

Let AI Execute Your Ideas Without Outsourcing Your Ability to Think

Channel: Brandon Carter · Published: Sep 22, 2026 · Watch: <https://www.youtube.com/shorts/Q9JGTRabDHE> Source: full transcript

Executive Summary

Brandon Carter argues the best use of AI is as an executor, not a thinker. Keep ideation and creativity human, then hand off production tasks to AI to avoid atrophying your own creative muscle.

Contents

-  The Core Philosophy: AI Executes, You Think
-  The Risk of Outsourcing Creativity
-  How Brandon Actually Uses AI in Practice
-  Preserving the Human Element

The Core Philosophy: AI Executes, You Think 0:00

- The preferred model: **you do the thinking, AI does the executing**
 - AI can occasionally help generate ideas, but the majority of thinking should remain yours
 - AI is most valuable as a production tool, not a creative director

The Risk of Outsourcing Creativity 0:00

- If you outsource 100% of your creativity and thoughts to AI, your "creativity muscle" will atrophy
 - Like any unused muscle, it gets weaker over time
 - The result: you get worse at thinking and creating, not better
- Even when AI is involved in ideation, he still ensures he does the majority of the thinking himself

How Brandon Actually Uses AI in Practice 0:22

- Workflow for this specific video:
 - Walked around and talked to **Claude**, explaining what he wanted to cover
 - Claude organized his spoken words into a script — but the words and ideas were his own
 - **ChatGPT Arista** then created the slide deck from the script
 - After filming, dumped the finished video straight into **ChatGPT Arista in Codex** for editing
 - Edited video was then posted directly

- Key distinction: the script was built from *his words*, not AI-generated content

Preserving the Human Element 0:47

- Even with a script available, he deliberately freestyles during delivery
 - "I'm freestyling right now. Everything I'm saying is not in the script."
 - Reading a script verbatim removes the humanity from the video
- The goal is to keep the human, unscripted quality intact in the final output

The line he draws: AI handles tasks *for* him, never the thinking *itself*.
