

Food swaps

Channel: Brandon Carter · Published: Jul 16, 2026 · Watch: <https://www.youtube.com/shorts/FdAP-QmTA64> Source: full transcript

Executive Summary

Brandon Carter runs through four popular steak cuts and suggests a leaner swap for each, helping viewers reduce caloric intake without sacrificing satisfaction while trying to get lean.

Contents

-  Swap 1: Ribeye → Sirloin
-  Swap 2: Porterhouse → Filet Mignon
-  Swap 3: Prime Rib → New York Strip
-  Swap 4: T-Bone → Top Sirloin
-  Free Summer Guide CTA

Swap 1: Ribeye → Sirloin [0:00](#)

- **Ribeye** is described as a personal favorite cut but flagged as fatty and high in calories
 - Its fat content makes it calorie-dense, which works against a cutting phase
- Recommended swap: **Sirloin**
 - Less calorically dense than ribeye
 - Still described as filling and delicious

Swap 2: Porterhouse → Filet Mignon [0:09](#)

- Porterhouse is flagged as a cut to avoid when trying to cut body fat
 - Reason: it is a fattier cut with way more calories
- Recommended swap: **Filet Mignon**
 - Described as a leaner cut of beef
 - Implied to be more suitable for a caloric deficit

Swap 3: Prime Rib → New York Strip [0:22](#)

- Prime rib is acknowledged as delicious, but the reason it tastes so good is its super high fat content
 - Higher fat = significantly more calories compared to leaner cuts
- Recommended swap: **New York Strip**

- Cited as a leaner cut with fewer calories than prime rib

Swap 4: T-Bone → Top Sirloin 0:35

- T-bone is replaced rather than consumed when the goal is leanness
- Recommended swap: **Top Sirloin**
 - Described as a way leaner cut with way less calories
 - Still filling and delicious per Brandon's assessment

Free Summer Guide CTA 0:44

- Brandon offers a free guide for getting in the best shape of your life that summer
 - To receive it: comment the word "**summer**" and he will send it directly to you
