I Filmed in a White Room. AI Moved Me.

Channel: Brandon Carter · Published: Nov 08, 2026 · Watch: https://www.youtube.com/shorts/LHSFT9tdPJ4 Source: full transcript

📋 Executive Summary

Brandon Carter films in a bare white room and shows how AI can add on-screen text effects, animate numbers, and auto-categorize tools — handling visual production without a traditional setup.

📑 Contents

- 🎬 AI-Generated Visual Effects in a White Room

🎬 AI-Generated Visual Effects in a White Room 0:00

- The presenter notices text/words appearing on screen and questions who placed them there
  - Implies an AI system is automatically adding on-screen text overlays during filming
- The AI can apply visual effects tied to the presenter's actions or speech
- The AI can count numbers in real time as the presenter speaks them aloud
  - Example number spoken: **1.5 million**
- The AI can classify and categorize tools the presenter mentions, displaying the category on screen
  - Perplexity — categorized as "Class D"
  - Claude — categorized as "Class S"
- Overall demonstration: a plain white room is the only physical production requirement; AI handles the rest of the on-screen visual layer
