

We Ran a 40 Year Old's Tinder (Here are His Results)

Channel: Deni Ops · Published: Aug 06, 2026 · Watch: <https://www.youtube.com/watch?v=bqvBnqLMDAs> Source: full transcript

Executive Summary

Deni Ops took over a 40-year-old man's Tinder account from scratch — redesigning his photo lineup, handling all messaging, and planning dates — turning years of zero results into a flood of matches and real-world dates.

Client Background: Who Is Tom? 0:00

- Tom is a 40-year-old man who had been in a long dry spell — very few dates over roughly 5 years
- He had never used Tinder, Bumble, or Hinge before this engagement
 - Literally started from zero — no profile, no photos, no knowledge of how the apps work
- He is described as not being in the best shape physically
- After working with Deni Ops: "Here in the last 2 months, I've been on more dates than I have in probably the last 5 years"
- Key assets Tom did have coming in:
 - A motorbike (described as a super sport bike)
 - A vintage Corvette with an exotic color
 - A guitar he actually plays

Before: The Starting Point 0:22

- Tom had exactly **one photo** on his profile when they began
 - The photo was taken when he was noticeably younger

- Despite its age, it was assessed as a solid photo: good posing, candid and natural feel, centered in frame, looked professionally taken
- It featured his motorbike — described as high ROI "bike appeal"
- The single photo could have used some facial editing but was otherwise decent
- Core problem: men over 30 typically stop taking photos, leaving them with almost nothing usable for dating profiles
- Because this was pre-AI photo era (~18 months before the video was published), they had to shoot real photos from scratch

Step 1 — Transforming the Photos 1:28

- The team sent Tom specific guidance on what types of pictures to take — covering:
 - Posing
 - Angles
 - Lighting
 - Overall aesthetic
- Physique enhancements were applied via Photoshop (not AI — this was ~18 months prior to the video)
- Deni's current recommendation is **AI-generated photos**, which he says have replaced real photos on his own profiles entirely (including his Instagram)
 - Claims a comparison case: Leon, another 40-year-old client who used AI pictures, got **300+ likes in 2 days** vs. Tom's 25 likes/day with real photos
 - Both men were rated roughly equivalent in looks — the difference was entirely the photo technology
- For those who still want real photos:
 - Use Pinterest and Instagram to find aesthetic male photo inspiration
 - Watch posing tutorial videos (shout-out given to a channel called "On Point Fresh" as a learning resource, though noted as somewhat outdated)
- "If you can get results with real pictures back then like that, imagine how crazy results are going to be with AI pictures."

Photo-by-Photo Breakdown (After) 2:57

- **Photo 1 — Shirtless lake shot**
 - Candid posing, looking away from camera ("first trap shot" style)
 - By the lake, good body language
 - Physique enhanced with Photoshop
- **Photo 2 — Sofa/TV shot**
 - Casual pose on the sofa as if watching TV

- Sells the lifestyle fantasy: "Netflix and chill" vibe
- Good clothing/style on display
- Whiskey glass in hand — framed as a masculine, relaxed trait
- **Photo 3 — Guitar photo**
 - Candid shot, looks like he's actively playing
 - Described as having "super sexual appeal" and being very powerful
 - Strategic value: gives girls a conversation opener to message him first
 - Creates a natural date idea: he could teach her a song or play for her
- **Photo 4 — Car shot (Corvette)**
 - Smiling in this photo — noted as a positive and a "leverage move if you can pull it off"
 - Features his vintage Corvette; the exotic color made it visually striking
 - Positioned as a high-status photo
- **Photo 5 — Bike photo**
 - Used the existing motorbike photo from his original profile
 - Minor facial Photoshop applied
- **Photo 6 — Pool shot**
 - Candid photo at a pool
 - Strategically useful in texting sequences — leads naturally to suggesting a pool date
- **Photo 7 — Bar selfie**
 - A clear selfie showing his real-world face
 - Signals he's a social person with a life outside of work
 - Now considered **essential** for passing "face check" on apps — without a clear selfie, profiles can be flagged or blocked as potential catfishing
 - Back when this was taken, a selfie wasn't required, but included anyway

Step 2 — Running the Account [5:37](#)

- Once the profile was live, Deni Ops team took direct control of account management
- Results timeline:
 - **25 likes in the first day**
 - Continued to snowball and explode within **48 hours**
- The team handled everything on Tom's behalf:
 - Analyzed each match's profile: context, personality traits, interests
 - Wrote and sent all messages
 - Planned the dates
 - Passed Tom phone numbers and told him exactly when and how to proceed
- Tom's only job: show up to the date

- Ran his WhatsApp as well — numbers kept coming in steadily, and girl quality improved over time
- Tom became so busy he was canceling check-in calls because he was occupied with women
- Messaging framework philosophy: **text only for sexual ascension or logistics** — nothing else

 Tom's Testimonial Highlights 5:15

- Before: approximately **10 matches total** before the overhaul
- After: dramatically more matches and consistent dates
- "Going from not really pulling anybody and then pulling a lot — it's a big difference"
- On working with the team: "You really do seem to care whether I succeed or not, and that is very important to me"
- On learning the frameworks: "I can't believe it's this easy. I literally had a moment where I was like, it never occurred to me to do something like that — mind-blown"
- Referenced the "teach a man to fish" principle — he was taught the frameworks, not just handed results

 AI Pictures vs. Real Pictures: The Key Comparison 6:22

- Two 40-year-old clients compared side by side:

	Tom (Real Photos + Photoshop)	Leon (AI Photos)
Age	40	40
Looks rating	Roughly equivalent	Roughly equivalent
Likes in 2 days	~50 (25/day)	300+
Photo method	Real photos, Photoshop edits	AI-generated images

- Deni now uses AI photos exclusively on his own Hinge and Instagram profiles
- Teases a future video showing his Hinge profile with "thousands of girls" currently matched
- His conclusion: AI pictures are the decisive competitive advantage in modern dating apps

 Step 3 — How You Can Replicate This 7:52

- Three-step framework to replicate Tom's results:
 - **Step 1 — Photos:**
 - Option A: Copy aesthetic poses from Pinterest or Instagram
 - Option B: Use AI-generated photos (recommended; can be done through Deni Ops or independently)
 - **Step 2 — Texting:**
 - Use the team's messaging frameworks
 - Only text for two purposes: sexual ascension or logistics
 - Nothing filler, nothing casual — keep it tight

- **Step 3 — Dates:**
 - Just go on the dates
 - Don't stress about early mistakes — volume and practice improve performance
 - "Don't worry if you mess up the first few, you'll get many more with practice"
- To get the full done-for-you service:
 - Book a call via the link in the description
 - Or message directly on WhatsApp using the number provided
- Deni mentions he's entering "freshers season" and plans to document more of his own dating activity, including dash cam footage from dates
