

How to Change Your Life in 30 Days [Money, Fitness, and Fame] EP 317

Channel: Brandon Carter · Published: Jul 21, 2026 · Watch: <https://www.youtube.com/watch?v=e4IPpdINAmY> Source: full transcript

Executive Summary

Brandon Carter ("Big Brandon Carter") walks through a three-part 30-day transformation system covering fat loss via AI-powered calorie tracking, stock market strategy from guest analyst "Young Candlestick," and a step-by-step framework for launching a profitable online fitness business using organic content and Go High Level automation.

- ❓ Audience Q&A

Why Getting Fat Is Dangerously Easy 0:49

- Brandon opens by framing fat gain as the **default state** in America — not a personal failing but an almost inevitable outcome of unchecked caloric intake
- Core mechanic: fat gain = consuming more calories than you burn
 - Every pound of fat = **3,500 calories**
 - Eating just **200 calories over maintenance every day for one year = 20 lbs of fat gained**
 - Even **100 calories over maintenance daily = 10 lbs of fat per year**
 - 200 extra calories is trivially easy to consume accidentally — "two bananas, an extra handful of nuts" or just sauces

- Example from his own tracking: a small portion of sugar-free honey mustard = **251 calories**
- Brandon lost **12 pounds (almost all fat) in 30 days** while maintaining muscle — face visibly changed
- "It's so easy to accidentally get 200 calories over maintenance. That's why so many people are fat."

Step 1: Track Calories & Macros with AI 6:36

- Brandon has tracked calories and macros for **20 years straight**, originally with notebooks (pre-iPhone era), then MyFitnessPal, now AI chatbots
- **Recommended tool: Claude (or ChatGPT)** with a custom prompt
 - He has a saved prompt that acts as a conversational macro tracker throughout the day
 - Workflow example:
 - Tell it what you ate ("50g blueberries, egg whites") → it returns calories + macros for the meal and a running daily total
 - Take a **photo of the back of a protein shake** → it logs it automatically
 - Ask "what do I have left?" → it tells you remaining protein, carb, and fat budget
 - Made a mistake (said "wings" instead of "legs") → Claude apologized and corrected the numbers
 - Weighed a Caesar salad (no croutons), photographed it → estimated macros added
 - Weighed a sauce at **200 grams → 251 calories** — a shocking revelation for most people
 - At end of day: input **Oura Ring calorie-burn data** → Claude calculates your exact daily deficit
 - Logs everything automatically into a **Notion database** via automation
- App to speak into phone instead of typing: **Whisper Flow**
- 27 years as a personal trainer: every client who started tracking was "shocked, flabbergasted, bamboozled" by how many (or few) calories they were actually eating
- **To get the prompt:** DM the word **"tracking"** on Instagram to **@KingKeto** (K-I-N-G-K-E-T-O) — automation sends it instantly

Step 2: The Ripped Roadmap (Free Calorie & Macro Calculator) 17:32

- Free tool Brandon built — link is in the video description
- **How it works:**
 - Input: sex, age (he used 43), height (6'2"), weight (used 200 lbs as example)
 - Upload a **photo of yourself** (shirt off for men; workout clothes or bathing suit for women) so AI can assess body fat percentage
 - Output example for Brandon at ~200 lbs:

Metric	Value
Estimated body fat %	~10%
Fat mass	20 lbs

Metric	Value
Lean mass	180 lbs
Goal body fat (shredded)	8%
Fat to lose	4 lbs
Goal bodyweight	196 lbs
Daily calories target	2,170
Daily protein target	200g

- **Why protein by total bodyweight (not lean mass):**
 - Thermal Effect of Food (TEF) — protein burns **20–30% of its own calories** in digestion
 - Carbs burn 5–15%; fat burns 0–3%
 - Eating 100 calories of protein → body only absorbs ~70–80 calories net
 - Even a 300 lb person should eat 300g protein — safe, and acts like a "cash-back card" on calories
 - Protein keeps you full longer; carbs spike dopamine and promote overeating
- After setting protein, you can freely slide carbs vs. fat to match your preference (keto, high-carb, balanced)
- Tool projects progress **week by week for 20 weeks** so you know exactly when you'll hit your goal
- **100% free**

Step 3: Accountability & Coaching 25:04

- Consistency is hardest when "nobody's watching but you" — consistency drops dramatically in isolation
- Options:
 - Share a ChatGPT food-log chat with a friend so both can monitor each other daily — Brandon does this with his girlfriend
 - Turn it into a **competition** between friends
 - Hire a **coach** who reviews your calorie log every day (most gym coaches don't do this — find one who does)
- Analogy: "Same reason you're more likely to go to the gym when your workout partner is waiting"
- "Those are the battlecries of the inconsistent... mediocre mantras."
- Do all three things (track, use the roadmap, get accountable) and "it's super difficult to fail"

Market Recap with Young Candlestick 28:56

- Guest: **Young Candlestick (Greg)** — camera not working, audio only

ADX Indicator & Market Conditions - ADX (Average Directional Index) = measures **trend strength**, not direction - High ADX → trending market with big moves - Low ADX → choppy, sideways market - Currently ADX is **as low as it can possibly get** → market is maximum choppy - Upcoming catalysts: Google earnings,

Microsoft earnings, Tesla earnings, Fed meeting next week - "Cash is a great position" — recommended parking spot: **SGOV** (short-term government bond ETF / money market equivalent)

Individual Stock & ETF Ideas - Microsoft (MSFT): Choppy short-term, long-term bullish - **Software sector (IGV):** Relatively weak — pairs trade idea: buy put debit spreads on IGV + call debit spreads on MSFT - Rationale: pick the winner within a sector while shorting the overall sector → removes need to time entry precisely - **Copper:** Greg added to position; will add more on a breakout above recent highs - Thesis: inflation is picking up and broadening - **Crude oil / XLE:** Bouncing from mapped support, approaching resistance; neutral-to-bullish; still a buy-the-dip environment - **XLF (financials):** Neutral-to-bullish, steady uptrend; useful as confirmation — if XLF is green alongside SPY, more confidence in bull trend; if diverging, stay in cash - **Semiconductors:** Better leading indicator than even MAG-7 stocks for where the market is headed — "dip and rip" pattern matching SPY closely - **TLT (20-year Treasury ETF):** "Backbone of the global economy" — if TLT breaks down, market likely sells off hard; if stabilizes, no red flags - **TBT (interest rate ETF):** Rising inflation → rising interest rates; worth considering borrowing now before rates climb further - **Inflation context:** Gas prices at **\$4/gallon national average**; copper and oil signaling inflation not done

Possible near-term scenario: - Potential sharp, fast sell-off this week or next, then a dip-buy back to midpoint or all-time highs - Key levels to watch: **SPY 740** (support — break below triggers sell-off); **SPY 755** (breakout = likely all-time highs quickly)

NEBX — "Free Money Glitch" Options Play - NEBX = double-leveraged ETF of NBIS → inflated option premiums - Example: with **\$1,900 in account**, sell a cash-secured put agreeing to buy 100 shares at \$19 → collect **\$600 premium instantly** - Break-even at \$13 = stock would need to drop **~60%** to lose money - Alternative: buy 100 shares + sell far OTM covered call → collect **\$700–\$800 premium** - Nearly getting **half your investment back in one month** just from premium - If stock goes sideways → keep selling the next month's option - Biggest risk: NBIS crashing 60–70% (considered unlikely in one month) - Greg's position: 3 contracts (~\$6,000 in) → **\$1,500 cash collected instantly** - *Not financial advice*

SpaceX Short Analysis - IPO principle: "IPO = It's Probably Overpriced" - SpaceX retested IPO price twice, bounced, then cracked lower - Greg fully exited shorts at **\$138**; recommends shorting bounces **until \$80–\$90/share** - Wouldn't touch it long above **\$100/share** - Fair value estimate: **\$25/share** — "anything above that is just Elon premium" - Only customer is the US government; revenues don't justify valuation - Suggested options play: sell the July 31 \$135 call / buy the \$140 call (bear call spread) if under \$135

Other Tickers Mentioned: - **MBIS:** Mentioned dip-buy at \$170 → **up 30% in 3 days** - **XBI (Biotech):** Pulling back, basing — keep an eye on it - **VKTX:** Wheeling strategy — buy 100 shares, sell OTM covered call for **\$50–\$100/week**; if called away = 10–15% gain in a week; 5% cash up front regardless - **Bitcoin:** "Dead money" — slowly grinding; opportunity cost has been high vs. gold, copper, XLE; Greg would short below \$60K; top-fish short setup with stop above \$69K - **Medtronic (MDT):** Fair value \$113; accumulation zone \$78–\$86; pays **3.6% dividend**; buy calls on break above \$86 - **Google (GOOGL):** Expected earnings move ± 20 ; long-term target 1-year: \$480; 2–3 years: \$580; building position before earnings - **Foreign markets:** Japan (EWJ) up 2.55% vs. S&P 1%; Emerging Markets up 2.8%; Latin America (ILF) up 1.3%, looks constructive above \$35; Short Yen (YCS) up 2% - **ASML spread:** \$35 cost → \$115 exit = **328% gain**; leveraging 100 shares with \$35 instead of \$168,000

Victory Trades community: Live trading calls, funded futures accounts, options plays — link in description

The market is maximally choppy right now — cash via SGOV is a legitimate position. Wait for the ADX to turn up or for key levels (SPY 740 or 755) to break before swinging big size.

The Attention Ladder — Building an Online Business in 30 Days [1:03:37](#)

- Brandon has made **over \$20 million online** and taught **over 15,000 people** to grow online fitness businesses
- Some students make **hundreds of thousands/year**; a handful have made **millions**; two have made **multiple millions per year**
- Framework: **The Attention Ladder** — 3 rungs; if any one fails, the whole system fails
 - Rung 1: Get Attention
 - Rung 2: Convert Attention to Leads
 - Rung 3: Convert Leads to Sales
- Key analogy: ads are like gasoline — pouring gas on a bare floor does nothing; pour it on an existing flame and you get an explosion. Build organic first, then add paid ads.

Step 1 of the Ladder: Getting Attention (10X Outlier / Niche Hacking Method) [1:06:26](#)

- Strategy: **10X Outlier Method** — find videos that have 10× more views than the creator has followers
 - Example: Coach Brody has 38,000 followers but a video with **6.5 million views** — perfect candidate
- **Tools needed:**
 - Chrome extension: **TikTok Sorter** — shows view counts and follower data on TikTok
 - Chrome extension: **Sort Feed** — provides extra data overlay on videos
 - AI chatbot: **Claude or ChatGPT** (Gemini also works)
 - Voice dictation app: **Whisper Flow**
- **Process (Niche Hacking):**
 - Step 1: Find a 10X outlier video in your niche
 - Step 2: Use the Sorter extension to **transcribe** the video
 - Step 3: Paste the transcript into Claude/ChatGPT
 - Step 4: Prompt the AI: *"I want to remake this video in my own words, with my own expertise. Interview me and ask me questions until you have enough of my knowledge to write this script without copying — just being influenced by it."*
 - Step 5: Answer the AI's questions (can use Whisper Flow to speak answers)
 - Step 6: AI writes the script in your voice
 - Step 7: Film, edit, and post
- **Music analogy:** Many songs share the same chord progression and key but have different lyrics, melody, and rhythm — that's why they're different songs. Same principle applies here.

- "You're not good enough to be creative yet. You got to earn that."
- **Posting frequency:** 2–3 niche-hacked videos per day
 - After 30 days = **60–90 videos posted**
 - "I promise you at least one of those is going to go viral"
 - Brandon's girlfriend **5X'd her following in 3 months** using this method; one video hit **5 million views** when she had fewer than 10,000 followers; she reposts that same video every 90 days
 - First 30 days: his girlfriend **doubled her following**
- **Platform strategy:** Post the **same video on Instagram, TikTok, and YouTube Shorts simultaneously** — don't test on one platform first; you don't know which platform will make a given video pop

Content Batching System 1:12:25

- Most people fail at volume because they do every step for every video one at a time: Plan → Script → Film → Edit → Post (×1 video). This is unsustainable.
- **Solution: Assembly-line batching over 5 days (targeting 14–21 videos)**

Day	Task	Detail
Day 1	Plan	Find 14–21 10X outlier videos; identify formats
Day 2	Script	Niche-hack all 14–21 — do the AI interview process for each
Day 3	Film	Shoot all 14–21 videos in one session (wear the same outfit — nobody notices)
Day 4	Edit	Edit 12–14 videos
Day 5	Schedule	Schedule all 14–21 posts in advance

- "This is literally the only way you can post a lot. If you try to do it one at a time, you will fail."
- Brandon used this method when he had multiple jobs and was posting **two long-form YouTube videos per day**

Scheduling with Go High Level 1:21:29

- **Tool: Go High Level (GHL)** — CRM Brandon has used for **8 years** to run all his online businesses
- **Free 30-day trial** available via link in description (normally only 2 weeks)
 - If you sign up through Brandon's link: get landing page templates, workflow automations, AI-built tools he demonstrated
 - GHL team will jump on Zoom with you to help implement everything
- **Scheduling superpower:**
 - Connect Instagram, TikTok, and YouTube accounts all in one place
 - Upload one video → schedule it to all platforms simultaneously with one click
 - Customize captions per platform if desired, but only one upload needed
 - Can also **schedule Instagram Story posts** in advance

- Real-world proof: Brandon posted on all platforms multiple times per day (including stories) during a **father-son Disney cruise** without ever opening social media — was fully present with his son

Step 2 of the Ladder: Converting Attention into Leads (Profit PDF Funnel)

1:32:15

- "Attention don't pay the bills. You can't pay your kids' tuition with views."
- Customer journey: Viewer → Lead → Customer

The Profit PDF (Lead Magnet) - At the end of every video, offer a free resource: "Comment 'macros' below and I'll send it right to you" - The lead magnet can be a cheat sheet, free guide, or interactive tool - GHL auto-DMs the link on Instagram when someone comments the trigger word

The Funnel (Two-Step Landing Page) - Page 1 — Opt-in page: - Simple form: name, email, phone number - Created in GHL (can be built conversationally using GHL's AI website/app builder) - Not everyone will fill it out — that's fine; you still have them in the DM - **Page 2 — Thank You / Video Sales Letter (VSL) page:** - Short video: congratulate them on downloading, mention the download button, then pivot to coaching offer - Deliberately minimal — only the video and two buttons (download + book a call) - No distractions on the page - **20–30% of people who opt in will book a call directly from this page** - The other 70–80% → you still have their contact info in GHL

Lead Pipeline in GHL - Organize all leads into a pipeline with these stages: - New Leads → In Conversation → Call Booked → Closed Won → Closed Lost → Follow-Up - GHL integrates natively with Instagram — message Instagram leads directly from GHL without opening the app - Critical when a video goes viral: leads in conversation won't get buried and lost in the notification flood - "If you have a small following, it's MORE important to nurture every lead — not less."

Follow-Up Automation ("The Dating Analogy") - New lead comes in → GHL auto-sends a text: "Hey, I saw you downloaded my macros cheat sheet. What are your goals right now?" - Text messages get answered far more than emails - Studies: **20–30% of online business revenue comes from email** alone (reason Starbucks, Target, Walmart, Costco all collect emails) - Follow-up sequence: auto-texts → auto-emails → weekly nurture emails → eventual sales call booking - "Keep following up until that person buys or one of y'all die." - Dating analogy breakdown:

Sales Step	Dating Equivalent
New follower	She gave you her Instagram
Comments trigger word, gets DM'd	You slide into her DMs
Opts into landing page (name/email/phone)	She gives you her phone number
Auto-text follow-up	You text her
Books a sales call	You set a date
Pre-call content sent	She saw a video of you doing something impressive
Closes on the call	You seal the deal

Quizunnel (Advanced Lead Magnet) - Built inside GHL using AI builder (similar to Lovable) - Ask users about their goals → deliver **custom, personalized results instantly** - Higher perceived value than a static ebook; gives immediate dopamine reward without requiring the lead to read anything - Leads to a VSL/booking page after completing the quiz - Brandon's example: "What's your primary goal?" → Lose weight / Beginner / inputs info → gets custom meal plan → sees coaching offer

📞 Step 3 of the Ladder: Making Sales (Pre-Call Sequence) 1:51:10

- Best mechanism for beginners: **one-on-one Zoom calls**
- "If you do enough things right before the sales call, the sales call should be easy."

4-Step Pre-Call Sequence: - **Step 1 — Send a pre-call video:** - Send longer-form content (YouTube video explaining your method + testimonials) between the time the call is booked and the call itself - Send it the day it's booked so they have time to watch it before the call - Indoctrinates them, answers common questions, reduces time spent explaining yourself on the call - Customize to match what the prospect wants (fat loss prospects → fat loss testimonials; muscle-building prospects → muscle-building content) - No testimonials yet? Use your own transformation story - **Step 2 — Never book a call more than 72 hours out:** - Longer booking windows = higher no-show rates - Set this restriction in your GHL calendar (works like Calendly but native to GHL) - **Step 3 — Send a confirmation text the day of:** - "Hey [Name], looking forward to our call today. Just confirming everything is still good on your end." - Reduces no-shows; re-engages people who may have forgotten - Can be fully automated in GHL - **Step 4 — Warm them up on social media in between:** - Like their posts, watch their stories, engage with their content between booking and call - "The only thing you can't automate" — do this manually - Dramatically increases show-up rate and buying probability

Follow-Up After the Call: - If they don't close on the call, that's not a dead lead — keep following up - Use GHL workflows to send follow-up texts and emails automatically - Entire pre-call sequence (video delivery, 72-hour cap, confirmation text) can be **fully automated in GHL** once set up

"If you do all these things in the next 30 days, I promise you, you will win. I have helped over 15,000 people grow successful online fitness businesses."

? Audience Q&A 57:35

- **Alex (GIS tech, multiple jobs/school):** Brandon recommends **online** fitness business over in-person — more money, more flexible, fits around existing schedule; live training on August 2nd to show exactly how
- **RA (loneliness while building a business):** Acknowledges real loneliness of entrepreneurship when your friends aren't as ambitious; suggests getting a pet (cat or dog) for companionship — Brandon had a cat named "George Clooney Carter" for years until his son was born allergic
- **Ben (restructuring content for different platforms):** "Post the same shit" — Brandon posts identical videos on Instagram, TikTok, and YouTube Shorts simultaneously; some videos will pop on one platform and flop on another, which is exactly why you post everywhere at once
- **Mr. Out of Context (Giannis on the Heat):** Brandon is excited; claims mutual connections with both Giannis and LeBron James; "been saving my LeBron reach out" — considers it a one-time card to play and

hasn't decided if now is the right moment

Upcoming Events Mentioned: - **August 2nd:** Free live training — how to make an extra \$300–\$500/day as an online trainer using AI; register via link in description - **Victory Talk Podcast:** Every Tuesday and Thursday at **5:00 PM EST** - Young Candlestick attending **Piper Sandler CMT conference in Minneapolis** on Thursday — will report back on big money managers' picks and market forecasts
