The Math To Make 30K A Month As An Online Trainer

Channel: Brandon Carter · Published: Oct 16, 2026 · Watch: https://www.youtube.com/shorts/SznzStKvnSc Source: full transcript

📋 Executive Summary

Brandon Carter — who made his first million as an online trainer and has taught 15,000+ people — lays out a 5-step reverse-engineering formula to calculate exactly how many daily DM conversations you need to hit $30,000/month.

📑 Contents

- 🏆 Credibility Context
- 🔢 The 5-Step Revenue Math Framework

🏆 Credibility Context 0:00

- Brandon Carter establishes authority before presenting the framework
  - Made his **first million dollars** as an online trainer
  - Has taught over **15,000 people** how to grow successful online fitness businesses

🔢 The 5-Step Revenue Math Framework 0:05

- The entire system works by starting at your revenue goal and dividing down to a daily action number
  - Each step converts one metric into the next using your own real rates
  - Designed so any trainer can plug in their own numbers

> The core insight: instead of guessing at activity, you calculate the *exact* daily conversations needed — making execution a math problem, not a motivation problem.

- **Step 1 — Calculate monthly sales needed**
  - Formula: `Goal Revenue ÷ Program Price = Sales Needed Per Month`
  - Example anchor: goal revenue = $30,000/month
  - The program price is the price of your coaching offer
- **Step 2 — Calculate calls needed per month**
  - Formula: `Sales Needed Per Month ÷ Close Rate = Calls Needed Per Month`
  - "Close rate" = the percentage of sales calls on which you successfully enroll a client
  - Uses *your actual* close rate, not an industry average

- **Step 3 — Calculate calls to book per month**
  - Formula: `Calls Needed Per Month ÷ Show-Up Rate = Calls to Book Per Month`
  - Accounts for the reality that not everyone who books a call actually shows up
  - Uses *your actual* show-up rate
- **Step 4 — Calculate DM conversations needed per month**
  - Formula: `Calls to Book Per Month ÷ DM-to-Booking Rate = Conversations Needed Per Month`
  - "DM-to-booking rate" = the percentage of direct message conversations that result in a booked call
  - Reveals the total monthly prospecting volume required
- **Step 5 — Calculate daily new conversations needed**
  - Formula: `Conversations Needed Per Month ÷ 30 = New Conversations Per Day`
  - Dividing by 30 converts the monthly target into a simple, actionable daily number
  - This daily number becomes your **non-negotiable daily prospecting task**
