

You can't grow inside a broken model.

Channel: Tim Luong · Published: Jun 26, 2026 · Watch: https://www.youtube.com/shorts/7_F5TpR-3P8 Source: full transcript

Executive Summary

When fulfillment bottlenecks hit, working harder is the wrong answer. The fix is redesigning your offer so value delivery scales faster than the time it takes — otherwise growth is structurally impossible.

Contents

-  The Fulfillment Bottleneck Problem
-  The Core Principle: Value Must Outpace Hours
-  Real-World Example: The San Jose Class
-  The Solution: Moving to an Online, Scalable Format

The Fulfillment Bottleneck Problem 0:00

- There comes a point where fulfillment can't keep up with demand
 - Quality of delivery drops, and customers are no longer fully satisfied
 - This creates a hard ceiling on growth
- Trying to push past this by working harder doesn't work
 - The problem is structural, not effort-based

"You can't grow inside a broken model."

The Core Principle: Value Must Outpace Hours 0:00

- The fix requires redesigning the offer and fulfillment structure
 - The goal: value delivered must grow **faster** than the hours it takes to deliver it
- Multiple offer formats exist that can enable this:
 - High ticket
 - Group
 - Hybrid
 - Recurring
- The right format depends on the specific business — no one-size-fits-all answer
- Before scaling anything, audit whether the offer is actually designed to scale

Real-World Example: The San Jose Class [0:23](#)

- Tim ran an in-person class in San Jose with a hard capacity cap of **20–25 people**
 - Reached **\$100K/month** within that constraint
 - Could he have filled more seats? Probably — but scaling further would have required:
 - Opening multiple locations across different cities
 - Managing the operational complexity of each
 - After mapping it out, he concluded: "This is not sustainable"

The Solution: Moving to an Online, Scalable Format [0:46](#)

- The insight: deliver the same core value in an online format
 - Online removes the physical capacity ceiling
 - Allows reaching the **entire US** in a single session rather than city by city
- The key question to ask: how can I do the exact same thing in a way that scales?
 - Same offer, same value — different (scalable) delivery mechanism
