

EXTREME 90-Day Plan to Get Ripped and Rich (No BS)

Channel: Brandon Carter · Published: Jun 22, 2026 · Watch: <https://www.youtube.com/watch?v=ZnTws58zp4o> Source: full transcript

Executive Summary

Brandon Carter's three-rule summer blueprint: track all calories with AI tools, spend four focused hours daily on your single highest-leverage financial goal, and live by your Google Calendar to eliminate wasted time and bad habits.

The Ant and the Grasshopper: The Summer Mindset 0:00

- Brandon opens with his version of Aesop's fable to frame the entire video
 - The grasshopper wasted summer partying; the ants worked diligently all summer preparing for winter
 - Winter came — the grasshopper died; the ants thrived
- The application: summer is the window to build the life you want
 - Partying, scrolling Instagram, and chasing uninterested women = grasshopper behavior
 - Working on fitness and income now = ant behavior
- The promise: do the three things in this video over 90 days and you will get in the best shape of your life AND have significantly more disposable income
- The three rules previewed:
 - Rule 1 — Track everything that matters
 - Rule 2 — Stop working on nonsense; work on what matters
 - Rule 3 — Live out of your calendar

Rule 1: Track Everything That Matters (Getting Ripped) 1:56

- Core principle: **fat loss is pure math**
 - Every pound of fat = 3,500 calories
 - To lose 1 lb/week → maintain a 500-calorie daily deficit ($500 \times 7 = 3,500$)
 - To lose 2 lbs/week → maintain a 1,000-calorie daily deficit
- You must track BOTH sides of the equation: calories burned AND calories consumed
- Step 1 — Track calories burned with a wearable device
 - Options mentioned: Apple Watch, Garmin, Whoop, Oura Ring, Samsung Watch
 - Brandon's current choice: **Oura Ring** — blends seamlessly with all attire (suits, casual, workouts, weddings)
 - Previously wore Whoop but found it looked out of place with formal wear
 - Apple Watch used during workouts but feels like "a big ass medical device" to him
 - Key caveat: none of these devices are 100% accurate, but they provide a usable range you can calibrate around
- Step 2 — Track calories consumed
 - Brandon used **MyFitnessPal** for over a decade
 - Currently testing **Claude AI** as a potentially superior replacement
 - Also works with ChatGPT, though Claude has a unique added feature
- Duke University study on the power of tracking alone:
 - Recruited overweight participants; gave them MyFitnessPal
 - No diet plan given, no workout plan given — just told to track what they already eat
 - Result: participants **lost an average of 5 pounds in 3 months** with zero other changes
 - Why it works: seeing real numbers forces better unconscious decisions
 - Brandon's 27 years as a personal trainer confirm this — clients are always shocked by how many (or how few) calories they actually eat
 - Skinny guys who "can't gain muscle" are often eating only 1,500 calories/day
 - Overweight people who "tried everything" have never tracked

Using Claude AI as a Calorie-Tracking System 4:19

- Brandon has built a custom prompt that turns Claude into a personalized macro and calorie tracker
 - To get the prompt: DM Brandon on Instagram the word **"tracking"** and he sends it directly
- How the system works step by step:
 - Load the custom prompt into Claude at the start of a session
 - Log food by typing what you ate (weighing food for precision is optional but recommended for accuracy)
 - Claude returns macros and calories for that item plus a **running daily total**
 - Start a new day by typing "new day" — Claude resets and begins fresh tracking

- Claude's unique capability vs. MyFitnessPal:
 - Claude can be connected to **Apple Health data** directly on your phone
 - It reads your real-time calorie burn from Apple Health and calculates your actual surplus or deficit automatically
 - Example from the video: Brandon was at 561-calorie deficit mid-day after logging meals and syncing burn data
- Photo-based logging (the biggest advantage over MyFitnessPal):
 - At a catered barbecue where weighing food was impractical, Brandon photographed his plates and uploaded images directly to Claude
 - Claude estimated portion sizes, calculated macros and calories, and added to the running total
 - Brandon tested photo estimates against actual weighed food — results were within an acceptable margin
 - Pro tip: tell Claude what you're eating rather than making it guess from the photo alone — accuracy improves significantly
 - Also works with food label photos: snap and upload, no manual entry needed
- When Oura Ring and Claude data conflicted (Apple Health lagging), Brandon uploaded a **screenshot of his Oura Ring** app directly into Claude to get a corrected deficit — Claude adjusted and gave a revised figure (900-calorie deficit in that example)
- Sauce and mixed-dish problem solved:
 - A longstanding limitation of MyFitnessPal was estimating sauces or foods cooked in sauces
 - With Claude, you simply describe it: "this had hibachi sauce on it" — Claude accounts for it
- Brandon's current daily targets for context:
 - Calories: **2,000/day** (cutting phase)
 - Protein: **200–240 grams/day**
 - Carbs: tries to stay under 50g (keto-leaning), though he admits it doesn't always happen

The Simple Nutrition Formula 13:51

- Two formulas, dead simple:

Goal	Formula
Daily calories	Bodyweight (lbs) × 10
Daily protein (grams)	Bodyweight (lbs) × 1

- Example: Brandon is 200 lbs → 2,000 calories/day, 200g protein/day
- Why high protein matters:
 - For beginners (first year of serious training): this combination allows simultaneous fat loss AND muscle gain — a rare window only available early in training
 - For experienced trainees like Brandon (~30 years training): high protein preserves hard-earned muscle during a cut, preventing muscle loss

- Brandon's stance on macros beyond protein and calories:
 - "I don't give a f*** what you do with the carbs and fats — do whatever you want"
 - Calories and protein are the only two numbers that meaningfully drive results

The Workout Add-On 15:50

- Diet alone is sufficient for fat loss — you cannot out-train a bad diet, but you CAN out-diet bad training
- Optional but recommended cardio:
 - 30–60 minutes of **steady-state cardio per day**
 - Low intensity — conversational pace (you should be able to hold a conversation)
 - Options: walking, exercise bike, elliptical
 - Does NOT need to be high-intensity; Brandon demos this by going live on Instagram while doing it
- Optional but recommended resistance training:
 - **3–4 full-body workouts per week**
 - Pick 1–2 exercises per body part
 - 3–4 sets per exercise
 - No more than an hour per session needed

Rule 2: Stop Working on Nonsense — Find Your One Thing 17:01

- Source: book "**The One Thing**" — author was worth hundreds of millions when he wrote it (~20 years ago)
- Core framework question from the book:

"What's the one thing that, if you accomplished it, would make everything else easier or unnecessary?"

- Apply this question to your single most important financial goal (promotion, new business, growing existing business)
- Once identified: **work on that one thing for 4 hours per day** — focused, distraction-free
 - Turn off all notifications
 - Eliminate distractions completely
 - This is execution time, not learning time
- Critical distinction — what does NOT count toward the 4 hours:
 - Watching YouTube videos about your goal
 - Reading books about your goal
 - Studying — unless being the world's best student IS your goal
 - Only actually doing the thing counts
- The 4 hours do not need to be consecutive:
 - Could be 2 hours in the morning + 2 hours at night
 - Does not need to be exactly 4 hours every single day — it needs to **average** 4 hours/day

- If you miss a day, make it up: work 8 hours another day, or 6 hours on each weekend day
- Brandon's personal example:
 - After reading the book, he identified **content creation** as his one thing for growing his online fitness business
 - Focused 4 hours/day on content → made his **first million dollars** as an online trainer
 - Has since taught **over 15,000 people** to grow successful online fitness businesses
 - Still does 4 hours of content daily
- The guarantee: "If you do this with any goal, you cannot fail. I promise you will succeed."

Rule 3: Live Out of Your Calendar 21:16

- The reframe: "I don't have time" is not a time problem, it's a planning problem
- Tool: **Google Calendar** — the only calendar Brandon recommends
- Two types of tasks to schedule:
 - **Recurring tasks** — things that happen every day or week on a fixed schedule
 - Examples: sleep, wake-up, gym, meals, work blocks, family time, commute
 - **One-time tasks** — variable items that change week to week or day to day
- How to build the calendar (Brandon walks through it live):
 - Step 1 — Lock in **sleep** as a recurring daily block (example: 10pm–6am every day)
 - Fixed bedtime and wake time sets circadian rhythms
 - Step 2 — Lock in **work/job** as a recurring weekday block (example: 9am–5pm, Mon–Fri)
 - Step 3 — Add **commute** blocks (example: 1 hour each way; Brandon notes commutes over 1 hour are excessive and you should consider moving)
 - Step 4 — Add **workout** as a recurring daily block (example: 1 hour, first thing in morning)
 - Step 5 — Find and schedule **4 hours for your One Thing** across the week
 - In the example: 2-hour blocks on Monday/Wednesday mornings + 6-hour blocks on Saturday and Sunday
 - Weekends are key — no commute frees significant time
 - Weekly total in the example: 16 hours on weekdays + 12 hours on weekends = 28 hours ÷ 7 days = 4 hours/day average
 - Step 6 — Add **date night / relationship time** (example: Tuesday and Friday evenings)
 - Step 7 — Fill remaining white space intentionally
 - "White space is the devil" — every unscheduled hour is an opportunity for bad habits
- The unexpected benefit of living by the calendar:
 - Bad habits disappear **automatically** — you never schedule "scroll Instagram" or "smoke weed" or "play Call of Duty," so they don't happen

- Brandon quit smoking weed and drinking alcohol **11 years ago** not by trying to quit, but because those activities never made it onto his calendar
- Expectations when starting:
 - You will misjudge how long things take at first — that's normal
 - Keep adjusting; you get better at estimates over time
 - Brandon's real calendar is far more complex (meetings, etc.) — the video shows a simplified version
- Quote from experience: "Everybody I know who lives out of their calendar — in 90 days, their whole life changes. I've never seen it not happen."

Excuses Addressed: Kids, Girlfriends, and Busy Schedules 32:00

- On kids as an excuse:
 - "Your kids should be your motivation, not your excuse"
 - Brandon went on a Disney cruise solo with his son and burned "crazy calories" — swimming with dolphins, running around the boat, going to the pool
 - At a barbeque, ran around in a water gun fight with kids → burned significant calories
 - Practical tips: take kids to trampoline parks and participate; go on walks; use Apple Watch on "outdoor play" mode to track burn
 - "Don't be the fat dad sitting down" while kids run around
- On girlfriends as an excuse:
 - A friend ("Jay") lost weight, then regained it after getting a girlfriend because she cooked rich food and he lost motivation
 - Brandon's girlfriend cooks to support his goals and even weighs his food for him
 - Even if your partner doesn't do that: you are still responsible for what goes in your mouth — presence of food doesn't obligate you to eat it
- On not having enough time:
 - Already addressed structurally in Rule 3 — the calendar exercise proves the time exists
 - "It's not that you don't have enough time, it's that you're not using it effectively"

90-Day Challenge Summary & Closing Offers 34:43

- The three-part 90-day challenge in plain terms:
 - **Track calories and protein** — use Claude AI with the custom prompt (DM "tracking" on Instagram to get it); track calories burned via wearable
 - **Four hours daily on your One Thing** — the single highest-leverage action toward your financial goal; no distractions; execution only (not studying)
 - **Live out of Google Calendar** — plan every hour of every day; no white space; recurring + one-time tasks scheduled in advance
- Promised outcomes after 90 days if you follow the plan:

- More disposable income
- Significant career/money progress
- Higher mental drive and confidence
- More self-respect and respect from those around you
- Better appearance, more energy, better health, longer life
- Bad habits eliminated passively through calendar discipline
- Additional offers mentioned:
 - **Live training on June 28th** — how to grow an online fitness business using AI; link in description
 - **1-on-1 online training with Brandon** — accountability for hitting daily calories, macros, and workouts; apply via link in description; must respond to the automatic text message or Brandon will not follow up
 - To get the Claude tracking prompt: DM **"tracking"** to Brandon on Instagram
