AI Edits All My Content in 10 Minutes

Channel: Brandon Carter · Published: Oct 13, 2026 · Watch: https://www.youtube.com/shorts/pvpC2ZqFjDY Source: full transcript

📋 Executive Summary

Brandon Carter shows how he trained an AI tool (Claude Cole) on his top-performing videos to learn his personal editing style, letting him hand off raw footage and get a finished video back in ~10 minutes.

📑 Contents

- 🚨 The Problem with Most AI Editing Tools

- ⚙️ What the AI Does Automatically
- ⏱️ Why This Matters for Growth and Revenue

🚨 The Problem with Most AI Editing Tools 0:00

- Most AI editing tools produce low-quality output that fails to drive real engagement
  - Common issues called out:
    - Generic, overused text styles
    - Random, poorly chosen cuts
    - Text animations flying around in ways that look silly
  - The core complaint: the results don't look like *you* — they look like a template

🧠 The Different Approach: Training the AI on Your Style 0:21

- Brandon fed **Claude Cole** a collection of his best-performing videos as training material
- He asked it to analyze his editing style in precise detail across four dimensions:
  - When to cut footage
  - How to format on-screen text
  - Where to use zoom/push-in effects
  - What to always keep vs. always remove
- Once the AI learned his preferences, the workflow became:
  - Record raw footage
  - Hand the raw file to Claude Cole
  - Walk away — no manual editing required

⚙️ What the AI Does Automatically 0:21

- After receiving the raw footage, Claude Cole handles every editing task:
  - Cuts all silent gaps and pauses
  - Removes repeated takes and flubbed lines
  - Adds on-screen text/captions
  - Pulls B-roll cutaway shots from Brandon's existing file library
  - Applies all motion graphics and animations
- Brandon shows a side-by-side comparison in the video: raw footage vs. the finished, AI-edited version

⏱️ Why This Matters for Growth and Revenue 0:43

- Brandon frames content editing as **the #1 reason** most creators don't post enough
  - Posting infrequently directly stunts audience/follower growth
  - It also causes creators to miss out on potential clients
- The opportunity cost argument:
  - Every hour spent editing is an hour *not* spent on client acquisition or delivering coaching
- The implied takeaway: automating editing with a style-trained AI frees up high-value time for revenue-generating work
