How Many DMs It Takes To Make 30K

Channel: Brandon Carter · Published: Oct 25, 2026 · Watch: https://www.youtube.com/shorts/R4rMZm07PeI Source: full transcript

📋 Executive Summary

Brandon Carter presents a reverse-engineering formula: start with your monthly revenue goal and divide down through close rate, show rate, and booking rate to find the exact number of DMs to send daily.

- 🔢 The Revenue-to-DMs Formula

🔢 The Revenue-to-DMs Formula 0:00

- **Core idea:** Work backward from your revenue goal through each conversion layer to land on a concrete daily DM target.
- The formula is a chain of five divisions — each step its own calculation:
  - Step 1: `Goal Revenue ÷ Price` = number of **sales needed per month**
  - Step 2: `Sales Needed ÷ Close Rate` = number of **calls needed per month**
  - Step 3: `Calls Needed ÷ Show Percentage` = number of **calls to book per month**
  - Step 4: `Calls to Book ÷ Booking Rate` = number of **DMs needed per month**
  - Step 5: `DMs Needed ÷ 30` = number of **DMs to send per day**
- The end result tells you (or your setter) exactly how many DMs to send every single day to hit your revenue goal.
- This approach removes guesswork — every metric in the chain is a known or trackable number specific to your business.
- The title references $30K as an example revenue goal, but the formula applies to any target.
