

How to Completely Change Your Life in 90 Days

Channel: Brandon Carter · Published: Aug 31, 2026 · Watch: https://www.youtube.com/watch?v=ObX_nEcCOGc Source: full transcript

Executive Summary

Brandon Carter lays out a nine-part framework — three steps each for setting, planning, and executing goals — designed to completely redirect your life trajectory in 90 days before the new year, while everyone else waits until January 1st.

Contents

-  Why Start Now (Not January 1st)
-  Phase 1 — Setting Goals: Prioritize
-  Why Money Should Be Your #1 Priority
-  Phase 1 — Setting Goals: Harmonize
-  Phase 1 — Setting Goals: Sacrifice
-  Phase 2 — Planning Goals: Plan Every Step
-  Phase 2 — Planning Goals: Set Due Dates & Recurring Tasks
-  Phase 3 — Execution: Plan Every Hour in Your Calendar
-  Free Resources & Next Steps

Why Start Now (Not January 1st) 0:00

- The core argument: starting a 90-day transformation NOW means you enter 2027 with momentum already built
 - Everyone else starts their goals on January 1st — you'll be ahead, picking up speed while they're just beginning
- The 90-day window is framed as enough time to change your shape, income, living situation, and overall trajectory

Phase 1 — Setting Goals: Prioritize 1:59

- Life can be broken into **four quadrants**:
 - Health & Fitness
 - Money / Wealth
 - Family & Friends (relationships, non-romantic)
 - Romantic Relationships (kept separate because intimacy changes the dynamic fundamentally)

- The framework calls for picking ONE quadrant as the main priority — not ignoring the others, but having a clear #1
- Carter's strong recommendation: make **money/wealth** the top priority

Why Money Should Be Your #1 Priority 2:50

- Money is the only quadrant that actively improves ALL other quadrants simultaneously
- Arguments made for each competing priority:
 - **"Family is most important"** → Studies show children from wealthy families have better outcomes in all areas of life; parents' income is cited as the #1 predictor of children's success; "you don't do the best for your kids — you do the best you can afford"
 - **"Health is most important"** → Wealthy people live longer, healthier lives (studies cited); access to better facilities, private doctors, best medicine; Carter's personal claim: hasn't had a cold in 11 years; Magic Johnson example — survived HIV in the 80s/90s because he could afford the best doctors and medicine, otherwise he "would be dead like everyone else who got HIV"
 - **"Romantic relationships are most important"** → Studies show wealthier people get divorced less; the #1 reason for divorce is financial problems; "if you have enough money, you stay married longer"
- Core logic: health can't pay tuition; a great family relationship doesn't prevent disease; only money improves every other quadrant
- Attractiveness bonus: studies show more attractive/fit people get promoted more, receive raises more often, and are treated differently — so fitness goals support income goals too

Phase 1 — Setting Goals: Harmonize 5:48

- After setting one main income goal, break remaining goals into categories so nothing is ignored but everything supports the main goal
- Two types of **support goals**:
 - **Offensive support goals** — things that directly help you accomplish the main goal
 - Example: 10K followers (helps hit \$10K/month as an online trainer)
 - Example: 10% body fat (builds credibility as a fitness professional)
 - **Defensive support goals** — things you must handle to prevent them from derailing the main goal
 - Example: "improve relationship" — relationship drama is cited as one of the most common reasons people fall off their goals
 - If fitness isn't your main goal, put it here as a defensive goal because being in better shape affects how people treat you professionally
- Two types of **result goals**:
 - **Altruistic result goals** — things you want that help others (e.g., "move mom out the hood")
 - **Selfish result goals** — things you purely want for yourself (e.g., buy a new car)
- Example of a fully harmonized goal map:

Quadrant	Goal Type	Example Goal
Money (Main)	Main Goal	\$10,000/month as online trainer
Health	Offensive Support	10% body fat
Romantic	Defensive Support	Improve relationship
Family/Friends	Altruistic Result	Move mom out the hood
Personal	Selfish Result	Get a new car

- Result: every goal is congruent — the main goal helps the support goals and the support goals help the main goal

Phase 1 — Setting Goals: Sacrifice 10:49

- Anything that does NOT appear on your harmonized goal map must be sacrificed — at least for 90 days
 - Typical sacrifices: video games, partying, aimlessly chasing romantic interests, recreational substances
- Key reframe: "If you're not willing to sacrifice for your goals, your goals become the sacrifice"
 - You will sacrifice either way — the choice is momentary pleasure vs. long-term goals
- The sacrifice is temporary and leads to a better version of the same pleasures later:
 - Carter's story: during his grind to his first million, he stopped watching all basketball and football games and attending parties entirely
 - Now he sits **courtside** at Heat games — CP3 once landed in his lap after a blocked layup by Bam Adebayo
 - Give up chasing lower-quality partners for 90 days → come up and attract higher-quality partners
 - Give up weed for 90 days → come up and fly to Amsterdam for the best weed
- "Just do it for a season, man. Just 90 days."
- After 90 days, the hope is that habits have changed enough that you don't need to return to the old behaviors

Phase 2 — Planning Goals: Plan Every Step 13:50

- A goal without a plan is just an idea that will never happen
- **Victory Vision Planner** — a free Notion database available in the video description
 - Each goal = one row
 - Every step required to accomplish that goal is listed under that row
 - Tracks what you need to do this week, this month
 - Includes both a one-time task tracker (Ambition Planner) and a habit tracker (Success Tracker)
 - Pre-loaded with some dummy data — delete it and replace with your own goals
 - Built-in graphs tied to income and weight tracking — do not delete those columns

- Tracks: hours worked on main goal per week, daily income, macros, calories consumed vs. burned, caloric deficit/surplus
- Can connect to Claude, ChatGPT, or Gemini via Notion integration for AI-assisted planning
- The planning question to ask yourself: **"What kind of effort would I have to put in that would make failure impossible?"**
 - Not just "what do I have to do" — push further to the level where failure becomes inconceivable

Phase 2 — Planning Goals: Set Due Dates & Recurring Tasks 15:38

- After mapping every step, assign a **due date to each individual step** — not just the overall goal
 - Almost no one does this; doing it puts you ahead of nearly everyone
 - The Victory Vision Planner has a due date field and a notes field for each step
- Two types of tasks:
 - **One-time tasks** — things done once (e.g., buy a scale, get a meal plan, download MyFitnessPal, sign up for a gym)
 - **Recurring tasks** — things done every day or regularly; these make the biggest long-term difference
 - Analogy: getting a gym membership is a one-time task; actually showing up is recurring — 80% of January gym sign-ups never return
- The Success Tracker (habit tracker tab in the Victory Vision Planner) handles recurring task tracking
- All 90-day goals should be set within this planner with clear steps, due dates, and habit tracking

Phase 3 — Execution: Plan Every Hour in Your Calendar 18:46

- Described as "a cheat code to life" — the single most powerful execution tactic
- Tool recommended: **Google Calendar**
- Step-by-step process for building your calendar:
 - Step 1 — Block your work hours (e.g., 9–5, recurring Monday–Friday)
 - Step 2 — Block your sleep (e.g., 10 PM–6 AM, recurring daily) — going to sleep and waking at the same time every day is itself a cheat code
 - Step 3 — Block commute time (recurring Monday–Friday); if commute exceeds 1–2 hours, Carter's advice is to move closer to work
 - Step 4 — Block daily workout time (recurring daily, color-coded)
 - Step 5 — For each one-time task in the Ambition Planner, estimate how long it will take, then find that block in the calendar and schedule exactly when you will do it
 - Example: "Identify target market" estimated at 2 hours → find a 2-hour open block and drag it into the calendar for a specific day
 - Step 6 — Block time for relationships (girlfriend/wife/kids) — everything important goes in the calendar
- Carter's personal AI-assisted method:

- Google Calendar + Notion connected to Claude
- Tells Claude: "Go through every task, ask me one at a time how long it will take, then find that block of time in my calendar and schedule it automatically"
- All recurring obligations (sleep, workouts, family time) are already set, so Claude just fills in the gaps
- The key insight:

"Most of y'all have enough time. You just waste so much of it because you're not planning every hour of every day in your calendar. You're just freestyling. And that don't work."

- Analogy: even Eminem freestyling will produce a better verse if given an hour to write it properly — stop freestyling your days
- Once recurring AND one-time tasks are both in the calendar, everything from the Victory Vision Planner is accounted for and execution becomes mechanical
- Carter states he has done this for over a decade — "every hour of every day is accounted for. I don't leave white space in my calendar."

Free Resources & Next Steps [23:23](#)

- **Victory Vision Planner** — free Notion database in the video description; includes Ambition Planner (one-time tasks) and Success Tracker (habit tracker); can be connected to Claude, ChatGPT, or Gemini
- **Free live training** (online fitness business focus):
 - Topic: growing an online fitness business using AI
 - Covers: using AI to grow your following, make sales, and train clients remotely
 - Bonus: free AI tools for content ideation, scripting, and editing given away live to attendees
 - Audience: works whether you're an established trainer or have never trained anyone; no certification required
 - Carter's track record cited: helped over 15,000 people build successful online fitness businesses; made his first million as an online trainer
 - Target outcome: a game plan to make an extra \$300–\$500/day as an online trainer using AI
 - Format: 100% free, Q&A live before, during, and after
- Call to action: return to this video in 90 days and leave a comment reporting results
