

Get Your Body and Bank Account Right This Summer EP 307

Channel: Brandon Carter · Published: Jun 17, 2026 · Watch: <https://www.youtube.com/watch?v=5EZaF9YzXIA> Source: full transcript

Executive Summary

Brandon Carter outlines three actionable rules for a 90-day summer transformation: track calories and macros with AI, work four focused hours daily on your one financial needle-mover, and live out of a Google Calendar with zero white space.

Detailed Breakdown

• Intro & framing

- Episode 307 of the Victory Talk podcast; co-hosted by Mo Novia "DJ Chita Grande" who monitors the live chat
- Core promise: "90 days from now you can be in the best shape of your life and have way more disposable income"
- Motivation hook: the Aesop fable of ants vs. grasshopper — grasshopper parties all summer, winter comes, grasshopper dies; ants survive because they prepared

Key diagnosis of why people stay fat and broke: they confuse *motion* with *progress*

- Fitness example: eating "healthy" smoothies and nuts without tracking calories still gaining fat on expensive food
- Business example: spending months choosing a name or logo instead of activities that actually generate clients or revenue

Sponsor / promotional segments

Free live training: **Sunday, June 28th** on how to grow an online fitness business using AI; link in description; 100% free

- Brandon claims: made first million as an online trainer; "tens of millions" total; taught **over 15,000 people** to grow online fitness businesses
- Notable alumni: Austin Dunham, FedEx Fearless, Corey Armstrong

- One-on-one fitness coaching: second link in description; applicants receive an automated text and must reply to be considered — no reply = ignored

Joke product "Thought Repellent" (satirical spray to "keep the holes away"); goal to launch by July 4th if enough super chats

The Three Rules — overview

- Rule 1: Track everything that matters
- Rule 2: Stop working on unimportant stuff; work only on what moves the needle

Rule 3: Live out of your calendar

Rule 1 — Track Everything That Matters (Fat Loss side)

- Core formula: fat loss is pure math
- **3,500 calories = 1 lb of fat**
- To lose 1 lb/week 500-calorie daily deficit ($500 \times 7 = 3,500$)

- To lose 2 lbs/week 1,000-calorie daily deficit
- Step 1 — Track calories burned (use a wearable)
- Recommended devices: Apple Watch (workout use), **Oura Ring** (Brandon's daily wear — blends with all attire including suits), Garmin, Whoop
- Whoop critique: looks like "spy kids" at formal events; fine if that's what you have
- Samsung Watch: jokingly says no record of anyone wearing one and maintaining a sex life — avoid
- Note: no device is 100% accurate but provides a usable range for calibration
- Step 2 — Track calories consumed
- Brandon used **MyFitnessPal for over a decade** but is now experimenting with a new AI-based approach
- **New method: Claude (AI) with a custom prompt**
- DM Brandon the word **"tracking"** on Instagram to receive the full prompt and setup instructions
- Works with ChatGPT too, but Claude has the exclusive ability to connect to Apple Health data, giving a live caloric burn reading inside the same chat
- How it works in practice:
- Type or paste what you ate (weighing food is more accurate but optional)
- Upload a photo of a food label or a plate — Claude estimates portion size and calculates macros
- Claude returns: macros per item, running daily total, and current caloric deficit or surplus
- Example from transcript: ate Denver omelette (4 oz, weighed), uploaded; Claude returned macros + running deficit of 561 calories
- At a catered barbecue where weighing was impractical: snapped photos of two plates of vegetables + a plate of steak, chicken breast, and habachi sauce Claude estimated portions and updated running total
- End-of-day check: total burn showed low (2,200 cal); uploaded Oura Ring screenshot manually Claude recalculated deficit to **940 calories**
- Key advantage over MyFitnessPal: handling sauces and cooked dishes is easier — just describe it verbally or upload a photo
- To start a new tracking day: type "new day" and Claude resets the counter

Duke University study on calorie tracking

- Researchers gave overweight participants MyFitnessPal with zero dietary or workout instructions — just told them to track
- Result: participants **lost an average of 5 lbs in 3 months** with no plan whatsoever
- Mechanism: seeing daily intake in real time causes people to naturally make better decisions
- Brandon's 27 years of training experience corroborate: every new client is shocked by how many (or how few) calories they actually eat
- Simple calorie and protein targets (Brandon's formula)
- **Calories per day** = body weight in pounds × 10
- Brandon at 200 lbs 2,000 calories/day
- **Protein per day (grams)** = body weight in pounds × 1
- Brandon at 200 lbs 200 g protein/day

- For first-year trainees: this formula simultaneously burns fat AND builds muscle ("newbie gains" — only possible naturally in the first year of serious training)
- For experienced trainees (like Brandon, ~30 years): preserves muscle during a cut
- Brandon's personal macro targets: 2,000 cal, 200+ g protein, carbs under 50 g (keto); fats flexible

Workout prescription (minimalist)

- Diet alone is sufficient for fat loss: "you can't out-train a bad diet, but you can outdiet bad training"
- Optional cardio upgrade: **30–60 minutes of steady-state cardio per day** at a conversational pace (walk, bike, elliptical — no high-intensity required)
- Resistance training: **3–4 full-body workouts per week**; pick 1–2 exercises per body part; 3–4 sets each

Rule 2 — Stop Working on Unimportant Things (Wealth side)

- Source: book **"The One Thing"** by Gary Keller (author was worth "a few hundred million" when he wrote it ~20 years ago)
- Core question from the book: *"What is the one thing that, if you accomplished it, would make everything else easier or unnecessary?"*

Prescription: **work on that one thing for 4 focused hours per day**

- Focused = no distractions, notifications off, locked in
- Studying, reading, and watching YouTube do NOT count toward the 4 hours — only actually doing the thing counts
- Does not need to be 4 consecutive hours (e.g., 2 hrs morning + 2 hrs evening works)
- Does not need to be exactly 4 hrs every single day — **average of 4 hrs/day** over the week is the target
- Missed a day? Make it up: do 6–8 hrs on weekend days
- Brandon's personal example: after reading the book, he committed to **4 hours/day of content creation** made his first million as an online trainer

Claim: "If you do this with any goal, you cannot fail. Almost nobody does it."

Rule 3 — Live Out of Your Calendar

- Premise: "I don't have time" is never true — time is just not being used effectively
- Tool: **Google Calendar** (only calendar Brandon recommends)
- Two types of tasks:
 - *Recurring tasks*: sleep, wake time, gym, meals, work, family time, commute — block these permanently
 - *One-time tasks*: specific actions that vary day to day or week to week — schedule these individually
- Step-by-step live demo (building a sample calendar)
- Block **sleep**: e.g., 10 PM–6 AM, set to repeat daily (consistent sleep/wake = healthy circadian rhythm)
- Block **work**: 9 AM–5 PM, repeat weekdays
- Block **commute**: 1 hour each way (if commute is over 1 hour, Brandon says move closer to work)
- Block **workout**: 1 hour per day, repeat daily
- Find space for **"the one thing"** (deep work blocks) — color-code these differently for visual priority
- Example schedule: 2-hr deep work blocks on Monday, Wednesday, plus 6-hr blocks Saturday and Sunday = average of ~4 hrs/day across the week

- Block **date night / family time**: e.g., Tuesday and Friday evenings
- Rule: **no white space** — "white space is the devil"; every unscheduled hour gets something assigned
- Unexpected benefit of living by the calendar
- Bad habits (gaming, smoking, scrolling) disappear automatically because they never get scheduled
- Brandon's own example: quit weed and alcohol **~11 years ago** without trying — they just weren't in the calendar so they didn't happen
- Caveat on execution: at first you'll misjudge how long tasks take — stick with it and you'll improve at estimation

Kids / girlfriend as excuses — Brandon's rebuttal

- Kids are motivation, not an excuse; blaming them for your failure is an unfair burden to place on them
- Disney cruise with his son: swimming with dolphins, water gun fights, pool time burned tons of calories while bonding
- Trampoline parks, walks, active play with kids = legitimate cardio; use Apple Watch / Oura Ring to track it
- Girlfriend cooking indulgent food: still your responsibility — "just because it's there don't mean you got to eat it"

90-Day Challenge Summary (Brandon's explicit action steps)

- Track calories consumed daily (Claude AI prompt method or MyFitnessPal)
- Track calories burned daily (wearable device)
- Hit your calorie target (body weight lbs × 10) and protein target (body weight lbs × 1 gram)
- Work 4 hours/day on your single most important financial task
- Plan every hour of every day in Google Calendar; no white space
- Expected results in 90 days: best shape of life, more disposable income, higher confidence, more energy, more respect from family and peers

"If you plan every hour of every day in your calendar, I promise you, you will have more time. In 90 days, your whole life changes. I've never seen it not happen."

• Market Recap segment with "Young Candlestick" (Greg, Series 65 licensed)

- Context: S&P 500 up the prior day, pulling back slightly; Greg's base case is "a whole lot of nothing" for summer — not a big upside run, not a big sell-off; market moved from oversold to slightly overbought
- Small caps (IWM): stair-stepping higher but forming a possible rising wedge — "cracks in the armor"; key level is prior all-time highs; losing that level would be bearish
- Semiconductors: had a large down day (−5%) after a strong run; may see more softness in coming weeks
- **NBIS (Nebius — AI data centers)**: Greg's prior pick on Victory Talk near \$215; stock is up **210% year-to-date**; being added to NASDAQ 100 / QQQ (bullish catalyst); next setup is a breakout above all-time high of **\$278** (expensive but still likes it longer term)
- **Crude oil**: sold off hard after Trump signed a peace deal; Greg sees technical "rounding top" on oil; potential downside to **\$60/barrel** but thinks that would be a buying opportunity; does not expect gas prices to sustainably go below **\$3/gallon** without a major shift to EVs
- Iran peace deal discussion: Trump administration reportedly discussing deal giving Iran access to **\$300 billion** vs. Obama's prior **\$1.7 billion** deal (~200× more); both hosts skeptical of the optics but Greg notes war costs taxpayers money directly and indirectly regardless of how the deal is funded
- **Bitcoin**: lower lows, dead-cat bounce — "really just nothing"

- **VIX**: big spike then came back down; forming a small bottom — could signal short-term market sell-off; FOMC meeting the next day acts like an earnings report (big binary move likely)

Stock picks and commentary

- Google (GOOGL): Greg bought last week and added more; up **~20% YTD**; owns **7% of SpaceX** — proxy play on SpaceX IPO without paying SpaceX's inflated option premiums
- SpaceX (SPCX): IPO'd; stock moved from **\$149 to \$225**; options just opened but are "stupidly expensive" — pricing in too much volatility; Greg likes selling **bullish put credit spreads at \$175 into Friday** (risk \$450 to make \$50; ~90% probability of profit); if it breaks all-time highs, watch for a gamma squeeze
- Apple: slightly off all-time highs; holding well
- Meta: still well below all-time highs; stuck in consolidation
- Netflix: bleeding since last earnings; fair value **~\$120/share** (implies **50% upside** from ~\$78); but trend is bearish — Greg would wait for price to drop further, bounce to ~\$85, form a new chart pattern, then buy
- Microsoft: "out of rotation, out of favor"; Greg bought at \$390 and averaged up at \$400; watching to see if this is short-term weakness
- **Caterpillar (CAT)**: breaking out to all-time highs; likes it as an industrial play
- **TSM (Taiwan Semiconductor)**: Greg's favorite semiconductor; building large plants; at **\$425**; Greg's target: **\$1,000 in 3 years** (reliable double); pays dividend while you wait; sells monthly bullish put credit spreads for income
- HIMS: textbook flat-top breakout above \$30; one trade alert member made **\$200 in one day** (two months of Victory Trades subscription paid for in one trade); another member turned **\$99 into \$550 (455% gain)**
- Pattern day trader rule update: as of now most brokers require only **~\$2,000** in a margin account (not the old \$25,000 PDT threshold) to day trade freely in and out

Victory Trades plug: Greg's daily trade alerts to your phone; live futures trading every morning; Brandon away on Disney cruise for a week but back now

Super Chat Q&A highlights

- **Book recommendation**: After "Rich Dad Poor Dad" and "Atomic Habits," Brandon recommends **"Awaken the Giant Within" by Tony Robbins** — "one of the best books I ever read, top five for sure"; warning: do NOT get the audiobook, it's abridged and "a sham" — read the physical book
- **Jesse's result**: went keto + caffeine + Bromate 1,000-calorie daily deficit with no hunger dropped from **19% to nearly 10% body fat**; Brandon compares this to Ozempic but says caffeine + Bromate is cheaper and less extreme ("Ozempic face" = muscle loss including facial muscles from excessive appetite suppression)
- **Martin**: lost **30 lbs** using MyFitnessPal + Deep Work methodology; now writing his first book
- **Stephen**: asks how Brandon would structure a day if trading were his one thing Brandon practiced simulated trading on **Ninja Trader using historical data, 2 hrs/day** logged exactly **200 hours** received first **\$50,000 payout from Apex Funding**; key lesson: traders rarely actually practice; treat it like any skill that requires deliberate repetition
- **Martin (66", 265 lbs, down from 298)**: has no definition except traps diagnosis: still carrying too much fat; definition comes from low body fat, not lifting alone; prescribed no more than **3,000 calories/day**, ~300 g protein; reduce overall intake
- **Mike (260 lbs, wants to reach 200 lbs by December)**: ~24 weeks away; needs **1,000-calorie daily deficit** to lose 2 lbs/week 24 weeks × 2 lbs = ~48–50 lbs; to hit 60 lbs, add **one 24-hour fast per week** on top of the deficit; keto helps naturally suppress appetite but doesn't replace the caloric math
- **FX trading improvement**: same advice as general skill-building — download historical data for your currency pair and session, simulate trades repeatedly; Brandon got his first Apex payout after exactly 200 hours of simulated practice

Andre (guitar teacher): down from 195 to 181 lbs heading to 170, building a guitar lesson business; Brandon credits him with influencing the purchase of a **PRS Silver Sky SE** guitar (recommended SE over the standard model at ~1/4 of the price with nearly identical quality, saving Brandon ~\$2,000); Brandon also modded the guitar with a pickup switch mod (~\$100) to simulate humbucker tone

Recurring logistics

- Victory Talk podcast streams live **every Tuesday and Thursday at 5:00 PM Eastern**
- Free live training: **June 28th** — how to grow an online fitness business with AI; link in description
- One-on-one online training applications: second link in description; must respond to automated text to be considered
