raw video** with **four different skills** simultaneously, producing four distinct edits:
  - Version 1: Basic talking-head (similar to Codex output)
  - Version 2: "Talking Head Two" skill — pulls in images from the Pics folder, overlays them on screen
  - Version 3: Another style variation (motion effects, different text treatment)

    - Version 4: Additional variant
- Claude produced **6 total versions** (3 with CTA for Instagram, 3 without CTA for YouTube Shorts, TikTok, Facebook)
    - The "comment for free thing" CTA doesn't work on all platforms — so it auto-generates CTA-free versions
- **Metrical** integration: Brandon connects Metrical to auto-post all versions to every platform
    - Told Claude to post at 7:00 PM (Instagram) and 7:30 PM (YouTube Shorts + Facebook); TikTok scheduled for Monday
    - Instructed Claude to **check back in 24 hours**, identify best-performing version, and post that to the feed
- Claude handles the full long-form YouTube edit too — with B-roll from the folder, music added, all from **one prompt** using skills
- Brandon bulk-edits **5–10 videos at once**, loads them up, then takes meetings/goes to the gym while they process

🎯 Niche Strategy: The Foundation of Everything 15:37

- **~2.5–3 million online trainers** exist (per Claude, ChatGPT, and Gemini estimates) — the market is massively oversaturated
- Without a niche, **failure is guaranteed** — "You will fail. Failure is imminent."
- A niche has **3 parts:**
    - **Who** — the specific audience you serve
    - **What** — the specific problem you help them solve
    - **How** — your specific method or approach
- Brandon's own niche example:
    - Who: Men aged 25–35
    - What: Get ripped (muscular + low body fat — their exact words)
    - How: Intermittent fasting + HIIT cardio
    - Result: Virtually no direct competitors; when the right person finds you, they **can't price shop**
- Specialist analogy: "A heart surgeon gets way more than a regular-ass doctor. You want to niche down to make the most money."
- **Understanding the "why" behind your niche drives marketing:**
    - Men 25–35 → primary driver is attracting women → market around that (Brandon showed women in videos: 3M+ views on hip-raise videos)
    - Men 35–45 → primary driver shifts to family, kids, longevity → marketing must reflect that
- **Student case study — Jen Caesar:**
    - Was a full-time nurse, married, two small kids, worked 40 hours/week
    - Niche: Busy career moms → lose fat and get toned → at-home workouts
    - Marketing: featured kids, husband, home workouts — spoke only to her target market

- Result: **$500,000 in her first year**, while working full-time with two kids and taking multiple week-long vacations
- November alone: **$48,000** while only working 2 weeks that month; first month: **$20,000**

- Free niche-finder tool in the description: answers a 3-minute interview, AI outputs most profitable niches for you — no credit card required

📈 Niche Hacking: The 10x Outlier Method 24:57

- **Goal:** Find videos with **10x as many views as the creator has followers** — these are proven viral formats you can remix
- **Why start here:** Like learning guitar by playing Beatles songs before writing your own — you must learn what works before creating original content
- **Method 1 — Instagram search + Chrome extension:**
  - Search a niche-adjacent term on Instagram (e.g., "men's fat loss")
  - Install **Sorter for TikTok and Instagram** (Chrome extension) — shows detailed view/follower data
  - Example: Video with 5M views, creator has 125 followers = outlier candidate ✅
  - Example: Video with 156K views, creator has 234K followers = NOT an outlier ❌
  - Example: Tier list video with 3.8M views, creator has 1,047K followers = outlier ✅
  - Use Sorter to download the video directly
- **Transcribing the outlier video:**
  - **Gemini** is the easiest — just dump the MP4 in and it transcribes it
  - Other methods exist but Gemini is simplest
- **Prompt to use with Gemini:**
  - "This is a viral video. Analyze it, tell me why it went viral, transcribe it, then interview me and ask questions until you have enough info to write my version of this script."
  - AI explains why it went viral (study this to learn the craft)
  - AI interviews you about your niche, then writes a custom script in your voice
  - Brandon uses **Whisper Flow** for voice-to-text instead of typing responses
- **Method 2 — Vid IQ + ChatGPT:**
  - **Vid IQ** is a paid tool (primarily YouTube, now expanding to Instagram/TikTok)
  - Tell ChatGPT: "Use Vid IQ to find viral reels in the fitness niche"
  - It returns videos with outlier scores (e.g., 1.4M views, outlier score 199)
  - Community member American Stallion: 1.4M views, 12,500 followers = major outlier
  - That same member now makes **$80,000–$90,000/month organically** from his online training business
- **Free resource — Viral Content Vault for Online Trainers:**
  - A Notion database Brandon and his team maintain
  - Hundreds of viral outliers in the fitness niche, updated **every week**
  - Free, link in description, just add to your Notion board

- **Student case study — Cory Armstrong:**
  - Started with ~2,000 followers, barely paying rent, little experience
  - Niche: Help men 30+ get ripped by optimizing hormones naturally
  - Built following **almost entirely with 10x outliers**
  - Finished last year at **$470,000**; last month was $40,000
- **Tier list skill:** Brandon has a pre-built skill that automatically edits tier list format videos — just record your commentary, dump it in, done in ~5 minutes

📅 Content Batching System 31:48

- Top community members making **$50,000–$100,000/month** post **at least 3 times per day**
- Minimum to be taken seriously: **1–3 reels per day**; reels give the fastest growth; carousels also work
- **Batching workflow (AI-accelerated version):**
  - Day 1: Generate ideas (10x outliers) + write scripts (can be same day with AI)
  - Day 3: Film all videos (do on days off if you have a job) — filming takes the longest
  - Day 3 (same day or shortly after): Edit all videos using skills (bulk load 5–10 at once)
  - Post via scheduling software
- **Practical batch size example:**
  - Generate 21 ideas → film 21 videos → edit 21 → entire week's content done in a few sessions
- **Posting/scheduling:**
  - Use any scheduling software OR let Claude handle it via Metrical integration
  - Brandon shows Claude posting to Instagram at 7 PM, YouTube Shorts + Facebook at 7:30 PM, TikTok on Monday — all from one command
  - Result shown live: post went up, **3,000 views and 2 followers within minutes**

💰 The Secret Sales Funnel 33:43

- **Core philosophy:** Give away free stuff publicly; sell in private — you can never seem "salesy"
- **5-stage funnel:**
  - Stage 1 — **Content** (reel with a CTA): Tell viewers to comment a keyword to receive a free resource
    - Free resources: guide, mini-course, cheat sheet, meal plan, meal list, ebook
    - Content should be 10x outlier remixes at first
  - Stage 2 — **DM the free thing**: Use automation (Brandon recommends **GoHighLevel** over ManyChat — more robust, 30-day free trial)
  - Stage 3 — **DM sales conversation**: Use a DM sales script to book a call
  - Stage 4 — **Sales call**: Use a Zoom sales script
  - Stage 5 — **Close** ("can't disrespect the close")
- **The math (Cory Armstrong's numbers):**

- Reel about hormone optimization: **500,000 views, 7,800 comments** (people requesting free time-eating guide)
- At just **1% conversion**: 78 clients from one reel
- Another reel ("comment A1C" for free diabetes destroyer course): **7,400 comments on Instagram + 3,000 on Facebook = ~10,000 total**
- 1% of 10,000 = **100 new clients from one reel**

> This math is how Cory built a $470K/year business — not by selling hard, but by giving away free content at scale and converting a tiny fraction through private DMs.

🤖 Using AI to Create Lead Magnets 37:32

- **Muse** (Meta's AI assistant) has native Instagram integration — can analyze any creator's content
- Brandon's workflow for creating free guides:
  - Tell Muse: "Analyze [student's] content and give me ideas for lead magnets they can give away to clients"
  - Then: "Analyze her content, look at what she actually says, and make a free guide for her"
  - Example: For student Kelly Nicole (wedding-focused content), Muse generated a **Bride Shred Checklist** — complete with relevant advice matching Kelly's voice and a link to her coaching application
  - Student just needs to swap in their photo and it's ready to use
- Process takes minutes and produces a polished, on-brand lead magnet automatically

✅ Wrap-Up & Free Resources 38:37

- Brandon answers YouTube comments from the toilet — commits to responding to this video's comments daily
- **The process for long-form YouTube editing is identical** to short-form; dedicated long-form tutorial available if requested
- Free resources in the description:
  - **Free guide** — all links, tools, and setup instructions from this video
  - **Free niche-finder tool** — 3-minute AI interview → outputs most profitable niches for you
  - **Viral Content Vault** — weekly-updated Notion database of fitness niche outliers
- Final tool recommendation: if editing only, pick **Claude Code**; if doing everything (editing + business ops + research), pick **ChatGPT Codex**
- "Claude's in charge. Claude edited this video. I'm just the talent at this point."
