I Didn't Edit a Single Second of This Video

Channel: Brandon Carter · Published: Oct 15, 2026 · Watch: https://www.youtube.com/shorts/NBNcGUCFlwo Source: full transcript

📋 Executive Summary

Brandon Carter demonstrates using Claude AI as a hands-off video editor — trained once on his personal style — to produce 12+ long-form YouTube videos and 20+ Instagram Reels in two weeks without touching an editing timeline.

📑 Contents

- 🎬 The Core Demo: Claude Edits Live On-Screen
- 🎓 Teaching Claude His Style
- 🗂️ Claude Knows His Entire Hard Drive
- ✂️ Handling Mistakes and Automation Edge Cases
- 💰 Cost and Workflow Conclusion

🎬 The Core Demo: Claude Edits Live On-Screen 0:00

- Brandon opens by stating he did not edit a single second of the video himself
  - He shows Claude doing it live, issuing voice/text prompts on screen
  - Commands demonstrated:
    - "Captions" — Claude adds captions automatically
    - "Now make it look expensive" — Claude applies a polished visual treatment
    - "Now zoom in" — Claude executes a zoom cut
- Output scale achieved in the last two weeks:
  - **Over 12 long-form YouTube videos** published
  - **Over 20 Instagram Reels** published
  - He has not touched a timeline once during this period

🎓 Teaching Claude His Style 0:05

- Brandon emphasizes this is the part "nobody shows you"
- He did not just type a generic prompt — he onboarded Claude the way he would a new human editor
  - Taught it his specific cuts, caption style, and music preferences
  - This was a one-time setup process

- After that single training session, Claude applies his style consistently to every subsequent video without re-instruction

🗂️ Claude Knows His Entire Hard Drive 0:20

- Claude has been given access to and awareness of his full local clip library
  - **5,759 total clips** on his hard drive
- Demonstrated use case: "Find the one where I'm swimming with the pigs"
  - Claude locates the correct clip from among thousands
- Claude also retains memory of social/personal context:
  - It remembers which clips feature people he does not want to post
  - Instruction given: "Never use those" — Claude respects that boundary going forward

✂️ Handling Mistakes and Automation Edge Cases 0:40

- When Brandon stumbles on a line mid-recording (demoed with filler sounds: "uh, uh"), he simply says "cut that"
  - Claude automatically removes the flubbed section
- Claude also automatically bleeps profanity/mistakes — shown as a feature he highlights positively
  - Quote: "This thing is ridiculous"

💰 Cost and Workflow Conclusion 0:48

- Traditional editors charge per video — an ongoing, scaling cost
- Claude is **included in his existing Claude subscription** — no per-video fee
- Final step in the workflow is simply: "Post it"
  - The video is fully edited and published without Brandon ever touching it directly

> The key insight is not the AI itself but the one-time style training — once Claude knows your cuts, captions, and music, it operates as a permanent, on-demand editor at subscription cost rather than per-video rates.
