I Edited This Video Without Touching It

Channel: Brandon Carter · Published: Oct 15, 2026 · Watch: https://www.youtube.com/shorts/sJZJgY2PKDc Source: full transcript

📋 Executive Summary

Brandon Carter shows how he uses an AI editing tool (Claw) to fully edit videos hands-free, having trained it once on his personal style — cuts, captions, and music — enabling massive content output with zero manual timeline work.

📑 Contents

- 🎬 Live Demo: Editing a Video Without Touching It
- 🧠 The Key: Teaching It Your Style
- 🗂️ Full Clip Library Awareness
- ✂️ Automatic Error and Language Cleanup
- 💰 Pricing and Tool Reveal

🎬 Live Demo: Editing a Video Without Touching It 0:00

- Brandon opens by demonstrating a fully voice/prompt-driven editing workflow in real time
  - Commands shown on screen include: "Captions," "Now make it look expensive," "Now zoom in"
  - Each command is executed instantly without him touching the timeline
- Result of this workflow over the last 2 weeks:
  - **Over 12 long-form YouTube videos** published
  - Over 20 Instagram Reels published
  - Zero manual timeline edits made

🧠 The Key: Teaching It Your Style 0:12

- Brandon emphasizes the part "nobody shows you" — it's not just about typing a prompt

> "I didn't just type a prompt. I taught it my style the same way I would a new editor."

- He trained the AI once on three core elements:
  - His cuts
  - His captions
  - His music

- After that one-time setup, the tool replicates his style automatically on every future edit

🗂️ Full Clip Library Awareness 0:24

- The AI has indexed his entire hard drive of footage
  - Total clips known: **5,759**
- He can retrieve any clip with a natural language prompt
  - Example: "Find the one where I'm swimming with the pigs" → clip is found immediately
- It also respects content preferences and privacy rules he has set
  - "It even remembers clips I have with people I don't want to post. Never use those."

✂️ Automatic Error and Language Cleanup 0:36

- The tool handles on-the-fly mistakes during recording without manual intervention
  - Demo: Brandon stumbles — "like uh I uh" — and says "cut that" → the flub is automatically removed
  - It also automatically bleeps profanity/language he wants censored
- These features remove two of the most time-consuming parts of traditional editing

💰 Pricing and Tool Reveal 0:48

- The tool used is called **Claw**
- Pricing model: included as part of a Claw subscription (not charged per video, unlike human editors)
  - "Editors charge by the video, but mine is included in my Claw subscription."
- Video ends with the clip being posted, fully edited, with Brandon having never touched the timeline
