

Get Your Body and Bank Account Right This Summer

EP 307

Channel: Brandon Carter · Published: Jun 17, 2026 · Watch: <https://www.youtube.com/watch?v=5EZaF9YzXIA> Source: full transcript

Executive Summary

Brandon Carter presents a three-rule summer blueprint — track every calorie burned and consumed (using AI), identify and work four daily hours on your single highest-leverage task, and schedule every hour in Google Calendar — promising ripped body and significantly more income in 90 days.

Contents

-  Intro, Sponsors & Episode Setup
-  Why Summer Is Your Window: The Ant & the Grasshopper
-  Rule 1: Track Everything That Matters
-  Rule 2: Stop Working on Bullshit — Focus on the One Thing
-  Rule 3: Live Out of Your Calendar
-  Market Recap with Young Candlestick
-  Super Chat Q&A

Intro, Sponsors & Episode Setup 0:35

- Victory Talk Podcast, Episode 307; host: Brandon Carter (a.k.a. "Big Brandon Carter," "King Keto," "Gymnasium Jesus," "Unimus Prime")
- Co-host and chat moderator: Mo Novia (DJ Chita Grande) — handling haters in live chat
- Three sponsors announced during intro:
 - **Free live training — Sunday, June 28th**
 - Topic: how to grow an online fitness business using AI
 - Brandon claims first million made as an online trainer; "tens of millions" total career earnings online
 - Has taught over 15,000 people to grow online fitness businesses
 - Notable alumni mentioned: Austin Dunham, FedEx Fearless, Corey Armstrong
 - No experience or prerequisites required; will cover AI tools for content creation and monetization
 - Register free via link in description
 - One-on-one online coaching with Brandon
 - Apply via the second link in the description
 - After applying, you get an automated text message — you must respond or Brandon ignores you

- If you respond, he engages personally to discuss your goals
- "Thought Repellent" — a satirical product (spray) to "keep thots away"
 - Aiming for 4th of July launch; needs super chat revenue to fund distribution
 - Backup timeline if funding falls short: January

Why Summer Is Your Window: The Ant & the Grasshopper 8:29

- Core premise: you have 90 days this summer to get ripped and dramatically grow your income — don't waste it
- Common failure mode: taking actions that look like progress but are actually just "motion"
 - Eating "healthy" smoothies and nuts while never tracking calories → still getting fat off expensive food that doesn't even taste good
 - Business: spending months picking a name, designing a logo, or "figuring out where to start" instead of getting clients
- The Ant & Grasshopper story as framing:
 - Grasshopper played all summer; told the ants they were crazy for working; ants kept grinding; winter came — grasshopper died, ants thrived
 - Brandon's version: "The ants were laughing at him. That's why you dead."
 - Moral: summer is the time to build, not coast; people who give up by summer spend winter wishing they hadn't
- Brandon's Disney cruise observation: saw multiple dads at the pool with shirts on, looking out of shape in front of their kids — "that's what your child has to look up to"
- Three rules that guarantee ripped-and-rich results by end of summer:
 - Rule 1: Track everything that matters
 - Rule 2: Stop working on BS — focus on the thing that actually moves the needle
 - Rule 3: Live out of your calendar

Rule 1: Track Everything That Matters 12:23

- **Fat loss is pure math: burning 3,500 calories = losing 1 lb of fat**
 - 500-calorie daily deficit × 7 days = 3,500 cal = 1 lb fat lost per week
 - 1,000-calorie daily deficit = 2 lbs fat lost per week
- Part A — Track calories burned (use a wearable device):
 - Options: Apple Watch, Oura Ring, Garmin, Whoop
 - Brandon's current preference: Oura Ring — blends seamlessly into all attire (gym, weddings, casual, suits)
 - Used Whoop previously but says it looks like "spy kids" or a "cyber bully" when worn with formal clothing
 - Samsung Watch: joked no documented cases of men wearing one and having sex

- Caveat: none of these devices is 100% accurate, but they provide a useful calibration range
- Part B — Track calories consumed (use AI instead of just MyFitnessPal):
 - Brandon used MyFitnessPal for over a decade; now experimenting with Claude AI
 - Also works with ChatGPT; Claude's unique advantage is native Apple Health integration
 - Setup steps:
 - Load a custom long-form prompt into Claude (DM Brandon the word "tracking" on Instagram to receive the exact prompt and instructions)
 - Throughout the day, type what you ate OR photograph your meal and upload the image
 - Claude estimates macros and calories; provides a running daily total of calories consumed, calories burned, and current deficit or surplus
 - Claude reads Apple Health data directly (slight lag noted) OR you can upload a screenshot from your Oura Ring app for more accuracy
 - Real examples Brandon described from his own use:
 - Typed "4 oz Denver omelette + 2 oz salmon" → got macros and a running deficit of 561 cal for the day
 - At a dark catered barbecue where weighing food was awkward: photographed two plates of vegetables → Claude estimated portion sizes and calculated macros
 - Photographed a nutrition label → Claude read it and updated running total automatically
 - Meal with habachi sauce → just told Claude verbally; handled better than MyFitnessPal (which struggles with cooked-in sauces)
 - End of catered-event day: 2,000 cal consumed / 240g protein; burn reading seemed low → uploaded Oura Ring screenshot → revised deficit to 940 cal
 - Brandon's verdict: "This might be the new wave. I'm going to experiment a few more weeks before fully switching from MyFitnessPal."
- The science backing up just tracking:
 - Duke University study: participants given MyFitnessPal and told only to track — no diet plan, no workout plan — lost an average of **5 pounds in 3 months**
 - Mechanism: seeing your actual intake in real time naturally steers you toward better food decisions
 - Brandon's 27 years as a personal trainer: every client who starts tracking is "amazed" at how many calories they're actually consuming (or, for skinny guys trying to bulk, how few — often only 1,500 cal/day)

- Your daily targets (simple starting formula):

Metric	Formula	Example: 200 lb person
Daily calories	Body weight (lbs) × 10	200 × 10 = 2,000 cal
Daily protein	Body weight (lbs) × 1 (grams)	200 × 1 = 200g protein

- Notes on the targets:

- First-year trainees: hitting these numbers can simultaneously build muscle AND burn fat ("newbie gains" — only possible naturally in your first year of serious training)
- Experienced trainees: the protein target preserves hard-earned muscle while cutting so you don't lose it
- Brandon personally (200 lbs, keto): eats 2,000 cal/day, 200–240g protein, keeps carbs under 50g
- "Diet is the most important thing. You can't out-train a bad diet, but you can out-diet bad training."
- Optional workout protocol (adds to results but is not required for fat loss):
 - 30–60 minutes of steady-state cardio per day — low intensity, conversational pace; walking, exercise bike, elliptical all qualify
 - 3–4 full-body resistance training sessions per week; 1–2 exercises per body part; 3–4 sets each

🎯 Rule 2: Stop Working on Bullshit — Focus on the One Thing 32:16

- Concept source: book **"The One Thing"** by Gary Keller
 - Keller was worth hundreds of millions when the book was written (~20 years ago; likely a billionaire now)
- The book's core question: *"What is the one thing that, if you accomplished it, would make everything else easier or unnecessary?"*
 - Apply this question to your specific financial or career goal
- The rule: work exclusively on that ONE thing for **4 focused hours per day**
 - Notifications off, zero distractions — this must be deep, intentional work
 - Studying, reading books, and watching YouTube do NOT count toward the 4 hours
 - "I'm not saying don't do those things, but they don't count for this four hours."
- Brandon's personal example:
 - His one thing for making his first million: content creation
 - Read the book, then dedicated 4 hrs/day to making content — "and I still do it now"
 - Content creation made everything else (client acquisition, sales, reputation) easier or unnecessary
- Scheduling flexibility:
 - Does not need to be 4 consecutive hours (2 hrs morning + 2 hrs evening works fine)
 - Doesn't need to be exactly 4 hrs every day — just average 4 hrs/day across the week
 - Missed a day? Compensate: do 6–8 hrs on Saturday or split it across the weekend
- The guarantee: "If you put in four hours a day on this, you will not fail. I promise you will succeed."
- Why most people fail anyway: they do it inconsistently, or they "do it" but with notifications on and attention split

"Work on the one thing that makes everything else easier or unnecessary. Four hours a day. You will not fail."

📅 Rule 3: Live Out of Your Calendar 36:58

- Core argument: "When people say 'I don't have time,' that's BS. You're just not using it effectively."
- Recommended tool: **Google Calendar** — the only calendar Brandon recommends
- Two types of tasks to manage:
 - Recurring tasks: things done regularly on a schedule (sleep, work, gym, meals, family time)
 - One-time tasks: things done once (e.g., DM Brandon for the tracking prompt)
- How to build your optimized weekly calendar (demonstrated live):
 - Step 1 — Lock in **sleep**: e.g., 10 PM–6 AM; set as daily recurring event; consistent times regulate circadian rhythm
 - Step 2 — Lock in **work**: e.g., 9 AM–5 PM; set to repeat every weekday
 - Step 3 — Lock in **commute**: budget 1 hour each way maximum; "If your commute is more than an hour, you need to move"
 - Step 4 — Lock in **workout**: 1 hour block; set as daily recurring; Brandon recommends early morning
 - Step 5 — Lock in **family time / date night**: e.g., Tuesday recurring (color-code it pink); "Date night should lead to bed — that's how it should work"
 - Step 6 — Schedule **One Thing blocks**: fill remaining white space with dedicated deep-work sessions
 - Example math from Brandon's live demo: 16 hrs of One Thing time across Monday/Wednesday/Thursday + 6 hrs Saturday + 6 hrs Sunday = 28 hrs ÷ 7 days = **4-hour daily average achieved**
- Cardinal rule: **"There should be NO white space in your calendar. White space is the devil."**
 - Even leisure and free time should be intentionally labeled and scheduled
- Hidden bonus — automatic bad habit elimination:
 - When every hour is planned, bad habits simply never get calendared, so they don't happen
 - Brandon quit weed and alcohol 11 years ago not by trying to quit, but because "Call of Duty weed-smoking sessions never made it into the calendar — so they never happened"
 - "That's a cheat code."
- Excuse rebuttals:
 - Kids: "Your kids should be your motivation, not an excuse. I hate when people say 'I used to be in shape but then I had kids.' I hope your children never hear you blame them for your failures."
 - Use kids actively: trampoline parks, water gun fights, swimming — Brandon burned "tons of calories" doing kid activities on his Disney cruise and at a neighborhood barbecue
 - Girlfriend cooking bad food: "It's still your responsibility what you put in your mouth. Just because it's there doesn't mean you have to eat it."
- Real-world promise: "Everybody I know who lives out of their calendar — in 90 days, their whole life changes. I've never seen it not happen."
- Caveat for beginners: you'll misjudge how long things take at first — just keep sticking to it and you'll calibrate
- 90-day compound outcomes from all three rules applied consistently:

- More disposable income
- Accelerated career and business progress
- Higher mental drive and confidence
- More respect from family and friends
- Better physical appearance, more energy, improved health, longer lifespan

Market Recap with Young Candlestick 58:29

- Guest: "Young Candlestick" — Series 65 licensed trader; co-host of Victory Trades
- Brandon requested a 90-day market forecast after being "off the grid" for a week (Disney cruise)
- **Overall market stance: neutral — "whole lot of nothing"**
 - Market was oversold → bounced → now slightly overbought
 - Not expecting huge upside trends or major sell-offs as the base case
- Key macro events driving uncertainty:
 - Trump peace deal signed Sunday → crude oil sold off hard immediately
 - SpaceX IPO launched (stock: \$149 → \$225); options on SpaceX now open but extremely expensive
 - FOMC meeting next day with new Fed chair Worsh — Worsh wants to raise rates
 - Higher rates = harder to borrow, slower business growth, but cost of living should gradually fall
 - No rate cuts priced in for the entire year
 - Young Candlestick: "It's basically like an earnings report — market will spike up or down in reaction"
- Index and sector rundowns:
 - S&P 500: big up day prior, pulling back slightly
 - IWM (small caps): stair-stepping higher but showing a possible rising wedge; "cracks in the armor" — if it loses prior all-time highs, that would be bearish for the broader market
 - Semiconductors: had a major down day (–5%) but had been on a very strong run; may see more softness/weakness in coming weeks

Asset	Candlestick's View	Key Detail
NBIS (Nebius — AI data centers)	Bullish	Being added to NASDAQ 100 / QQQ; flagged on prior episode near \$215; now near all-time highs (\$278 breakout level); up 210% year-to-date
Crude Oil	Cautious	Peace deal pushed it down; chart looks like a rounding top; could fall to ~\$60/barrel; gas prices unlikely to go below \$3/gallon nationally, possibly ever
Bitcoin	Neutral/Weak	Lower lows, dead cat bounce; "not really doing too much"
VIX	Watch	Big spike, came back down; forming a small bottom → short-term market sell-off possible

Asset	Candlestick's View	Key Detail
Google	Bullish	Up 20% YTD; near highs; Young Candlestick bought more today; Brandon's proxy for SpaceX exposure (Google owns 7% of SpaceX)
Apple	Neutral	Little off all-time highs; doing well
Meta	Neutral/Weak	Still well below all-time highs; stuck in consolidation
Netflix	Wait	Bleeding since last earnings; fair value ~\$120/share (currently ~\$78, so ~50% theoretical upside); trend is weak and bearish; Young Candlestick would wait for bounce to ~\$85 and a new chart formation before buying
Microsoft	Weak	"Out of rotation, out of favor"; Young Candlestick bought at \$390, averaged up at \$400; currently down; SpaceX passed Microsoft in market cap within its first 3 trading days
Caterpillar (CAT)	Bullish	Breaking out to all-time highs; featured industrial stock pick
TSM (Taiwan Semiconductor)	Strong Buy	Favorite semiconductor stock; building large plants; target \$1,000/share in 3 years (currently ~\$425); "reliably double your money in 3 years"; pays a dividend while you wait; sells monthly bullish put credit spreads
SpaceX (SPCX)	Complex	Options available but priced for extreme volatility; Young Candlestick prefers selling bullish put credit spreads at \$175 strike into Friday; risk \$450 to make \$50 with ~90% probability of profit; gamma squeeze possible if stock breaks all-time highs

- Iran deal discussion (Brandon brought it up):
 - Trump deal: potentially giving Iran access to \$300 billion vs. Obama's \$1.7 billion deal — Brandon displayed both figures on screen: "200x more"
 - Brandon: not claiming political expertise but noted the irony of Trump previously condemning large financial benefits to Iran
 - Costs to Americans: higher gas prices (gas below \$3/gallon nationally may "never happen again"), plus direct military costs and American lives lost
 - Young Candlestick: "If someone beats you in a fight and then asks you for \$300 billion to stop... I'd feel like I lost."
- Tesla / X / SpaceX merger speculation: rumor they may merge all three entities under a single stock ticker "X"
- Day trading rule change highlighted: PDT (Pattern Day Trader) rule no longer requires \$25,000 minimum; most brokers now allow unlimited day trading with just \$2,000 in a margin account; caveat — just because you can doesn't mean you should; wait for quality setups
- Victory Trades member wins shared:

- HIMS breakout trade (flat top above \$30 → buy calls on break): one member made \$200 in one day = two months of subscription paid for in one trade
- Another trade: \$99 → \$550 (455% gain)
- Member Simus made \$837 on a funded account
- Young Candlestick scalped a 123% gain on a put (\$97 in → \$217 out)
- Young Candlestick trading FOMC live twice the next day ("I'll either get my ass whooped or make a ton of money")
- Victory Trades: trade alerts + options trades sent to phone daily; live futures trading every morning; link in description

Super Chat Q&A 1:17:54

- **Disney cruise recap (Dream Hopper):**

- Just Brandon and his son — father-son Carter Boy trip, no one else
- Son said at the end of one day: "Dad, I think today was one of the best days of my life"
- Brandon: "That's what we do it for" — compared the feeling to Jaylen Brunson winning the NBA championship
- Stayed fully active: swimming with dolphins, running around the ship, water gun fights at a later barbecue
- Son went to the kids' club ("Oceaner Club") once, didn't want to go back — just wanted to hang with dad

- **Book recommendation (Alexander — already read Rich Dad Poor Dad and Atomic Habits):**

- Recommendation: **"Awaken the Giant Within" by Tony Robbins**
- Top-5 book Brandon has ever read; described as a thick physical book
- Critical warning: do NOT get the audiobook — "it's an abridged version, it's a sham, the content is different"
- Must read the actual physical book in full

- **Keto + caffeine + appetite suppression success story (Jesse):**

- Jesse followed Brandon's advice: went keto, used caffeine and "Bronate" (Brandon supplement), sustained 1,000-cal deficit, dropped from 19% body fat to nearly 10% — not hungry at all
- Brandon's take: compares this favorably to GLP-1 drugs like Ozempic/Semaglutide — "we already had that, it was called ephedra"
- Ozempic face explained: the drug works so well at crushing appetite that people under-eat overall, losing muscle mass including in the face — causes gaunt, hollow facial appearance ("start losing volume and looking like this")
- Brandon mentioned he plans to personally test Retatrutide ("Rea") and report back

- **Trading as your "one thing" (Stephen):**

- Brandon's personal story: used NinjaTrader to download historical market data and practice-traded his strategy on random past days (so he didn't know the outcome in advance)
- Practiced during the session open each time; tracked hours meticulously
- After exactly **200 hours of simulated practice**: received first payout from Apex Trader Funding — approximately **\$50,000**
- Key insight: "Traders say they practice but most don't actually practice. I practiced exactly 200 hours. You have to actually do the thing."
- **Body composition question (Martin — 6'6", 265 lbs, down from 298, no definition except traps):**
 - Brandon's diagnosis: still carrying a lot of body fat; definition = low body fat, not more muscle
 - Men store the most fat cells in the stomach (hence the "Bart Simpson build" / beer gut); women store more in hips, glutes, and chest
 - Prescription:
 - Max 3,000 calories per day
 - Up to 300g protein per day
 - Just needs to reduce caloric intake — "you're eating too many calories, that's all it is"
 - Track with Claude AI or ChatGPT; photograph meals and upload when weighing isn't practical
- **60-lb weight-loss goal (Mike — 260 lbs → 200 lbs by December, ~24 weeks):**
 - Brandon's math live: 1,000-cal daily deficit = 2 lbs fat/week × 24 weeks = ~48–50 lbs (just under 60)
 - To close the gap and hit 60 lbs: 1,000-cal deficit every day PLUS one 24-hour fast per week
 - On keto: ketosis produces natural appetite suppression from ketones, so many people end up in a deficit automatically — but keto is not magic; Brandon himself gained body fat eating 4,000 cal/day on keto during a winter bulk
 - Bottom line: "I don't care if you're keto, vegetarian, or pescatarian — you still have to burn more calories than you consume"
- **FX trading improvement (Mike follow-up):**
 - Same answer as for any trading or skill: practice with historical data
 - NinjaTrader allows downloading historical data; unsure if it works natively for Forex pairs
 - Whatever pair you trade: download historical data, set it to your trading session's open, and simulate live
 - "Practice if you want to be good at anything"
- **Shoutout — guitar teacher building his business (Andre, down 195 → 181 lbs, heading to 170):**
 - Brandon recognized him as the YouTuber who reviewed the PRS Silver Sky SE guitar
 - Andre's review convinced Brandon to buy the SE (standard quarter of the price, essentially same quality) — saved Brandon approximately \$2,000
 - Andre confirmed he has a PhD — "Black Excellence, shoutout to him"
 - Brandon's guitar note: had his PRS Silver Sky SE modded with a pickup switch modification that converts the first two single-coil pickups into a humbucker sound; costs roughly \$100; "it's lit"

- **Martin progress update (longtime commenter, current stats):**
 - Current weight: 253 lbs; calories: 2,600/day; protein: 253g/day
 - Exercise: 20 min Stairmaster daily + 20 min dry sauna + "get-up shots" + lifting
 - Brandon: "Sounds like you're on the right path — keep up that momentum"
- **Closing reminders:**
 - Victory Talk Podcast airs every Tuesday and Thursday at 5:00 PM Eastern
 - Free live training: **June 28th** — full breakdown of how to grow an online fitness business with AI; Brandon will be live and answer all questions; link in description
 - One-on-one coaching spots open for summer: apply via second link in description; must respond to the automated text message or you will be ignored
