Plan a Full Month of Content in Under an Hour With AI

Channel: Brandon Carter · Published: Oct 13, 2026 · Watch: https://www.youtube.com/shorts/c3sNbxfa8-k Source: full transcript

📋 Executive Summary

Brandon Carter outlines a 4-step AI-powered content system — using MetaMuse and Claude — to plan, script, batch-film, and edit a full month of content, replacing ~20 hours of weekly effort with one efficient workflow.

📑 Contents

- 🛠️ Step 1: Research What's Working With MetaMuse
- ✍️ Step 2: Generate Scripts in Your Voice
- 🎬 Step 3: Batch-Film Everything in One Day
- 🤖 Step 4: Edit With Claude (Clau) AI

🛠️ Step 1: Research What's Working With MetaMuse 0:00

- Open **MetaMuse** and enter a research prompt
  - MetaMuse ("Muse") is owned by Meta — the same company that owns Instagram
  - Because of this ownership, it is the only platform with a native Instagram integration
  - It is free to use
- The tool returns a full breakdown of what content is actually performing well in your niche
  - This replaces the manual research phase that typically eats up significant time

✍️ Step 2: Generate Scripts in Your Voice 0:22

- Insert a second prompt into MetaMuse to generate scripts
- Because Muse is already connected to your Instagram account, it already knows how you write
  - It produces scripts written in your voice
  - Scripts are based on your competitors' top-performing content
- Important ethical framing: "We're not going to steal"
  - The approach is to take proven ideas, remix them, and make them your own
  - Inspiration from what works, not copying

🎬 Step 3: Batch-Film Everything in One Day 0:36

- Pick **one day per week** and film all content for that week in a single sitting

- Eliminates the daily decision fatigue of figuring out what to post each morning
  - No more waking up every day trying to figure out what to post
- Batching keeps you in a filming mindset and dramatically compresses time spent on production

🤖 Step 4: Edit With Claude (Clau) AI 0:46

- Upload all footage into **Clau** (Claude) and let the AI handle editing
- Brandon's personal usage stats:
  - Edits **90%** of his short-form content with AI
  - Edits **100%** of his long-form content with AI
- This covers the full pipeline: research → scripting → filming → editing

> Most trainers spend around **20 hours a week** on content — this system is designed to collapse that into under an hour.
