

WARNING: Meta Muse Is a Business Cheat Code

Channel: Brandon Carter · Published: Oct 06, 2026 · Watch: <https://www.youtube.com/watch?v=aPP8HWnEyVc> Source: full transcript

Executive Summary

Brandon Carter demonstrates how MetaMuse (Meta's free AI agent) can power an entire one-person service business — handling niche research, competitor analysis, content planning, lead generation, sales prep, follow-up, and client fulfillment with little to no staff.

Introducing MetaMuse and Why It Beats Other Agents 0:00

- Brandon has built several 7-figure businesses and one 8-figure business and has helped over 15,000 people build online fitness businesses over 15+ years
- MetaMuse is described as "one of the most powerful softwares I've ever seen" and "definitely the most powerful free software I've seen"
- Other agents mentioned for comparison:
 - Grankbot
 - ChatGPT
 - Hermes
- MetaMuse wins on three criteria:
 - Simplest to set up
 - Completely free

- Deep native integration with all Meta platforms (Instagram, Facebook Messenger, WhatsApp)
- Brandon customized his Muse agent as a hip-hop robot named **Tyrone**
- Key capability overview — Muse can handle:
 - Market and competitor research
 - Content creation
 - Sales and follow-up
 - Project management
- The video covers only real strategies Brandon is actively using in his own businesses, not theory

Why Start a Service-Based Business 1:58

- **The #1 reason businesses fail: running out of money** — low overhead makes failure far less likely
- Service businesses have structural advantages over product businesses:

Factor	Service Business	Product Business
Startup cost	Low	High
Overhead	Low	High
Inventory	None	Required
Office needed	No	Often yes
Shipping	None	Required

- Brandon's first business was online personal training, started 2009–2010 — he ran it alongside multiple other jobs because overhead was so low
- You don't have to quit your job to start a service business
- Example service businesses you can run online:
 - Video editing
 - Web development
 - Tech support
 - Accounting/bookkeeping
 - Social media management and growth
 - Tutoring
 - Running ads (Instagram, Facebook, YouTube, Google)
- Muse keeps overhead even lower by replacing hires: "When they say AI is taking jobs, they're right."
- **First step using Muse — business idea interview prompt:**
 - "Hey Muse, I need to start a service-based online business. I'm not really sure what to pick, so I need you to interview me. Ask me one question at a time until you have enough information about me to make some good suggestions."

- Before running this prompt, **link all social media to Muse** — Instagram, Instagram Messages, Facebook, WhatsApp — because Meta owns all of them and Muse gains immediate context about you
- Always instruct any LLM to ask questions **one at a time** — two reasons:
 - A large block of questions is intimidating and people skip it
 - Sequential questions produce better follow-ups because each answer provides context for the next question, resulting in far superior outputs

🎯 Niching Down: The Three-Part Framework 3:45

- "Fitness niche" or "business niche" is NOT specific enough — you must go deep
- The three-part niche framework:
 - **Part 1 — Target Market (Who):** Exactly who you want to serve
 - Brandon's example: men aged 25–35
 - Men and women respond differently to marketing; narrowing lets you calibrate tone, language, and content
 - Being able to be "more abrasive" and use stronger language worked for his male audience; older audiences or women would have rejected it
 - **Part 2 — Problem/Specialty (What):** The specific problem you help them solve
 - Brandon's example: getting ripped (muscular + low body fat)
 - He excluded obesity, powerlifting, pro athletics, and general health even though he had experience in all of them
 - **Part 3 — Unique Mechanism (How):** Your specific method for solving that problem
 - Brandon's example: intermittent fasting + HIIT (high-intensity interval training)
 - With this mechanism, he wasn't competing with every fitness trainer — "you probably can't name five trainers who focus primarily on helping men aged 25–35 get ripped with intermittent fasting and HIIT"
 - Narrow niche = no price shopping because few competitors exist
- **Case study — Jen Caesar (HTT community member):**
 - Who: busy moms
 - Problem: lose fat and get toned
 - Mechanism: at home (always filming at home, kids visible, husband featured)
 - Background: full-time nurse, two kids, a husband, very limited time
 - Result: **\$500,000 in her first year** doing it part-time
 - Quote from Jen: *"I was working 40 hours at my full-time job and posting every single day. November, I only worked 2 weeks and I made 48 grand in November."*
- **Brandon's own niche for comparison:**
 - Who: trainers or fitness enthusiasts
 - Problem: start or grow their online fitness business
 - Mechanism: using AI

- This way he doesn't compete with Russell Brunson, Alex Hormozi, or Tony Robbins
- **Niche example for ad runners:** "I help chiropractors make money from Instagram ads" + a specialized strategy = unique mechanism
- **Muse prompt to find your niche:**
 - "Hey Muse, I want to start an online business. I need you to help me narrow down my niche. I need to figure out exactly who my target market is going to be. I need you to help me figure out what problem I'm going to focus on helping that target market solve. And once we have that, I need you to help me figure out the unique mechanism that I'm going to use to help the client get that result. Keep asking me questions one at a time until you have enough information to give me three potential options."

Competitor Research with MetaMuse + Instagram Integration 7:59

- **Case study used: Corey Armstrong (@CoreyArmstrongFit)**
 - Niche: helps men 30+ lose fat by optimizing their hormones naturally
 - Background: in-person trainer in Detroit, never did anything online, was "broke living in the Detroit ghetto"
 - After joining Brandon's HTT program: now makes **over \$400,000/year** as an online trainer, grew from under 2,000 to over 300,000 Instagram followers, ~400,000 YouTube subscribers
 - Quote: *"Last year was a record year, man. We finished at \$470,000."*
- **Competitor research prompt:**
 - "I have a community member... His name is Corey Armstrong. His IG is @CoreyArmstrongFit. He focuses on helping men over 30 lose fat by optimizing their hormones. I want you to look on Instagram for his top five competitors. Find them for me and explain to me why you've chosen them."
 - This exploits Muse's **native Instagram integration** — it actually searches Instagram profiles
- **Follow-up prompt to analyze competitor content:**
 - "Search each one of their profiles over the last 90 days and tell me their top performing reels. Once you have that, give me the topics they focus on, the hooks they use, and what formats they are using. Give me a detailed comprehensive breakdown of each one individually, then loop them all together. Give me suggestions on the type of content, hooks, and formats Corey should use so he can grow his following the fastest."
- **Output from Muse:**
 - Full breakdown of each competitor's top reels
 - How many reels posted in last 90 days
 - Topics, hooks, and formats used (talking heads, podcast clips, workout demos)
 - Key insights and takeaways
 - A weekly content system and calendar for Corey
 - Ready-to-shoot hooks **written in Corey's voice** (because it also analyzed his own page)
 - A 90-day action plan
 - What NOT to do

- **Artifact/deliverable feature:**
 - Muse can package all of this into a PDF artifact
 - Brandon then said: "DM this to Corey on Instagram right now, telling him I put this together for him"
 - Muse drafted the DM, created a public download link (expires in a few days), and sent it from Brandon's Instagram account automatically
- Key insight: organic posts that perform well tend to make the **best ads** — Muse's competitor content analysis thus directly informs paid ad strategy too

Building a 30-Day Content Strategy 11:32

- Going deeper than just competitor research — building a full content strategy
- **Prompt used:**
 - "Build a 30-day content strategy for Corey based off the data we compiled today. Identify the top content pillars he should focus on. The problems his target market talks about most frequently. All the hooks he should use and the different formats he should use based off what's working for his competitors. What posting frequency he should adopt based off his top competitors' frequency. I want a balance of education, authority, story, proof, and promotion. Create a 30-day plan for him."
- **What Muse delivered — based on analyzing 328 reels from top competitors:**
 - Content pillars (e.g., "Hormone Truth Bombs")
 - Hooks credited to which competitors they're modeled after
 - Hook categories:
 - Contrarian hooks
 - Pain-point hooks
 - Curiosity hooks
 - Identity hooks
 - Proof hooks
 - Promotional hooks
 - Format rotation: talking head, explainers with on-screen steps, podcast-style conversation clips, real-world vlogs (e.g., grocery store), workout demos
 - Full 30-day content calendar
 - Promotional plan
 - All openers/hooks written **in Corey's voice**
- Muse then DM'd the full strategy to Corey on Instagram automatically

"The company that owns Instagram just told you what to post to grow." This is the core competitive advantage of Muse — Meta's AI directing you based on Meta's own platform data.

The Profit PDF: Turning Content Into Leads 11:51

- **The strategy:** Post content with a CTA like "Comment [word] and I'll send you a free guide"
 - When someone comments, they receive an automated DM with the free guide
 - Most creators use automated DM tools — not manual
- **Tool recommendation: Go High Level** (over ManyChat)
 - Go High Level has a **native integration with Muse**; ManyChat does not (at time of recording)
 - ManyChat is also described as "kind of expensive"
 - Free 30-day trial available via link in description; signing up through Brandon's link also gives all his templates
- **The smart upgrade — collect email before delivering the guide:**
 - Even if they ghost in DMs, you can still follow up via email
 - This is what Brandon calls the **"Secret Sales Funnel"**
- **Case study — Kelly Nicole Fit (HTT community member):**
 - CTA examples: "Comment MACROS and I send you the free macro calculation" / "Comment FAT LOSS and I send you my free 10-step guide"
 - **415 people** commented on those posts to get the guide
 - Background: college senior, no real trainer experience, no significant online income
 - Goal: make enough money before graduation to avoid a traditional job
 - Result: **\$20,000/month by age 23** within 6 months of joining HTT
 - Quote: *"I was a marketing major and I learned more stuff in this program than I did in my major itself."*
- **How Muse creates the Profit PDF for you:**
 - Prompt example (using Kelly's account):
 - "I have a community member named Kelly Nicole Fit. This is her Instagram. Analyze her page and help her come up with a free guide — whether a checklist, grocery list, or something — that would help her clients accomplish their goals and can be used as a CTA in her videos. Give me a list of 20 ideas based off her content and her target market."
 - Sample ideas Muse generated: grocery list and food guides, elite physique daily checklist, 14-day stall audit, **wedding shred checklist** (it noticed Kelly was about to get married), macros calculator starter guide
 - Follow-up prompt to build the actual PDF:
 - "Make a PDF of the wedding checklist. Show me the table of contents first. Base it 100% off stuff she actually says and advice she gives on Instagram. Write it in her voice. Use colors that resonate with her brand. Make it aesthetically pleasing."
 - Muse analyzed the **last 90 days of her reels** to pull her actual advice, her story, and her exact phrasing
 - Then built the full PDF with a **clickable 'book a call' link** pulled from the link in her Instagram bio
 - Output: "Bride Shred Checklist" — branded, functional, with working CTA link

- Full funnel flow:
 - Step 1 — Content post with keyword CTA (e.g., "Comment FAT LOSS")
 - Step 2 — Automated DM sent via Go High Level
 - Step 3 — Collect name and email via a simple opt-in page (built in Go High Level)
 - Step 4 — Thank-you page with three options ONLY:
 - Watch the VSL (Video Sales Letter) explaining the lead magnet
 - Download the free guide/prompts
 - Book a call
 - Step 5 — VSL pitches coaching: "If you want more help, click the button below and book that call"
 - Step 6 — Calendar booking (built in Go High Level)
- **Why Go High Level for lead organization:**
 - Instagram DMs become one long unorganized thread — unusable at scale
 - Go High Level's pipeline/opportunities view categorizes leads:
 - New leads
 - In conversation
 - Booked calls
 - Closed
 - Lost
 - Need follow-up
 - From GHL, you can message leads via Instagram, text, or email, and set up automations for all three
- **Muse + Go High Level integration:**
 - Muse can control Go High Level directly via native connector
 - Example prompt: "Search my Go High Level account, find all leads that came in over the last 24 hours. Over the last 90 days, find leads that need to be followed up with who may have slipped through the cracks. I want to send them text messages to re-engage them."

AI Tools as Lead Magnets (The Ripped Road Map) 17:51

- Instead of a PDF, offer an **interactive AI tool** as the lead magnet — Brandon considers this superior
- **Example: The Ripped Road Map**
 - User inputs: age, weight, height, goal, photo of themselves
 - AI analyzes physique, estimates body fat percentage, calculates how much fat to lose, outputs a personalized game plan (protein targets, calorie targets, adjustable carb/fat macros)
 - Before showing results, it captures: **name, email, and phone number**
 - After results: another VSL + "Book a Strategy Call" button
- Brandon also built:
 - Macro calculator

- Meal plan generator
- Multiple other tools
- **Built using Go High Level's AI Studio** (similar to Lovable) — free during the 30-day trial
- Can **migrate existing projects** from Lovable or similar tools into GHL AI Studio
- Signing up via Brandon's link includes: all his templates, websites, automations, and your own customizable version of the Ripped Road Map

Personalized Sales Scripts with MetaMuse 19:07

- Instead of a generic sales script, use Muse to build a **personalized dossier** on each prospect before every call
- **Full prompt used:**
 - "Find the sales call on my calendar tomorrow. Go through Go High Level. Find out everything we can about this person — conversations via GHL, what funnel they came through, what lead magnet they downloaded. Then go to that person's Instagram profile. Go through our DM conversation with them. Gather all that information. Write a one-page summary of their goals, dreams, aspirations, personal life, family orientation, music preferences, sports teams — any information we can include. Pull out all the pain points and goals. Write a script that puts my rep in the best position to succeed."
- **What Muse produced:**
 - Found the lead, pulled his Instagram, his profession, his bio, his goals
 - One-page brief covering: what he said in DMs, his Instagram content, what funnel he came through, his goals, pain points
 - A call script **made specifically for that rep (Ethan)** based on everything gathered
- Brandon trains sales reps by reviewing recorded sales calls and doing role plays — he now instructs all reps and HTT community members to use Muse for pre-call research
- **"When you start doing that, your close rate is going to increase."**
- **Sales call improvement loop:**
 - Use a call recorder/transcriber: **Granola** or **Otter** (both integrate with Muse)
 - After each call, Muse reviews the transcript, critiques performance (win or loss), and gives tips for improvement
 - Muse effectively becomes a **personal AI sales trainer** reviewing your calls daily
 - Brandon previously did this with ChatGPT + Fireflies: "Download all sales calls from yesterday, grade each one, send the report to the team in Slack"

Follow-Up Automation and Lead Management 20:54

- Muse monitors both Go High Level and Instagram DMs for leads that have gone cold
- **Instagram DM sweep prompt:**
 - "Go through my Instagram DMs and find potential leads for High Ticket Trainer"

- Muse finds leads, flags ones that slipped through, drafts re-engagement messages, and asks permission before sending
- **Nightly automation Brandon set up:**
 - "Every night, go through my Instagram DMs and find potential leads that may have slipped through the cracks."
 - Muse runs this automatically, surfaces new leads daily, sorts by **hot / warm**
- Brandon's rule: **never have Muse auto-send messages** — he reviews what it drafts and approves or edits before sending
 - "I feel like that's weird and I want to know what's going on."
- The system functions as an AI sales manager — monitoring calls, DMs, and GHL simultaneously so **no lead is left behind**

✓ Client Fulfillment and Project Management [21:43](#)

- **For online fitness clients:**
 - Give Muse access to whatever training/nutrition platform you use (even without an official connector, Muse has its own browser and can log in)
 - Example: "Who has not logged their macros yesterday?"
 - Muse can then draft personalized check-in messages to non-compliant clients
- **For high-ticket business consulting clients:**
 - Brandon uses **Notion** as a project management board
 - After each meeting, Muse receives the transcript and:
 - Fills out the Notion database with tasks, owners, and deadlines
 - Writes a description of each task based on what was discussed
 - Each client gets their own dedicated Muse chat
 - Every morning and night, Muse reviews emails, messages, and the Notion board
 - When a client reports completing a task, Muse **automatically updates the Notion card** to "done" or advances the status
 - If a client is falling behind, Muse flags it to Brandon AND messages the client
- Key benefit: accountability records — if a client says "this isn't working," Muse has the full log showing exactly what was and wasn't done
- Works for any service business: consultant, agent, designer, coach
- "When I get a client, I refuse to let them fail because you can't be out here messing up my impeccable reputation. I've been coaching for 15 years straight."

🧩 The Full One-Person Business Loop Recap [23:37](#)

- Everything covered in the video forms a complete business operating system run by one person + one free AI tool:
 - Figured out your niche (Muse interview)
 - Did market and competitor research (Muse + Instagram integration)
 - Built content strategy based on what's already working (Muse competitor analysis)
 - Created a Profit PDF or AI tool lead magnet (Muse + GHL AI Studio)
 - Generated and organized leads (Muse + Go High Level pipeline)
 - Made personalized sales scripts and improved close rates (Muse + call recorders)
 - Automated follow-up so no lead falls through (Muse nightly DM sweep)
 - Delivered and tracked client results (Muse + Notion/training platforms)
- **Two free tools to get started:**
 - MetaMuse — free, sign up and customize your agent
 - Go High Level — free 30-day trial via link in description; includes all of Brandon's templates, automations, websites, and the Ripped Road Map
- Free live training also advertised: Brandon will analyze social media profiles, answer questions live, and give away free AI tools for scripting, content ideas, and video editing
