

You Have 100 days left.

Channel: Brandon Carter · Published: Sep 23, 2026 · Watch: <https://www.youtube.com/watch?v=vPju4Y2ppbE> Source: full transcript

Executive Summary

With 100 days left in the year, Brandon Carter presents a complete comeback framework: set congruent goals across 4 life areas, identify the one master goal (money), plan every calendar hour, track leading indicators daily, and use a free planning tool to make failure mathematically impossible.

The Comeback Framing & Brandon's Credibility 0:00

- The core analogy: **Tom Brady down ~30 points to the Atlanta Falcons**, began his comeback at the end of the third quarter, won the Super Bowl
 - The year's third quarter just ended; the fourth quarter (the final 100 days) is starting now
 - Even if you've been losing and failing all year, an epic comeback is still possible
- Brandon's background establishes why he's credible:
 - Made **over \$20 million online**
 - Built a social media empire with millions of followers
 - Has been "winning for almost two decades straight"
 - Started from the south side of Chicago; father left when he was in his early 20s; lived through the 2008 recession/global economic collapse
 - Learned everything "the hard way — lots of trial and error, lots of studying"

- Promise to the viewer: follow these instructions → shortcut decades of learning → apply it in the next 100 days

🎯 The Four Quadrants of Life & Picking One Goal Each 1:31

- The **four areas of life** that need goals:
 - **Health**
 - **Wealth**
 - **Family & Friends** (combined because some people's friends are closer than family; you'll likely keep the same family your whole life)
 - **Romantic Relationships** (kept separate because marriage/divorce dynamics differ fundamentally from family bonds)
- Task: pick **one goal per category** — what single accomplishment in each area would make 2026 a success and give momentum into 2027
- Example goals Brandon gives:
 - Health: lose 20 lbs (to avoid diabetes, have energy to play with kids, etc.)
 - Wealth: reach \$100K / get into the six-figure club
 - Family: go on a trip together to strengthen the bond
 - Romantic: do something meaningful for your partner, plan a trip, or — if single — stop "gooning" and pursue an actual relationship
- Most people set goals on January 1st and quit by Martin Luther King's birthday or Valentine's Day — the point is you still have time

💰 Why Money Is the Master Goal 3:54

- After picking one goal per quadrant, ask: **"Which single goal, if accomplished, would make all the others easier or unnecessary?"**
 - The answer is almost always money
- The oxygen analogy:
 - Oxygen is technically the most important thing in the world (you die in minutes without it), but it's so abundant you never think about it
 - **"You want to have so much money that you don't have to think about it"** — just like oxygen
 - The moment either runs out, it's all you can think about (suffocation = being broke)
- Money improves health:
 - Magic Johnson would have died from HIV in the 1980s/90s without his multi-million-dollar wealth — money bought the best healthcare, doctors, and medicine
 - Brandon hasn't been sick in **over 11 years**; when his girlfriend was sick, a doctor came directly to them instead of going to an urgent care

- Exclusive medical center on South Beach accessible only to wealthy members (described as "a Four Seasons hotel")
- Brandon had access to testosterone replacement therapy and peptides before they were widely known, before age 40
- Money improves family:
 - "You don't do the best for your kids — you do the best you can afford"
 - Studies show children from wealthy families have **better outcomes across all areas of life** on average
 - Sending kids to better schools and better situations requires money
- Money improves romantic relationships:
 - Studies show **higher income correlates with lower divorce rates**
 - Rich divorces are news precisely because they're rare; bus driver divorces happen constantly and nobody reports them
 - With money: better trips, better experiences, option for partner not to work unless she wants to

Making All Goals Congruent: Offensive, Defensive & Result Goals 9:59

- The principle: all goals must be **congruent** — no conflicting pulls in different directions
 - Spreading yourself thin across unrelated goals = "going nowhere fast"
- **Offensive support goals** — things you do that actively HELP accomplish the main (money) goal
 - Example: get in better shape → more energy, get sick less, look better (especially relevant for online trainers or social media)
- **Defensive support goals** — things you do to PREVENT something from derailing the main goal
 - Example: spend more time with your girlfriend/wife so she doesn't create relationship stress that slows you down
 - Example: spend enough time with kids so you don't get sad and lose focus
- **Result goals** — goals that are accomplished AS A RESULT of hitting the money goal; two subtypes:
 - **Altruistic result goals**: things you do for others (e.g., buy your mom a house, move her out of a bad neighborhood)
 - **Selfish result goals**: things you want for yourself (e.g., nicer meals, travel, moving to a city with more dating options)
- The test for congruency: every support/result goal should fit into one of the four quadrants AND support (not contradict) the main goal
- Result: "an aligned system" where everything moves in one direction

Planning for Failure-Proof Effort (Within Healthy Constraints) 13:21

- Most people plan goals by asking "What do I need to do to accomplish this?" — Brandon calls this "losership"

- The right question: **"What amount of effort would I have to put in to make failure impossible?"**
 - This reframes the entire approach from minimum viable effort to overkill
 - Analogy: seeing a bug and chasing it with a fly swatter vs. calling an exterminator and fumigating the whole house
- Extreme results require extreme actions — "Nobody strolls to their goal. Batman was not balanced on the way to killing Joker."
- **Non-negotiables that must stay in place** (constraints within which you plan):
 - Sleep: **7–8 hours per night**
 - Train regularly
 - Eat correctly / hit macros
 - Spend time with family
 - Do NOT sacrifice these — "We want you to come out better at the end of this"
- The refined question becomes: *"How much effort would I have to put in to make failure impossible while still getting 7–8 hours of sleep, hitting my macros every day, and spending enough time with family?"*
- After laying out what that schedule truly looks like, ask yourself honestly: **"Do I actually want this that badly?"**
 - Brandon's example: he once thought he wanted to be a doctor, researched the schooling + residency + pay, and decided he didn't want it that badly — so he didn't pursue it AND didn't complain about doctors
 - It's better to change your goal than to become a hater or a victim

One-Time Tasks vs. Recurring Tasks & Living by the Calendar 17:33

- Two types of tasks for every goal:
 - **One-time tasks**: done once (e.g., get gym membership, start LLC, open business bank account)
 - **Recurring tasks**: done repeatedly on a consistent basis (e.g., daily posting, daily workouts, weekly client outreach)
- For **one-time tasks**:
 - Assign a deadline
 - Estimate how long it will take
 - **Time-block it into your calendar** (example: gym membership = ~3 hours total for getting ready, traveling, signing up, returning home → block 3 hours)
 - Not just WHEN it gets done, but WHEN you will DO it
- **Live out of your calendar for the next 100 days**
 - Plan every hour of every day
 - Every hour should be devoted to a goal in one of the four quadrants
 - Include: work time, sleep/wake time, workouts, meals, family time, recreational time (it's fine — just plan it intentionally)
 - Brandon has done this for ~20 years since Google Calendar launched on smartphones

- Side effect of full calendar planning: **vices and bad habits disappear accidentally**
 - Brandon quit weed and drinking without ceremony — simply didn't put them in the calendar
 - Porn, gaming, and other time-wasters fade because there's no scheduled slot for them
 - "Instead of making a big declaration about it, just plan other stuff"
- Week 1–2 will be imperfect: you'll over/underestimate task durations — that's fine, make adjustments
 - Treat it like a football coach adjusting at halftime
 - Adjust during the day if needed; the calendar is a game plan, not a prison

"Every hour should be like a goddamn bullet you're shooting at your goals."

Leading Indicators vs. Lagging Indicators 24:40

- **Lagging indicator**: the result you eventually get (weight lost, revenue earned, relationship quality)
- **Leading indicator**: the daily input that CAUSES the result — this is what you focus on and control
- Fitness example:
 - **1 lb of fat = 3,500 calories**
 - If you burn **1,000 calories more than you consume every day**, you will lose **10 lbs of fat in 5 weeks** — mathematically certain
 - Tools: MyFitnessPal for calorie intake; Apple Watch or Oura Ring for calories burned
 - You don't even need to look at the scale — just verify the daily deficit
- Business example:
 - Revenue is a lagging indicator
 - Leading indicator: how many leads did you contact today? → reverse-engineer the number needed to hit your revenue goal
- Relationship example:
 - Leading indicator: how much time did you spend with them? Did you do something nice?
- The psychological benefit: focusing on today's leading indicators lets you feel successful TODAY instead of deferring happiness until the goal is reached
- Stack one successful day after another → failure becomes nearly impossible over 100 days
- What you can control (focus here):
 - What you put in your mouth
 - Calories consumed and burned
 - How much you post
 - How many leads you contact
 - Time spent with family
- What Brandon dismisses as irrelevant noise:
 - Cold plunges, red light therapy, no-fap, making your bed, waking up at 3 a.m.

- "That's bro astrology — majoring in the minors"
- "Your fat cells don't care if you played with yourself or not"
- **"It's all math"** — calories in/out, income minus expenses, time invested in relationships

😊 Side Note: Happiness Is Your Own Responsibility 26:35

- Don't expect accomplishing goals — money, kids, a girlfriend — to make you happy
- "If something can make you happy, it can make you sad — which means you are not in control of your emotions, and that is irresponsible"
- Brandon's point: even when he was broke and wondering how he'd eat, he found ways to have joy; he's not meaningfully happier now being wealthy
- "Be happy AND make money — they're two separate subjects"
- Money's job: be exchanged for goods and services, not to babysit your emotions
- Your emotions are entirely your own responsibility

1 2 3 4 Tracking, Consistency Percentages & Weekly Reviews 28:54

- Track all leading indicators daily — posts published, leads contacted, family time, calories, macros, weight
- Do a **weekly review**: did I hit the inputs? How consistent was I?
- Consistency must be quantified as a **percentage**, not a feeling
 - If someone says "I eat right all the time" but actually hits their macros **70% of days** — that's the problem
 - "You don't feed your kids 70% of the time. You don't brush your teeth 70% of the time."
 - 70–80% consistency = "just enough to fail" and "just enough to say you tried"
- If you hit 70% one week:
 - Don't beat yourself up excessively, but don't accept it either
 - Ask: what specific changes will get me to 80% or 100% next week?
 - Understand exactly why it failed (the missing 20–30%) and make a concrete game plan
- **Mediocre mantras to eliminate:**
 - "Something is better than nothing"
 - "I did a little bit"
 - "I tried my best"
- Brandon's standard for himself: if he doesn't accomplish his daily goal list, he holds himself to a level of self-criticism he describes as "abuse if directed at a child" — very hard on himself, very lenient on others
- The moment you stop accepting inconsistency, it becomes easier to BE consistent

🏃 The Mediocre Marathon & Holding Yourself to a Higher Standard 34:41

- The **Mediocre Marathon**: the stretch from now through the holidays when almost everyone gives up
 - Halloween → Thanksgiving → office Christmas parties → Christmas → New Year's

- The common mindset: "I'll just wait until next year"
- This is actually your biggest opportunity — run over the competition while they're coasting
- The right response when you have a bad week:
 - Acknowledge it, hold yourself accountable
 - Ask: what do I need to change in my protocol to get back on track?
 - The failure may simply be a planning/estimation problem, not a character flaw
- Treat your life like a Fortune 500 business (Brandon interned at Abbott Laboratories during college, in their marketing and sales division):
 - Track every dollar/input
 - Measure, adjust, and optimize
 - Look at inputs and results every week and determine what to change
 - That's how billion-dollar businesses are built

Walkthrough: The Victory Vision Planner (Ambition Planner + Success Tracker) 36:18

- Free tool available via link in description: **Victory Vision Planner** (built in Notion)
- Two components:

Part 1: Ambition Planner (One-Time Tasks)

- Set up one column per quadrant goal (e.g., Make 10K/month, Lose 20 lbs, Buy mom a car, Get a girlfriend)
- Under each goal, list all **one-time tasks** required:
 - Wealth example: Start LLC, Get EIN number, Open business banking account, Develop marketing plan, Start posting content, Reach out to 100 clients
 - Health example: Get gym membership, Get personal trainer, Get diet plan, Get workout plan
 - Family example: Research car cost, Find out down payment, Save up funds, Deliver car to mom (goal: Christmas Day)
 - Romantic example: Lose 20 lbs first, Join Pilates class, Join salsa club, Buy dating/game coaching
- Assign a **deadline date** to every task
- Estimate **how long each task will take** (can use Notion AI to speed this up)
- Use **Gemini** (or Claude, ChatGPT, Grok) linked to Google Calendar to automatically schedule all tasks:
 - Prompt Notion AI with your task list and due dates → it proposes a schedule → confirm → events auto-populate in Google Calendar
 - Brandon demonstrated: tasks appeared correctly across the next several weeks in Google Calendar
- Color-code by status: Not Started / In Progress / Done
- View filters: by month, by week — lets you see exactly what needs to happen and when

Part 2: Success Tracker (Recurring Tasks)

- Tracks daily leading indicators with fields for:
 - **Income goal** (lagging result — visible for reference)
 - **Sleep hours**
 - **Hours worked on money goal**
 - **Calories consumed** (auto-calculated from protein, fat, carbs inputs)
 - **Calories burned** (from Oura Ring or Apple Watch)
 - **Caloric surplus or deficit** (auto-calculated)
 - **Weight** (entered daily)
 - Additional custom leading indicators you define
- Interactive charts: income trend line, weight trend line — update in real time as you enter data
- The beauty: you can see at a glance whether you're trending in the right direction and make data-driven adjustments
- Brandon's instruction: **use both sheets every day for 100 days**

Free Resources & Closing 44:20

- **Victory Vision Planner**: free download, link in description
- **Free live training this week**: growing an online fitness business using AI
 - How to use AI to grow your following, get clients, and train clients for better results
 - Brandon has trained **over 15,000 people** in online fitness business growth
 - Free AI tools for content ideas, scripts, hooks, and video editing included
 - Live Q&A before, during, and after
 - Suitable for beginners, established trainers, and the uncertified
 - Register via link in description
- Goal if followed: making an extra **\$300–\$500 per day** as an online trainer
- Brandon's first million was made as an online trainer
- Closing promise: "If you do this for the next 100 days, I promise you, you will succeed. It's going to be very difficult to fail under these circumstances."
