

I replaced a \$5,000/month ecom ad agency with Claude in minutes

Channel: Arie Scherson · Published: Jun 25, 2026 · Watch: https://www.youtube.com/watch?v=KdNjvG54x_g Source: full transcript

Executive Summary

Arie Scherson walks through replacing a \$5,000/month ecommerce ad agency using Claude + the Higgsfield MCP connector — covering strategy research, AI ad creative generation, UGC video creation, and Meta launch — all in a single chat session.

-  Step 3: Generating Ad Creatives
-  Step 4: Creating UGC Video Ads
-  Step 5: Launching on Meta
-  Post-Generation Editing with CapCut
-  Opportunity: Run This as an Agency Service

What You're Actually Paying an Agency For 0:00

- Agencies charge \$5,000/month and deliver three core things:
 - **Strategy** — who you're targeting and what angles to run
 - Creative — the actual ad assets
 - Launching — getting ads live on Meta
- Not every agency covers all three; some only do creatives or only handle Meta setup
- The claim: you can now do all three with AI, specifically Claude + Higgsfield MCP

Setting Up Higgsfield MCP in Claude 0:22

- The integration works through Higgsfield's MCP (Model Context Protocol) connector for Claude
 - Also compatible with OpenClaw or Hermes if you use those agents
- Step-by-step setup process:

- Open Claude and click **Customize** in the left panel
- Go to **Connectors**
- Click **Add Connector** → **Add Custom Connector**
- Name it "Higgsfield"
- Paste the official Higgsfield MCP link (link left in video description)
- Click **Add**
- Safety warning: only use the official Higgsfield link
 - Using unofficial links risks data theft or malicious use of your Claude account
- Once added, the connector lets Claude generate and manage ad creatives directly from chat

🎯 **Step 1: Building Your Ad Strategy 1:57**

- Strategy is the foundation — without it, Claude outputs generic ads rather than winning ones
- **Rule #1: Don't reinvent the offer** — find what's already working in the market
 - Tool: Meta Ads Library (free, public)
 - Search any brand and sort ads by **top impressions** — high impressions = winning ads
 - Example finding: problem-aware hooks like
