

7 Brutal Rules to Get Ripped and Rich in 90 Days EP 323

Channel: Brandon Carter · Published: Aug 14, 2026 · Watch: <https://www.youtube.com/watch?v=CiB1hs1tx74> Source: full transcript

Executive Summary

Brandon Carter outlines a 90-day protocol — covering walking, diet, lifting, and a three-month business-building roadmap — designed to simultaneously get you lean and generate your first income from a service-based side hustle.

-  Rule 1: Walk 20,000 Steps Per Day
-  Rule 2: Dial In Your Diet
-  Rule 3: Train Smart — Full Body Lifting
-  Rule 4: Start a Service-Based Business (3-Month Roadmap)
-  Rule 5: Remove Weaknesses & Eliminate Bad Habits
-  Rule 6: Schedule Every Hour of Every Day
-  Rule 7: Don't Take Your Foot Off the Gas

Intro & Sponsor — Fitness Revenue Roadmap 0:51

- Episode premise: change your entire life in 90 days — by Christmas you can have more money, a better body, and more financial abundance
- **Sponsor 1 — Fitness Revenue Roadmap** (free AI tool, link in description)
 - Takes ~4 minutes, ~9 questions
 - One question: how much money do you want to make per month
 - AI is trained on Brandon's 15+ years of online fitness business knowledge
 - Outputs a step-by-step roadmap ("like a GPS") with a timeline to hit your income goal
 - Built to help people grow an online fitness business to whatever their stated monthly goal is
- Student wins shared live:
 - **Louis**: 4 paid-in-full clients + 3 monthly clients at \$350 each → \$4,800 in new revenue last week; \$10K for the month by the 14th
 - **Big Will**: \$5,940 in the last 7 days; first month in the program, already over \$32K since August 8th

- **Unnamed student:** first-ever client booked in 10 days — closed on a 60-minute phone call
 - **Brian:** signed 3 people in one week, \$18K for the month so far
 - **Cory:** record month at \$45K
 - Sponsor 2 — "Thot Repellent" (satirical spray; joke segment)
-

Market Update with Young Candlestick (Greg) 0:440

- Greg trades live every morning in "Victory Trades" (link in description); had been offline for ~2 weeks due to a NinjaTrader software button issue after an update
- **Overall market view:** neutral to bullish into year-end
 - SPY at ~780; Greg's year-end price target ~800
 - Q1 dip was the only real dip; market went straight up then sideways through summer
 - Now exiting a bull flag — Greg is leaning bullish but notes choppy, alternating green/red days
 - Strategy in choppy market: focus on futures trading rather than directional stock plays
- **Nebius Group (NBIS)** — AI data center stock
 - Greg's top pick all year
 - Stock was up **40% in a single day** after earnings
 - Michael Burry went short at ~\$200/share; short squeeze contributed to the massive pop
 - Current price: ~\$255; Greg's price target: **\$350/share**
 - Caveat: extremely volatile — can move 20–30% in a single week; hard to size into
 - Members who sold cash-secured puts on NBIS locked in an instant **~30% gain in a month** (on significant capital, since selling puts requires buying power for 100 shares)
- **DTCR** — Data Center ETF (lower-risk alternative to NBIS)
 - Breaking out constructively
 - Greg wheeling 100 shares at \$29/share (~\$3K capital); generating ~\$100/month in premium
 - May get called away if it breaks above \$31
- **Gold**
 - Greg and Brandon both bullish on gold as a portfolio diversifier (relatively uncorrelated to equities)
 - Technical setup: big range compression → breakout on slight volume increase → buy calls
 - Victory Trades members made 200–500% on gold calls/spreads depending on expiration; the "peaceful setup" mentioned on the podcast returned ~60%
 - Short-term: let gold sell off 1–3 more days, then buy leap gold spreads (March/June next year) — buy a call, sell a call above it (spread strategy)
 - Dollar analysis: dollar in a bear flag; if dollar breaks down → gold higher; if dollar strengthens → pressure on both gold and stocks
 - Dollar/S&P inverse correlation: weak but real — strong dollar reduces incentive to hold risk assets; weak dollar drives money into stocks and hard assets

- **Google (GOOGL)**

- Greg's largest holding; bought more Google shares and December calls on the episode date
- Morningstar fair value: **\$580/share**; current price ~\$346 → implies ~**70% upside** per Morningstar
- Greg's fair value range: \$520–\$580
- Worst-case downside: 30–40% drop; Greg views this asymmetry as compelling enough to "plow into it with size"
- Note: Google owns **7% of SpaceX**; SpaceX forming a rounded bottom base (Greg won't buy SpaceX directly — prefers indirect exposure via Google)

- **Service Now**

- Greg called buying calls above \$120 when stock was at \$115
- Stock moved from \$120 to \$129 (~9–10% gain)
- Fair value: **\$160/share**; still ~20% upside

- **Microsoft**

- Greg: don't chase it at current levels; wait for a pullback to \$460–\$470 to add

- **TSM (Taiwan Semiconductor)**

- Greg took a long position above \$430; expects sideways consolidation short-term; likes it long-term

- **Nvidia**

- Trending higher; Greg suggests selling bullish credit spreads; likely stays above \$215 rest of year
- Brandon sold Nvidia too early before understanding the scale of the AI boom

- **GTA / Take-Two Interactive (TTWO)**

- Playbook: buy longs \$200–\$210 → sell into the GTA release date
- Stock rallied 20–30% following this strategy
- Greg suggests similar setup may play out for Apple into the September 9th event

- **Apple (AAPL)**

- Next Apple event: **September 9th** — iPhone 18, new Apple Watch Ultra 4, rumored foldable iPhone Ultra, possible MacBook Ultra (touchscreen, new M5 Ultra chip), Mac Studio
- Apple has been making its own chips since ~2000
- Options play: buy the 310 call / sell the 330 call December spread
- Typical pattern: stock grinds up into the event; first move at release is often not the real move

- **AI tool for trading — Claude prompt system**

- Greg uses Claude to predict the S&P 500 closing price
- Process:
 - Snip daily chart, 4-hour chart, 1-hour chart, 15-min chart, 5-min chart
 - Snip the options chain (showing volume and open interest)
 - Note the expected move (e.g., ±\$36)

- Submit all in one Claude query: "Give me the most likely closing price. Be dead accurate. Expected move is X. It is currently 10:06 a.m. CST. Market closes at 3:00 p.m. CST."
 - Best window: 10–11 a.m. Central (12–1 p.m. Eastern) — after the day's high and low are established
 - Results: Claude consistently predicts S&P closing price within **5–10 points**; Greg used it to buy dips and sell highs
 - Trade examples from the method: \$35 → \$450 (NDX lotto butterfly, zero DTE, 30 minutes); \$50 → \$220; iron condor → \$170 profit
 - Brandon and Greg discussed building an automated tool to pull chart screenshots automatically (Codex/Claude can open browsers)
 - **Macro concerns**
 - National debt at extreme highs; interest payments exceed military spending
 - Yield curve inversions have occurred; potential black swan risks
 - Passive index fund flows at all-time highs keeping the market bid
 - A real crash trigger would require mass 401k withdrawals or severe job market deterioration — neither currently present
 - Schiller PE ratio (cyclically adjusted PE) suggests S&P is expensive on a fundamentals basis, but market doesn't care
 - **Victory Trades wins shared**
 - Chase: \$300–\$500/day after one month of learning
 - JD Davis: **\$20K in a single month**; now has \$300K in Apex Trader funded accounts
 - Various members: \$85 (Palantir), \$432 (TTWO), \$1.7K (gold calls), ~\$1K (Service Now), multiple \$300–\$900 wins
 - All trading with Apex Trader funded accounts (not personal capital)
-

Rule 1: Walk 20,000 Steps Per Day 2:616

- Walking is Brandon's favorite form of cardio for body composition — not metaphorical, literally walking
- Why walking beats intense cardio:
 - High-intensity cardio stresses the central nervous system (CNS) and requires recovery, which diminishes weight room performance
 - Intense cardio depletes glycogen — needed for lifting
 - Goal is to build or maintain muscle while cutting; walking doesn't compete with those goals
- Why most people should cut first (not bulk):
 - If you are **15% body fat or above**, do not bulk — cut first
 - At 15%+ body fat, testosterone drops and estrogen rises; bulking in this state leads to more fat gain
 - You will immediately look better dropping to ~10% body fat
 - Fat loss happens fast naturally; muscle gain is slow — get the quick win first

- Leaner body = more insulin sensitive = better nutrient utilization when you eventually bulk → less fat gain during the bulk
 - **20,000 steps per day burns 800–1,000 extra calories**
 - Why not just eat 1,000 fewer calories instead? Because you need to keep protein high to preserve muscle — eating 1,000 less leaves little room for adequate protein and risks going "skinny skinny" instead of lean and muscular
 - Daily step game plan:
 - Morning: 30-minute walk → ~3,000 steps
 - After lunch: 30-minute walk → ~3,000 steps
 - After work: 1-hour walk (bring family/pets/friends) → ~6,000 steps
 - Remaining ~8,000 steps: during the workday, walk 10 minutes every hour (set an alarm)
 - Alternatives: walking pad at home/office; treadmill; trampoline park with kids
 - Brandon: "Everyone I've ever put on 20K steps a day got shredded — 100% of them, even if their diet wasn't perfect"
-

Rule 2: Dial In Your Diet 3:088

- Three components: high protein, caloric restriction, no weekend cheats

Protein - Target: **1 gram of protein per pound of current bodyweight** (not goal weight) - Example: a 300 lb person eats 300g protein — Brandon says this is completely fine - Brandon at 195 lbs regularly exceeds 1g/lb - Why high protein is optimal (not just sufficient): - **Thermogenic effect**: 20–30% of protein calories are burned off during digestion — roughly 2x carbs, 3–4x fats - Analogy: eating protein is like a credit card that gives instant cash back — if you eat 100 calories of protein, you only net ~70–80 calories - Protein keeps you fuller longer; carbs spike dopamine and run through you quickly ("eat Chinese food, hungry in 15 minutes") - Older men need even more protein because the body's ability to synthesize protein declines with age - Response to "you only need 0.8g/lb" argument: "The word 'need' is doing a lot of heavy lifting in that sentence" — this is about optimization, not minimum survival

Calories - Formula: **bodyweight in pounds × 10 = daily calorie target** - Example: Brandon at ~210 lbs → 2,100 calories/day; decreases calories as weight drops - Keep protein at ≥1g/lb even as calories drop; often ends up at 1.5g/lb because protein calories are partially offset by thermogenesis - Food approach on a cut: - At a steakhouse: choose filet mignon over ribeye - Rotisserie chicken: eat legs and drumsticks but strip the skin - Avoid low-protein, high-carb meals that leave you hungry

No Weekend Cheats - "Mediocre mantras" to eliminate: - "I deserve a day off" - "One day won't hurt" - "One meal won't hurt" - "You've been working out, you can have this" - > "The reason you find it difficult to stay consistent is because you accept inconsistency. Once you stop accepting inconsistency from yourself, consistency becomes easy." - "It won't help either" — are you trying to see how much you can get away with, or trying to be the best you can be? - The 90-day window is finite — after it's over, you can do whatever you want

Rule 3: Train Smart — Full Body Lifting 3:825

- Lift weights with **full-body workouts, 3–4 times per week**
 - Structure per session:
 - Pick 1–2 exercises per body part
 - 3–4 sets per exercise
 - Sessions should be done in **under 1 hour** (90 minutes max)
 - Rest between sets: **90 seconds maximum** (2 minutes absolute max)
 - Most people's gym sessions run long because of phones, TikTok filming, and socializing — eliminate this
 - **Supersets** to speed up sessions:
 - Pair opposing muscle groups back-to-back
 - Bench press → bent-over row or pull-up (chest + back)
 - Biceps + triceps superset
 - Rest 90 seconds, then repeat
 - Leg training: keep it simple — squats, leg press, lunges; no need to overcomplicate
 - Brandon's note: he trains more frequently than 3–4x/week but has ~27–30 years of training behind him; beginners/intermediate lifters do not need more volume than this
-

Rule 4: Start a Service-Based Business (3-Month Roadmap) 4:039

- Works whether you need a side hustle from scratch or want to accelerate an existing one

Why a service-based business? - The #1 reason businesses fail: they run out of capital - Product businesses require inventory, R&D, fulfillment, packaging — high upfront cost and overhead - Service businesses have **almost zero upfront cost and minimal overhead** - You can start alone, immediately - Examples of service businesses: - Video editing - Data analytics - Bookkeeping - Website design - Vibe coding - AI automations - Online fitness training (how Brandon made his first million)

Choosing a Niche — The Who/What/How Framework - A niche helps you stand out in a crowded market - Three questions to answer: - **Who** are you helping? (specific demographic) - **What** problem are you helping them solve? - **How** are you solving it? (your mechanism / secret sauce) - Brandon's own example: - Who: men ages 20–30 - What: get ripped - How: intermittent fasting + HIIT cardio - AI automation niche example: - Who: marketers - What: automate lead flow - How: set up AI agents - Why niching matters: - You cannot market to everyone — different demographics consume different content and respond to different messages - Examples: Coca-Cola runs different ads on BET Awards vs. Country Music Awards; Secret deodorant (women) and Old Spice (men) are owned by the same company (Procter & Gamble) with nearly identical ingredients but completely different marketing - Niche testimonials compound: when all your social proof features people exactly like your prospect, conversion is far easier than when testimonials are scattered across dentists, HVAC companies, and marketers - Free AI tool (link in description) helps fitness entrepreneurs identify their niche in ~3 minutes

Month 1 — Decide & Learn - Decide what your service business will be - Commit to and learn the skill as fast as possible - You do NOT need to be an expert — you only need to know more than your client and solve one specific problem - Reference: *Catch Me If You Can* — DiCaprio's character taught a university curriculum by reading one chapter ahead of students each day, despite never graduating high school - AI automation example tools to get proficient in: N8N, Claude Code, Grok, OpenAI, Hermes, etc. - **20 hours** of practice → reasonably proficient; **100 hours** → ready to work with real clients

Month 2 — Testimonial Harvest - Find **3–5 people or businesses** you can help for free for one month - Purpose: build credibility and social proof before charging - Brandon calls this the "**Testimonial Harvest**" - For fitness trainers: help 3–5 people lose fat for free; document their transformation with permission - If you're overweight yourself and want to be a fitness trainer: become your own first testimonial - At the end of the free month, if results are achieved: - Offer them a discounted ongoing rate (the only time to discount) - Many of these free clients become your first paying clients - Collect and save all testimonials — they are your primary marketing asset

Month 3 — Market, Post, Book Calls - Start posting content (can begin earlier if ready, but must be active by month 3) - Posting cadence: **2–3 times per day on all platforms simultaneously** - Tool: **Go High Level** (30-day free trial link in description) — upload video once, schedule to all platforms, customize caption per platform - Content strategy: **short-form content** for maximum reach - Lead magnet system: - Post content offering a free guide ("comment [word] to get it") - Go High Level auto-DMs the free guide to anyone who comments - Follow up: "Hey, I saw you downloaded the guide. What are your goals right now? What have you been struggling with?" - Book them on a sales call (Zoom) - Conversation targets: - Reach out to ~100 people/day to generate **20 real conversations/day** (a conversation = they respond back) - Goal: book **at least 1 sales call per day** - At this rate, you will close your first clients by month 3 even starting from zero - Use testimonials from the harvest as the primary content and proof in all outreach

Rule 5: Remove Weaknesses & Eliminate Bad Habits 5:744

- For the 90-day sprint (doesn't have to be forever):
 - Cut out bad habits
 - Avoid people who drain your energy
 - Get at least **7–8 hours of sleep** per night
 - Cultivate your environment for success
- Time audit — 168 hours in every week:

Activity	Hours/Week
Sleep (8 hrs/night)	56 hrs
Work	40 hrs
Lifting (1 hr × 4x/week)	4 hrs
Walking	~21 hrs
Subtotal	~123 hrs

Activity	Hours/Week
Remaining	~45 hrs
Family time	20 hrs
Left for business building	~25 hrs

- 25 hours per week is enough to build a business — you have more time than you think
- Key insight: if you don't have your own kids, you don't need to spend 20 hours on "family"; redirect that time

Rule 6: Schedule Every Hour of Every Day [6:028](#)

- The **ultimate cheat code** for productivity and habit elimination
- Action: plan every single hour of every day in your calendar — be strategic and specific
- Two outcomes of doing this:
 - **Dramatically increased productivity**: every person Brandon has coached who did this was shocked by how much they accomplished — more in one month than they'd done in the prior 90 days combined
 - **Bad habits automatically crowded out**: there's no room in a full calendar for gaming sessions, scrolling, or substance use — you simply won't have time
- Brandon has operated this way for years: shows a fully blocked calendar on screen
- "You don't have to do a dopamine detox. You don't have to do NoFap or any of the silly stuff. Just crowd it out. Get busy doing the real stuff."

Rule 7: Don't Take Your Foot Off the Gas [6:225](#)

- Month 1 will show visible progress — the danger is getting comfortable and easing off
- Cautionary analogy: a boxer who retired while still competitive said, "It's hard to get up and train when you wake up in silk sheets" — early success makes it tempting to coast
- "Good enough is the enemy of excellence. Good is the enemy of great."
- Push hard for the full 90 days — don't confuse early progress for arrival
- The mediocre mantras from Rule 2 apply here too: "I deserve a break" is how people fall off with two weeks left
- Commit to the full window — by Christmas (if starting now) you will have transformed your body and your income
