Stop wasting time between gym sets

Channel: Brandon Carter · Published: Oct 17, 2026 · Watch: https://www.youtube.com/shorts/5kDgR5tl1To Source: full transcript

📋 Executive Summary

Brandon Carter outlines a simple framework to eliminate wasted time between gym sets: strict timed rest intervals and supersetting opposing muscle groups to finish effective workouts in 60–90 minutes.

📑 Contents

- 🏋️ Workout Structure Overview
- ⏱️ Timing Your Rest Between Sets
- 🔄 Supersetting Opposing Muscle Groups

🏋️ Workout Structure Overview 0:00

- Pick **1–2 exercises per body part**
  - Keeps the session focused and prevents bloat
- Do **3–4 sets of each exercise**
- Total workout time should be **60 to 90 minutes maximum**
  - Achievable only if you follow the rest and superset instructions below

⏱️ Timing Your Rest Between Sets 0:24

- Time every rest period — do not guess or drift
- Brandon uses an **Apple Watch** for hands-free timer setting
  - Immediately after the last rep, he says aloud: "Set 90-second timer" or "Set 60-second timer"
  - When the timer sounds, he goes straight into the next set — no delay
- Rest window: **60 to 90 seconds** between sets

🔄 Supersetting Opposing Muscle Groups 0:24

- Instead of resting completely between sets, immediately move to an exercise for the **opposing muscle group**
  - This keeps one muscle group recovering while the other works
- Example pairing — **chest and back**:
  - Perform a set of **bench press**

    - Go directly into **bent-over rows** (no rest in between)
    - Rest **60–90 seconds**
    - Repeat back to bench press, then rows again
- This approach **speeds things up significantly** by turning passive rest into productive work on the opposing muscle
