

AI Side Hustles You Can Run While Working Full-Time

EP 324

Channel: Brandon Carter · Published: Aug 19, 2026 · Watch: <https://www.youtube.com/watch?v=PY3xfqvGe5Q> Source: full transcript

Executive Summary

Brandon Carter (online fitness business coach, \$20M+ earned online) ranks 10+ AI-powered side hustles by income ceiling and barrier to entry, covering YouTube channels, online coaching, AI automation, ghostwriting, UGC, and more — plus a live market analysis segment with stock analyst Greg.

Show Introduction & Sponsor Plugs 0:47

- Episode 324 of the Victory Talk Podcast, hosted by Brandon Carter
- Co-host / chat moderator: his girlfriend DJ Chaita Grande Movia
- Episode focus: AI side hustles + some fat loss content at the back end
- **Sponsor: Fitness Revenue Roadmap** (free tool, link in description)
 - AI quiz (~9 questions, ~4 minutes, mostly multiple choice)
 - Trained on Brandon's knowledge from helping 15,000+ people grow online fitness businesses
 - Tells you where you are, what your income goal requires, and how long it will take
 - Student example — Anna Quinn, Dallas TX, age 22:
 - Made ~\$300 in online coaching the 8 months before joining
 - Made **\$79,600 (~\$80K) in 8 months** after joining
 - Her dad told her she'd out-earned him in the prior 4 months
- Sponsor gag: "Hoe Repellent" spray — a running comedic bit; target launch around Brandon's September birthday

Sales Book Recommendations (Super Chat Q&A) 4:24

- Viewer Alex asked for the best book on sales and closing
- Brandon's recommended reading order (three-piece):
 - **Step 1 — Start with:** *The One Minute Salesperson* — thin book, can read in an afternoon; Brandon first encountered it at a sales internship with Abbott Laboratories (Fortune 100) after his freshman year of college
 - **Step 2:** *How to Win Friends and Influence People* — not a sales book on the surface, but read it with sales in mind; he calls it his all-time favorite sales book
 - **Step 3:** *Pitch Anything* — more applicable to one-to-many sales (webinars, presentations), but principles transfer to one-on-one; read the first two before this one
- Also mentioned: *The Psychology of Selling* by Brian Tracy (good but not the starting point)

Side Hustle #1: Niche YouTube Channel 6:32

- High demand, low supply of truly niche channels — a real opportunity
- **The three money-making macro niches:** Health, Wealth, Relationships (entertainment is too competitive)
- The key principle: **"The riches are in the niches"** — niche down as far as possible
- Niche-down examples:
 - Health → Fitness → Fat loss → Fat loss for men after 40 (or women going through menopause)
 - Health → Fitness → Peptides
 - Wealth → Investing → Real estate → Section 8 investing, house flipping, Airbnb arbitrage
 - Wealth → Investing → Crypto investing (still broad — go deeper)
- Why niche down: separates you from competition, lets you dominate a specific audience
- **How to use AI for YouTube content:**
 - Use Vid IQ — helps identify video ideas specific to YouTube
 - Use "1 of 10" AI tool — another video idea generator
 - Use Claude or ChatGPT for scripting:
 - Tell it the topic (e.g., "5 fat loss mistakes men make in their 40s")
 - Have it interview you point by point (Brandon uses a custom "skill" / prompt set)
 - Brandon's workflow — "Claude Walks": walks around near his pool or on a balcony talking to Claude via voice, brain-dumping answers to each bullet point
 - Claude compiles everything into a Google Doc script
 - Request a bullet-point version of the script; reference it on iPad while recording
- **Monetization:** YouTube AdSense + selling courses or coaching in the three main niches
- Caveat: YouTube is the hardest social media platform to grow — takes a long time to build an audience, but the payoff is worth it

Side Hustle #2: Online Coaching 10:47

- How Brandon made his **first million dollars** — before AI even existed
- Strategy for organic content growth — finding and remixing "outlier content":
 - **10x Outliers** = videos/posts that got 10× more views than the creator's subscriber/follower count
 - Search your niche on YouTube or Instagram and scan for these outliers
 - Brandon's free tool (fitness niche only, link in description): a live Notion database of hundreds of 10x outliers, updated daily by Brandon's team
 - Don't copy — take hooks and formats, make your own version
- **Lead magnet strategy:**
 - Create a free checklist, grocery list, or guide using Claude, Gamma AI, or Notebook LM
 - Post on Instagram: "Comment [word] to get the free guide"
 - Use **Go High Level** software linked to Instagram to auto-DM the free guide when someone comments the keyword
 - Once Go High Level DMs them, start a DM conversation → book a sales call → close the client

- Student results:
 - **Jen Caesar** (nurse from Florida, no prior training experience): April revenue = **\$49,927**; now does **\$100,000+/month**; quit nursing
 - **Will** (DC, working 40+ hours/week at full-time job): made **\$5,940 in 7 days** during his first month; made **\$32,000+ in his first month** (since Aug 8); now works his job only part-time
 - **Corey Armstrong** (started with ~1,000 followers, no online training experience): **\$40K last month**; **\$470,000 in his record year**
 - **Alejandra**: made **\$9,000 in her first 28 days** in the program
 - **Kelly Nicole Fit** (joined in college as marketing major): went from \$1–2K/month to nearly **\$20K/month** at age 23 within 6 months
 - **Big Jazz** (recent clip): **\$28,100 in the month** at time of recording, targeting \$35K
 - **Gino** (new to group, second week): closed his first **\$997 client**; hit **\$10K in first month**
- AI tools to scale online coaching:
 - Use AI to come up with content ideas and write scripts
 - Some advanced students dump all their knowledge into Hermes or OpenClaw, give the agent access to their training platform on a second computer that stays on 24/7 — the agent responds to clients as them
 - Use AI agents (Hermes, OpenClaw, Grockbot) to keep clients accountable via DMs
 - Brandon's recommendation: don't go fully automated; keep a human touch, but use AI to ensure no messages fall through the cracks, especially with 50–200 clients

Side Hustle #3: AI Automation Specialist 14:29

- Work with companies to build AI workflows that save time or generate revenue
- Clients: businesses with big teams OR solo entrepreneurs who need more time
- What you can automate:
 - Voice agents
 - Email and DM responders
 - Any repetitive task
- Build workflows using: Claude, OpenClaw, Hermes, or Grockbot
- Real-world example — Brandon's friend Galani:
 - One-man business
 - Goes into businesses, sets up AI automations
 - Charges an ongoing **retainer** to keep things running and fix breakages
 - Makes **over \$1 million/year**
- Brandon's personal use: had an AI agent log into his Upwork account, post a job, screen applicants, recommend the best, hire them, and pay them — all autonomously ("Tell me when it's done")
- Key insight: this is not going away anytime soon

Side Hustle #4: Career Coach 15:24

- Always in demand — layoffs never stop; people always job hunting even with a job
- Steps:
 - Pick one in-demand career category to specialize in
 - Use Claude to draft templates based on real examples
 - Use Hermes Agent, OpenClaw, or Grockbot to post your services on Fiverr, LinkedIn, or Upwork
 - Use AI agents to monitor responses
- Upsell: one-on-one coaching sessions

Side Hustle #5: Selling Digital Products / Courses 16:03

- Pros: build once, zero delivery cost, high margins
- Good for people with limited time (can't do sales calls or DM closes)
- Critical: **niche way down** — "AI course" is too broad; go to "AI automations for Hermes" or "Grockbot for solo entrepreneurs"
- There's no real instruction manual for tools like Hermes or Grockbot — opportunity exists
- Use AI to help structure the course, but bring your own expertise
- **Running ads with Manus (owned by Meta):**
 - Manus integrates directly with Facebook Ads Manager
 - You don't need to know how to run ads — just tell Manus what you're selling and let it go
 - Friend example: couldn't figure out ads for years; now makes an extra few thousand dollars/month selling digital products almost entirely via Manus-run ads
- Fitness caveat: fitness is too mature/saturated for courses — people don't buy fitness courses anymore but will buy coaching (because coaching sells accountability, not just information)

Side Hustle #6: LinkedIn / Twitter Ghostwriting 17:53

- Real hustle — Brandon knows a well-known personal brand who pays people to write LinkedIn and Twitter posts
- The workflow used by that ghostwriter:
 - Load the client's past writings into a Claude project to steal/replicate their voice
 - Note: **Use ChatGPT instead of Claude** — Claude now watermarks its writing, which can be detected
 - Draft full weeks of posts in batches
 - **Human editing is essential** — manually remove anything that sounds like AI slop
- Value-add upsell: **post it for them** using tools like Metricool or Go High Level (link their accounts, schedule and post on their behalf)
- Brandon's personal analogy: paid a guy named Ryan to film/edit all his shorts, TikToks, and Reels — filmed for 2 days once a month, got a few hundred videos, Ryan's team edited and posted everything

- Business owners love having content completely off their plate

Side Hustle #7: AI Compliance Specialist 19:43

- Described as an **extremely rare skill** with high demand
- Companies using AI agents for outreach (calls, DMs) often don't know compliance rules
- Key compliance issue: robocalls especially in California — you must disclose the AI and follow specific protocols or face serious legal trouble
- These companies have large marketing budgets but lack AI legal knowledge
- The intersection of AI knowledge + knowledge of state/federal laws around AI = very lucrative niche
- Companies will pay well to stay out of trouble

Side Hustle #8: Course Creation as a Service 20:16

- Something Brandon used to do with a marketing agency — worked with fitness influencers who weren't monetizing well
- His old model:
 - Come up with course ideas and outlines
 - Film with the influencer
 - Team handled editing, uploading, everything
 - Paid all costs including ad spend
 - Split profits **50/50** with the influencer (because he took all financial risk)
- Note: doesn't work in fitness anymore (people don't buy fitness courses)
- Now: target doctors, lawyers, professionals with even a decent following and no courses
- **How to do it with AI:**
 - Sit down and record a brain-dump session with them — ask as many questions as possible
 - Get it transcribed, dump into Claude, say "structure this as a course with chapters"
 - Each chapter = a module; each segment = a video
 - Have them record the content on camera (they know the subject, can speak freely)
 - Use AI to help with editing, putting it together
 - Use Manus to run ads

Side Hustle #9: AI Consulting 22:09

- Similar to AI automation specialist but advisory rather than hands-on build
- Consult businesses on how to use AI to improve workflows and make more money
- Then optionally charge for automation build-out on the backend
- Strategy:
 - Niche down hard — pick ONE problem you solve (e.g., AI outreach, AI lead gen, CRM management)
 - Market one thing; expand once you're in the door

- Brandon's friend Galani (mentioned again) also does consulting and earns significant income

Side Hustle #10: Local Home Services + AI Ads 21:58

- More street-level / offline hustle with AI as the competitive edge
- Choose a lane: power washing, window cleaning, lawn care
- Use Claude for:
 - Google Business profile setup
 - Ad copy
 - Door-knocking scripts
 - Pricing structures
- Use Manus (Meta-owned) to run local ads — just tell it what you're selling
- Why local ads work so well: far less competition within a zip code radius than nationally
- Key edge: other local competitors (e.g., other power washers) have never heard of Manus — you can dominate the local market easily

Ranked Tier List: All AI Side Hustles 39:27

- Brandon goes through a visual tier list (Legendary → Solid → Pretty Good → Average → Trash)

App / Tool Building 39:43

- **Tier: Solid**
- Build once, then just market
- AI handles the entire build — you provide the idea and spec
- Process:
 - Open Claude/ChatGPT/Groqbot → prompt: "I want to come up with ideas for an iOS app — interview me, ask as many questions as needed, then give me ~10 ideas"
 - Pick an idea → prompt: "Help me write a PRD (Product Requirements Document) for this"
 - Feed the PRD into an app-building LLM: **Replit, Bolt, or Ro** (recommended for iOS)
 - They publish to the App Store for you
- The hard part is **marketing**, not building
 - Options: big following, paid influencers, or run ads
 - Use Manus (Meta-owned) to run ads — link your Manus account to Meta Ads Manager
- Doesn't reach Legendary because marketing is still a challenge

Online Coaching — Legendary 43:18

- **Tier: Legendary** — Brandon's top pick and personal path to his first million
- AI use cases for coaches:
 - Content ideas and scripts

- Running ads (Manus)
- Client training via AI agents (Hermes, OpenClaw) that respond as you
- AI accountability agents that log into your platform and respond to clients
- Lowest barrier to entry with the highest ceiling on this list

Script Writing for YouTubers / Brands [46:23](#)

- **Tier: Solid**
- Brandon met an Instagram growth expert charging **\$1,000 per script**
- There is real money here if you can write scripts that don't sound like AI slop
- Brandon's own method: have AI interview you on the topic, then write the script based on your answers — far better than "write me a fat loss script"
- Some of Brandon's highest-viewed videos were scripted this way

Bookkeeping Services [47:00](#)

- **Tier: Solid** — high demand but **very saturated**
- Every money-making business needs a bookkeeper
- Use AI tools to handle spreadsheets and automate bookkeeping workflows
- Getting clients is the hard part — stand out via social media, Upwork, Fiverr
- **Testimonial Harvest strategy** (applies to all hustle types):
 - Work for free for ~5 people for a month → get great results → get testimonials
 - Then offer them 50% off to continue; those often become first paying clients
 - Use testimonials in all ads and marketing

Sales Call Analysis Service [48:40](#)

- **Tier: Solid** — low competition, high value
- Most large sales team managers never watch or analyze individual calls
- How to build this service:
 - Interview the sales manager: "What does a great call look like?"
 - Get transcripts of the company's best calls → load into a Claude or ChatGPT project
 - Link to their CRM or note-taking app in Zoom
 - Set up automation: every new sales call auto-feeds into the project and gets reviewed against best-call benchmarks and the manager's criteria
 - Output: a grade per call; weekly and monthly grades per sales rep
- Brandon does this for his own sales team already
- Most sales managers don't know how to do this — big opportunity to offer it as a service

Niche YouTube / Personal Brand — Legendary [50:21](#)

- **Tier: Legendary** — if you can build it
- Brandon built all his businesses (\$20M+) on the back of his YouTube following

- Highest barrier to entry on the list — hardest to get good at
- Niche down principles (repeated): fitness → fat loss → fat loss for men over 40 OR fat loss with peptides; real estate → section 8 investing, etc.

💌 Dating Profile Writing [51:16](#)

- **Tier: Average** — real service exists on Upwork/Fiverr, but demand is not high enough
- AI can help write/improve profiles
- Brandon jokes about his edge in "Black baby names" consulting as a related niche

👤 Sales Funnel / VSSL Copywriting [52:07](#)

- **Tier: B (Pretty Good)**
- Write long-form sales copy, sales pages, and video sales letter (VSSL) scripts for personal brands and businesses
- Target high-revenue niches: finance, tech, health (avoid fitness)
- Process:
 - Load proven frameworks into Claude (PSA, AIDA, etc.) OR upload transcripts of high-converting VSSLs already making money
 - Also load up the creator's past videos/transcripts so it sounds like them
 - Draft copy; offer a **free sample** to prove your skill
 - Move to per-script pricing or a monthly retainer
- Why clients love it: scripts based on their own content sound like them — "everybody loves the smell of their own farts"

📹 UGC Video Creation for Brands [52:45](#)

- **Tier: Solid / Pretty Good** — big industry
- User-generated content that brands use in their ads
- How to start:
 - Build a portfolio
 - Find the ads a target brand is already running: go to Facebook Ads Library, search the brand, see every active ad
 - Download those ads, transcribe them, load into Claude/ChatGPT project
 - Instruct it to write scripts in the same style → record the video → submit to brands
- You don't need to post on your own page — brands just need real-person video
- AI video still looks fake and doesn't convert as well — real humans are in demand
- Brandon knows people making **\$10,000–\$20,000/month** doing UGC ads
- No big following required

🎓 Tutor / Test Prep Consulting [53:31](#)

- **Tier: B (Pretty Good)**

- Teach a specific academic subject — SAT prep, interest exams, etc.
- Must actually know the subject
- AI use cases:
 - Claude/ChatGPT generates practice problems and tests
 - Explains technical concepts in simpler, practical language
 - Builds study guides fast
- Outreach automation: use Codeex (opens its own browser, you log in once) to post on job boards, tutoring platforms, community groups autonomously
 - Brandon used Codeex to log into Upwork, post a job, screen applicants, select the best, pay and hire them — all hands-free
- Grockbot also promising for this but Brandon doesn't trust it yet (owned by Elon Musk)

Amazon KDP Self-Publishing [54:18](#)

- **Tier: D / Trash** (used to be better)
- Now flooded with AI-generated slop — very hard to stand out
- Brandon published his own book on Amazon in 2014 (pre-AI) — only 3 reviews, 4.5 stars, didn't make much
- Can still work if you pick a very narrow niche and maintain quality
- Brandon's recommended non-slop approach (how he wrote his books):
 - Write a detailed outline
 - Record yourself speaking each section
 - Transcribe the recordings
 - Hire a real human editor on Upwork to polish the transcript into a book
 - Now you can do this with Claude/ChatGPT compiling the recorded sections
 - Still send to a **human editor** before publishing — don't skip this step

Online Courses (Digital Products) [55:00](#)

- **Tier: Pretty Good** — was great 10 years ago, now saturated
- The math problem: average course sells for ~\$50; to make \$10K/month you need to sell 200 courses — hard to sustain
- Courses require constantly acquiring new buyers; coaching is recurring
- Still works if:
 - High-demand, very specific niche (e.g., "AI automations for solo entrepreneurs")
 - Coaching upsell on the back end — course buyers who don't follow through become coaching leads
- **Self-Liquidating Offer strategy:**
 - Run ads to a cheap course; goal is just to break even (not profit) on the course sale
 - You get customers for free
 - Much easier to sell them the next thing (coaching) once they've bought once
 - Analogy: "It's easier to have sex with someone you've already had sex with than find a new person"

- For fitness specifically: sell the course cheap, use it as a lead magnet into online coaching

Business Newsletter / Email Writing [57:35](#)

- **Tier: Solid**
- Many businesses have big email lists they never use — leaving money on the table
- Real example — Brandon's friend "Splashman":
 - Writes emails exclusively for **drop-shipping companies**
 - Handles full email marketing integration via **Klaviyo**
 - Evolved from per-email billing to taking a **percentage of revenue attributed to email** (Klaviyo can track this for e-commerce)
 - Has made millions doing this
- AI tip: load up high-performing email examples ("bangers") into Claude or ChatGPT and say "write like these" — don't let it write from scratch or it'll produce slop
- Key principle: **train AI on what good writing looks like** before asking it to write

AI Coaching & Consulting — Legendary [1:02:39](#)

- **Tier: Legendary** — if you truly master AI
- Deep knowledge required: workflows, automations, Claude Code, Codeex, OpenClaw, Hermes, Grockbot
- Help companies integrate AI into their operations
- Sometimes clients want a consultant who guides them, not someone who does it for them
- Galani (mentioned again): charges consulting fees + gets paid to do the implementation too — very lucrative

Course Creation as a Service [1:03:25](#)

- **Tier: Solid**
- Find personal brand owners with large followings not monetizing well
- Build their courses, handle marketing, take a **revenue split**
- Brandon's old model: 50/50 split because he paid for everything (editing, ad spend, ideas)
- With AI: faster scripting, faster editing, Manus for ads
- May not get 50/50 as a newcomer, but can still earn well

Done-For-You Content Agency [1:06:07](#)

- **Tier: S (possibly the highest non-coaching tier)**
- Brandon's friend Ryan McInn runs a short-form content agency
- Full service: idea generation, scripting, editing, posting — influencer just records raw footage once a month
- Brandon was a client: filmed raw footage, Ryan's team handled everything else
- Ryan was making **a few million dollars/year** doing this
- Hard to build clientele initially, but very powerful once established

Market Recap with Analyst Greg 23:21

- **Disclaimer: Not financial advice — "arts and crafts"**
- Guest analyst Greg joins for technical analysis segment

Asset	Outlook	Key Level / Note
S&P 500	Neutral-to-short near term	Up 11% YTD; Greg's portfolio up 17% YTD (6% alpha); JP Morgan target 8,000 EOY (+4%); Bank of America bearish target 7,100 (– 7.5% from high)
Semiconductors (SMH)	Bearish near term	Down 4% on the day; failed breakout, gapped down
Small Caps (IWM)	Neutral to bearish	Down 1.2%; Greg holds IWM puts; price \$300.23; support ~\$293
Transportation (IYT)	Bearish near term	Greg bought September puts; some managers predict –50% (Greg thinks that's extreme); oil prices + Middle East conflict the drag
TLT (Bond Market)	Watch closely	Fed not raising rates; letting free market set rates; if TLT bouncing → stocks stabilizing; if TLT dies → havoc; Trump likely to intervene if things get bad
Bitcoin	Neutral / leave alone	Sideways since Jan/Feb; got "whooped" in Dec/Jan; Greg wouldn't short above 60K
Gold	Dip buy	Hitting resistance; if down 2–3 days = dip buy opportunity; prior leap spread up 50%
Silver (SLV)	Breakout buy	Breakout buy over \$60; if breaks \$60 → likely goes to \$70 (+20%)
Dollar (DXY)	Bearish	Trapped in bear flag; breakdown → bullish for gold
Energy (XLE)	Strong / dip buy	Up 42% since Greg called it (at \$42–43); plus ~3% dividend; dip buy at \$61
Google (GOOGL)	Long-term like	Good spot now; YouTube bigger revenue than Netflix; not as AI-dependent as others
Netflix	B minus	Fair value \$100–110; currently ~\$77 (bought by "Aman" at \$74); 30–40% upside; risk off at \$65
Amazon (AMZN)	Long-term buy	Currently ~\$260; Greg thinks \$400–600 in 2–6 years (at least a double); coming into demand zone; dominating robotics
AMZU (2× levered Amazon)	Wheel strategy	Greg earns \$200/month on \$3,500 capital selling covered calls at 0.3 delta
Microsoft (MSFT)	Wait for dip	Currently near \$500; support at \$465 — buy shares there; call options need precision

Asset	Outlook	Key Level / Note
Service Now	Like	Price target \$160; retesting the box
Axon	Breakout	Was at \$415–420 when called; now at \$620
XLV (Healthcare ETF)	New all-time highs	Performing well
Medtronic (MDT)	Value + income	Called at \$78; now \$92 (+17.5%); pays 3.5% dividend
NBIS (Nebius Corp.)	Dip buy ~\$230	Revenue up 479% YoY; 15% annual margin; debt exceeds cash (\$5B debt vs. \$3.7B cash); Michael Burry is short; dip buy level \$230
KEEL (Keel Infrastructure)	Avoid / bearish	Sub-\$10 stock; revenue +72% but debt exceeds cash by \$101M; pump-and-dump pattern; fair value ~\$6
DTCR (Data Center ETF)	Long-term DCA	Greg long from \$26.50 (up ~7%); potential dip to \$24; likes it in 3–5 years
VALE (Brazilian Miner ADR)	Wheel candidate	12% dividend ; metals in rotation; good for weekly cash flow via covered calls

Greg's Top 3 ETFs (for most people): - **VTI** — Total world stock market, most diversified, slightly lower return than S&P 500, set-and-forget DCA - **VOO** — S&P 500 ETF; \$25/day → ~**\$3 million in 30 years** (historical projection, no guarantee) - **QQQ** — NASDAQ ETF; more risk, more reward; for younger investors with longer horizon

Greg's Top 3 Mag 7 Stocks: Google, Microsoft, Nvidia

Warning on leveraged ETFs (TQQQ, AMZU held briefly): - Leveraged ETFs decay over time — NOT for long-term holding - Example: stock drops 10% (\$10 → \$9), then rallies 10% (\$9 → \$9.90, not \$10) — the \$0.10 gap is decay, magnified on 3× ETFs - A market recovery to all-time highs could still leave TQQQ investors down 30–50% - Greg called out a "decent-sized podcast" for recommending TQQQ as a long-term hold — called it damaging advice

Victory Trades membership: ~\$99/month — daily trade alerts, live futures trading every morning, beginner courses, options and futures courses, Q&A on live stream; link in description

Closing Super Chats & Health Q&A 1:22:52

- **Sleep question** (from "Pursue Excellence" — working graveyard on weekends + full-time job, savings goal \$200K by December):
 - Brandon: "You need sleep — you'll literally go crazy without it"
 - Minimum **7 hours of sleep** required; if graveyard shift prevents that, it's not worth it
- **Peptide question** (from Chris — ECA vs. Tirzepatide for cuts; night hunger at 1–2 a.m.):
 - Brandon: "Talk to your doctor" (repeated multiple times — not medical advice)
 - Brandon has a Tirzepatide prescription; says it "took away my hunger 100%"

- Describes it as a "miracle drug" for appetite suppression
- He's not even cutting but likes staying on it to eliminate hunger entirely — just eats to maintain muscle mass
- **Shoutout to Elobo:** longtime viewer, on his **5th rental property**, in the greatest shape of his life
- Show airs every **Tuesday and Thursday at 5:30 PM Eastern**; next episode Thursday
