

Some books are a waste of time

Channel: Brandon Carter · Published: Jul 18, 2026 · Watch: <https://www.youtube.com/shorts/x-a4OpYxTiA> Source: full transcript

Executive Summary

Brandon Carter calls out *The Secret* as overhyped and traces it back to its source book, *The Science of Getting Rich*, which contains a critical principle the author omitted: do all that can be done, every single day.

-  The Secret Is Overhyped — And Why
-  The Missing Principle from the Real Source Book
-  What "Do All That Can Be Done Each Day" Actually Means
-  Why Most People Fail Their Goals

The Secret Is Overhyped — And Why 0:00

- Brandon identifies *The Secret* by Rhonda Byrne as a book that wasted his time
 - He is not dismissing the law of attraction entirely — "I'm not saying that the law of attraction is BS"
 - His issue is that the book misrepresents or incompletely portrays how it actually works
- He points to the origin story of *The Secret*
 - Legend has it Byrne was inspired by *The Science of Getting Rich* by **Wallace D. Wattles**
 - His recommendation: skip *The Secret* and read that source book instead

The Missing Principle from the Real Source Book 0:10

- Wattles repeated one specific principle **over 50 times** throughout *The Science of Getting Rich*
 - That principle: **"Do all that can be done each day"**
- This principle is what Brandon says Byrne left out of *The Secret*
 - It is presented as the critical, actionable counterpart to the law of attraction — the piece that makes it actually work

What "Do All That Can Be Done Each Day" Actually Means 0:23

- Brandon carefully unpacks each word of the phrase to show it means something more demanding than typical hustle advice
- "Do all that **can** be done" — this is about capacity, not just effort

- It is not working hard
- It is not grinding or hustling
- It is working **at full capacity** — the maximum you are capable of
- **"Each day"** — this is about consistency without exception
 - Not sometimes
 - Not most of the time
 - Not a lot of the time
 - Every day — including **weekends, birthdays, and Christmas**

"If you do all that can be done each day, there's no way you can fail. It's literally impossible."

✗ Why Most People Fail Their Goals 0:46

- Brandon argues failure is almost always explained by violating this principle
 - "Think about all the goals you failed at. Did you do all that you can do every day? No."
 - Most people worked hard *sometimes* — but that is not the same as doing all you can do *every* day
- The standard is absolute and binary: full capacity, every single day
 - Falling short of that standard — even occasionally — is what he identifies as the root cause of unmet goals
- His closing point: meet that standard consistently and failure becomes impossible by definition
