

Get Your Body and Bank Account Right This Summer EP 307

Channel: Brandon Carter · Published: Jun 17, 2026 · Watch: <https://www.youtube.com/watch?v=5EZaF9YzXIA> Source: full transcript

Executive Summary

Brandon Carter lays out three actionable rules — track everything, work only on your highest-leverage task, and live from your calendar — to get shredded and significantly increase income over the next 90 days.

Detailed Breakdown

• Intro / framing

- Episode 307 of Victory Talk podcast; co-host/moderator Mo Novia DJ Chita Grande on chat
- Central premise: you have 90 days to make real change — don't waste the summer like the grasshopper in the fable

Most people stay fat and broke because they take actions that *look* like progress (motion) but don't actually move the needle

Sponsors / promos mentioned

- Free live training: **June 28th** (Sunday), how to grow an online fitness business using AI — 100% free, link in description
 - One-on-one online training: apply via second link in description; must respond to the auto-text or Brandon ignores you
- "Thought Repellent" product (joke/satirical product) — targeting 4th of July launch if enough super chats

Rule 1 — Track Everything That Matters

Fat loss is pure math: **3,500 calories = 1 lb of fat**

- 500 cal/day deficit × 7 days = 3,500 cal = 1 lb/week lost
- 1,000 cal/day deficit = 2 lbs/week lost
- Step 1: Track calories burned — use a wearable
- Options: Apple Watch, Oura Ring (Brandon's preference for style/versatility), Garmin, Whoop
- None are 100% accurate but give a usable range to calibrate from
- Step 2: Track calories consumed
- Old method: MyFitnessPal (Brandon used it 10+ years)
- **New method: Claude (AI) with a custom prompt**
- DM Brandon the word "tracking" on Instagram to get the prompt + instructions
- Works with ChatGPT too, but Claude uniquely connects to Apple Health data to read live calorie burn
- How it works in practice:
- Type or photograph what you ate (works better if you name the food)
- Claude estimates macros/calories and gives a **running daily total**
- Simultaneously reads Apple Health burn data and shows current surplus/deficit

- If scale unavailable (e.g., catered event), photograph the plate, state what it is, Claude estimates portion — Brandon tested this vs. weighing; found it acceptably accurate
- Can upload a screenshot of Oura Ring data to override lagging Apple Health sync
- At day's end, type "new day" to reset the running count
- Duke University study: subjects who *only* tracked calories (no diet or workout plan) lost an **average of 5 lbs in 3 months** — because awareness alone drives better decisions
- Simple targets
- Calories: $\text{body weight (lbs)} \times 10 = \text{daily calorie target}$ (e.g., 200 lb 2,000 cal)
- Protein: $\text{body weight (lbs)} \times 1 = \text{daily grams of protein}$ (e.g., 200 lb 200 g protein)
- Carbs/fats: Brandon doesn't care what you do with them; calories and protein are what matter

Workout guidance (optional but accelerating)

- 30–60 min steady-state cardio per day — low intensity, conversational pace (bike, elliptical, walking all fine)
- 3–4 full-body workouts per week; 1–2 exercises per body part; 3–4 sets each
- Diet is the primary driver: "you can't out-train a bad diet, but you can outdiet bad training"

Rule 2 — Stop Working on BS; Work on the One Thing

- Source: book *The One Thing* (author was worth hundreds of millions at time of writing)
- Core question: *"What is the one thing that, if you accomplished it, would make everything else easier or unnecessary?"*

Once identified, **work on it for 4 hours per day** — focused, distraction-free, notifications off

- Does NOT have to be 4 consecutive hours (e.g., 2 hrs morning + 2 hrs evening)
- Does NOT have to be exactly 4 hrs every single day — requires an *average* of 4 hrs/day across the week
- Make up missed days on weekends (e.g., miss Friday do 6 hrs Saturday + 6 hrs Sunday)
- Studying and reading do NOT count toward the 4 hours — you must be *doing* the thing
- Brandon's own example: after reading the book, he focused 4 hrs/day on **content creation** made his first million as an online trainer
- Common mistakes people make instead of working on the one thing:
 - Spending months picking a name or logo
 - Watching YouTube videos or reading about the topic instead of doing it

"If you do this, you will not fail" — Brandon states this as a guarantee if truly consistent

Rule 3 — Live Out of Your Calendar

- "I don't have time" is not a real constraint — it's ineffective use of time
- Tool: **Google Calendar** (only calendar Brandon recommends)
- Two types of tasks:
 - *Recurring tasks*: sleep schedule, gym, meals, work hours, family time, commute — block these first
 - *One-time tasks*: vary day to day or week to week; schedule these into remaining white space
- Step-by-step calendar build (Brandon demos live on screen)

- Block sleep (e.g., 10 PM–6 AM, daily recurring)
- Block work (e.g., 9–5, weekdays recurring)
- Block commute (Brandon says if yours is over 1 hour, you need to move)
- Block workout (1 hr max, daily)
- Block family time / date night as appropriate
- Find and block "One Thing" deep work to hit ~28 hrs/week total (avg 4 hrs/day)
- Example: 2 hrs Mon, 2 hrs Wed, 2 hrs Thurs on weekdays = 16 hrs add 6 hrs Sat + 6 hrs Sun = 28 hrs total

The hidden benefit: planning every hour automatically eliminates bad habits — there's no slot for aimless scrolling, gaming, or other time-wasters. Brandon says this is how he accidentally quit weed and alcohol 11 years ago.

- Brandon's promise: "Everyone I know who starts planning every hour of every day — in 90 days, their whole life changes. I've never seen it not happen."
- Expect to miscalibrate at first (wrong estimates on task duration); keep adjusting — you'll get better

No white space in the calendar: "White space is the devil"

Common excuses addressed

- Kids as an excuse: Brandon calls this a burden to place on children; use kids as *motivation*, not an excuse — take them to trampoline parks, water gun fights, walks; burns calories and builds relationship
- Girlfriend/wife cooking fattening food: still your responsibility what goes in your mouth

"I don't have time": solved by Rule 3 (calendar planning)

90-Day Challenge Summary

- Track calories consumed and protein daily
- Track calories burned (wearable)
- Identify your one thing and spend 4 hrs/day on it
- Plan every single hour in Google Calendar — no white space

Outcomes expected: best shape of your life, more disposable income, improved confidence, more energy, more respect from family/peers

Market Recap Segment — with "Young Candlestick" (Greg, Series 65)

- Context: Trump peace deal signed Sunday; SpaceX IPO; FOMC Fed meeting next day with new chair Worsh
- 90-day S&P forecast: "whole lot of nothing" — base case is neutral; not a big trending market up or down
- S&P was up big the prior day, pulling back slightly
- IWM (small caps): stair-stepping higher but possible rising wedge — cracks in the armor; if it loses prior all-time highs, bearish signal
- Semiconductors: had a -5% down day after a big run; likely some softness/weakness ahead

NBIS (Nebius — AI data centers): being added to NASDAQ 100 / QQQ — bullish catalyst

- Stock up 210% YTD; near all-time highs (~\$278 breakout level)
- Greg originally noted it near \$215 as a buy
- Crude oil: sold off hard on Trump peace deal; Greg's technical target is \$60/barrel as potential dip-buy
- Gas below \$3/gallon likely won't happen for a long time, possibly never, absent major shift to EVs

- Bitcoin: lower lows, dead-cat bounce, not doing much
- VIX: big spike then came back down, forming a potential bottom — could mean short-term market weakness
- FOMC tomorrow: market will spike up or down based on report and Fed chair comments; Greg says "if you don't know where it's going, just stay in cash"
- Google: Greg bought last week and added more; Google owns 7% of SpaceX; up ~20% YTD, near highs
- SpaceX (SPCX): ran from \$149 to \$225; options now available but stupidly expensive (implied vol very high)
- Greg likes **selling bullish put credit spreads at \$175 into Friday** — risk ~\$450 to make ~\$50, ~90% probability of profit
- Gamma squeeze possible if stock breaks above all-time highs
- Microsoft: out of rotation, can't catch a bid; Greg bought at \$390 and \$400, currently down
- Apple: doing well, just slightly off all-time highs
- Meta: stuck in consolidation, well below all-time highs
- Netflix: bleeding since last earnings; fair value ~\$120/share (50% upside from ~\$78); Greg would wait for it to find a base around \$85 before buying
- Caterpillar (CAT): breaking out to all-time highs — industrial pick
- **TSM (Taiwan Semiconductor)**: Greg's favorite semiconductor; building large plants; target \$1,000 in 3 years (currently ~\$425); pays a dividend; Greg sells monthly bullish put credit spreads on it
- Victory Trades community plug: Greg's daily trade alerts to your phone, live futures trading every morning; PDT rule relaxed — only need ~\$2,000 in a margin account to day trade freely
- Recent Victory Trades wins highlighted: HIMS flat-top breakout (\$200 profit, 2 months of membership paid); \$99 into \$550 (455% gain); \$837 on funded account; 123% scalp on a put for \$97 \$217

Iran deal discussion: Trump administration reportedly discussing deal giving Iran access to ~\$300 billion (vs. Obama deal at \$1.7 billion); both agree neither deal is truly "free" to Americans given war costs, higher gas prices, lost lives

Super Chat Q&A Highlights

- Disney cruise recap: Brandon and his son went solo; son said "I think today was one of the best days of my life" — Brandon emotional about it
- Book rec: *Awaken the Giant Within* by Tony Robbins — read the physical book, not the audiobook (abridged)
- Keto + caffeine + Bromelain ("Bronade") success story: listener went from 19% to near 10% body fat on 1,000 cal deficit, no hunger
- Brandon notes this beats GLP-1 drugs, which cause "Ozempic face" (muscle loss in the face from excessive appetite suppression)
- 6'6", 265 lbs with no definition except traps: answer is fat loss, not more lifting — cap at 3,000 cal/day, high protein
- 260 lbs wanting to reach 200 lbs by December (~24 weeks): feasible — needs **1,000 cal/day deficit** = 2 lbs/week = ~48 lbs; add weekly 24-hour fast to hit 60 lbs
- FX trading improvement: download historical data on your pair, practice on Ninja Trader in simulated sessions; Brandon hit his first \$50K payout after exactly 200 hours of sim practice
- PRS Silver Sky SE guitar discussion: listener/commenter (Black PhD guitar teacher with dreadlocks) influenced Brandon's buying decision; Brandon modded his with a coil-split pickup switcher (~\$100) to get humbucker tones
