

Get Rich And Ripped in 2026 EP 316

Channel: Brandon Carter · Published: Jul 17, 2026 · Watch: <https://www.youtube.com/watch?v=OMAK1wezq7U> Source: full transcript

Executive Summary

Brandon Carter delivers a high-intensity motivational framework for getting rich and ripped using five habits — being an extremist, tracking everything, enjoying sacrifice, choosing the right partner, and raising standards — paired with a practical options-trading primer on call spreads from certified trader Greg.

The Connor Murphy Story: Extreme Effort as the Foundation [2:17](#)

- Brandon opens by honoring Connor Murphy, a fitness creator he worked closely with who passed away the week of recording
 - They managed Connor's fitness business together as a team for several years
- First time they met at a restaurant in Texas (Connor was in college there), both independently pulled out food scales at the table
 - Brandon: "It's very rare to meet somebody who's doing that — even within the fitness industry"
 - Connor tracked condiments: weighed ketchup, barbecue sauce, everything
- Brandon asked Connor: "What do you do on a day where you don't hit your macros or calories — do you make up for it the next day?"
 - Connor's response: "Yeah, that doesn't happen. I'm going to hit my macros and my calories every day."
 - Brandon: "That's what the fuck I'm talking about"
- Both were accused of being on steroids while fully natural at the time

- Brandon later went on **testosterone replacement therapy at age 40** (he is now 43); Connor reportedly didn't even drink or smoke
- The lesson: they were getting results others thought were impossible simply because they were doing things others weren't doing

The Core Philosophy: Make Failure Impossible 8:42

- The wrong question: "What do I have to do to accomplish this goal?"
 - This level of effort may cause you to miss — like trying to swat a bug, you might not hit it
- The right question: **"How much effort would I have to put in to make failure impossible?"**
 - The analogy: seeing one bug and fumigating the whole house vs. trying to swat it — fumigation is guaranteed
- Guitar teacher quote: *"Amateurs practice till they get it right. Professionals practice till they can't get it wrong."*
 - Apply this to every goal: practice/work until missing the goal is the hard part
- Larry Bird story: filming a McDonald's commercial where he had to **miss a free throw** — it took many attempts because he'd practiced making it so much that missing was difficult

"Put in so much effort that missing the goal would be hard. That's what you need to do."

- When your plan is intense enough, people around you will say you're crazy, doing too much, need to relax
 - "Those are the battle cries of the mediocre"
 - "If no one's telling you you're going too hard, that means you're not going hard enough"
- Three-step framework:
 - Step 1 — Pick one goal each in health/fitness, wealth/money, and relationships
 - Step 2 — Build a plan where failure is impossible (it will look way more intense than anything you've done before)
 - Step 3 — Ask yourself honestly: "Do I want it this bad?" — your behavior will answer the question, not your words
- Promise: **"In 90 days, your whole life can change.** But that's what it's going to take."

Options Trading Masterclass: Calls, Puts, and Spreads 23:41

- Co-host **Greg** joins — credentials:
 - 10 years trading options
 - Certified options trader by TDI Trade (now merged with Charles Schwab)
 - **Chartered Market Technician (CMT)** — professional analyst for forecasting securities
 - Series 65 license — qualifies him to manage money once registered with SEC

- *Disclaimer: nothing discussed is financial advice; strictly educational*

What Is an Option?

- An option derives from an underlying asset (e.g., a stock)
- Buying stock: you profit when it goes up, lose when it goes down — one dimension
- Options add complexity: you must be right on **direction**, **magnitude**, and **time frame**
- Two types:
 - **Call** — buy when bullish (think stock goes up a lot)
 - **Put** — buy when bearish (think stock drops a lot)
 - You lose money on both if the stock goes **sideways** (when buying single calls/puts)
- Key benefits of options vs. stock:
 - Leverage: control ~100 shares for a fraction of the cost
 - Defined max loss — you can't lose more than you put in (unlike shorting)
- Key risk: options have an **expiration date** — you must be on point with timing
- Common failure pattern: new traders buy out-of-the-money calls/puts, lose 100%, enter gambler's mindset, revenge trade, blow up account

Simple Call Example — Microsoft

Parameter	Value
Ticker	MSFT
Expiration	August 28th
Strike Price	\$390
Stock Price at Trade	\$401 (in the money)
Cost of 1 call option	~\$2,522
Cost of 100 shares outright	~\$39,000

- Benefit: controls 100 shares of MSFT for \$2,522 instead of \$39,000
- Unlimited upside if stock keeps going up
- Con: if MSFT goes sideways or down, the \$2,500 decays quickly to zero

Option Spreads — The Core Lesson

- A **spread** = buying one call AND selling another call (same expiration, different strikes)
- This structure dramatically changes the risk/reward profile

Feature	Single Call/Put	Option Spread
Cost	~\$2,500 (MSFT example)	~\$240 (same setup)

Feature	Single Call/Put	Option Spread
Max loss	Full premium paid	Full premium paid (but much less)
Upside	Unlimited	Capped (max gain)
Theta (time decay)	Works against you hard	Smoothed out significantly
Sideways market	Losing money	Manageable / neutral
Volatility exposure	High	Reduced
Best for	Large explosive moves	Moderate directional moves
Account size fit	Larger accounts	Small accounts (<\$1,000)

- Microsoft spread example breakdown:
 - Bought the 390 call: up \$416
 - Sold the other call: down \$388
 - Net gain: +\$26 (gain is capped, but cost was only \$240)
- **Volatility hierarchy** (lowest to highest):
 - Shares → Call/Put Spreads → Single Options

Pros of Spreads

- Lower cost entry
- Defined risk
- Less theta (time decay) damage
- Works if stock goes sideways (especially if spread is in the money)
- Better capital efficiency — great for small/beginner accounts
- More consistent returns; less wild swings

Cons of Spreads

- Profit is **capped** — no unlimited upside
- Harder to enter/exit (two-legged trade) — not ideal for day trading
- Slightly more complex for beginners

When to Use Each Strategy

- **Use a single call or put when:**
 - You expect a very large, explosive move
 - You have very high conviction
 - Implied volatility is cheap
 - Example: Microsoft breaking out on volume — Greg bought regular calls for 200–300% gain in a day or two

- **Use a spread when:**
 - You expect a moderate move (not necessarily 20–40% up)
 - Your entry may not be perfect
 - You want lower cost and reduced risk
 - You don't want to watch charts all day
 - You prefer consistent risk/reward
 - Account is under \$1,000
- Preferred spread assets: liquid large caps — **Microsoft, Google, Amazon, SPY, QQQ, NASDAQ**
- Greg's routine: "First 2–3 hours in the morning I do the crazy stuff, then spreads work in the background as swing trades"

Example Spread Result

- "\$35 can turn into \$1,000 if ASML drops"
- "Microsoft call spread makes 100% if Microsoft is the same price or higher in a month and a half" — stock doesn't need to move much at all

Victory Trades Service

- Trade live with Brandon and Greg every day (futures trading)
- Greg's trade alerts sent directly to phone, Discord, and email
- Includes free options courses (previously sold for thousands of dollars)
- Futures evaluation via **Apex Trader Funding**: \$20 for eval, ~\$60 to activate funded account

Market Update & Stock Picks [42:29](#)

- **S&P 500**: Sideways for ~2 months; both bulls and bears have been wrong
- **NASDAQ (QQQ)** slightly weaker — leading indicator to watch:
 - Below QQQ 700 = bearish
 - Above QQQ 700 = neutral
 - Only truly bullish above **QQQ 740**
 - Descending triangle forming; support break could get ugly quickly
- **SMH** (semiconductor ETF) starting to break down — could drag market lower
- **Bitcoin/BTC**: Chopping sideways; Greg will short aggressively (buy puts on IBIT) if it breaks below \$60K
- **Microsoft (MSFT)**:
 - Held up well, up 1.38% on a day NASDAQ was down nearly 2%
 - Greg's price targets: **\$430 end of August, \$480 end of year, \$580–600 end of next year**
 - Short-term bullish above \$400
 - Greg called a spread trade at lows — Victory Trades members doubled money in 30–40 minutes

- **Apple (AAPL)**: Up 6% since bull flag breakout Brandon noted; Brandon says he wouldn't buy up here, wants to short it
- **Google (GOOGL)**:
 - Dropped ~6–7% on news of delayed Gemini 3.5 model release
 - Earnings July 22nd — price action before earnings may not matter much
 - Greg's long-term target: **\$480, possibly \$580 in 2–3 years**; healthy balance sheet
 - Brandon and Greg both lean bullish on Google long-term
- **Amazon (AMZN)**: Popped 2.5% on breakout above \$250 but now reversing — "pattern failures" everywhere
- **NBIS**: Greg accumulating; exited half position in \$260–\$280s; sold bullish credit spreads at \$160 strike expiring end of August — makes 100% if stock stays above \$160 (\$250 to make \$250)
- **Copper**: Holding, not doing much, Greg still likes it
- **XLV** (healthcare ETF): Becoming more constructive; Greg likes call options above \$165, end-of-year or next-year expiry; shares also work for dividend
- **Medtronic (MDT)**:
 - Minnesota healthcare company
 - **3.6% dividend yield, paid monthly — 72 cents per share**
 - Fair value: **\$113/share** — current price ~35% below fair value
 - Greg recently bought; recommends as portfolio addition
- Market thesis: likely due for a real correction after market went up **35% with no pullbacks**; a 10% QQQ drop would be healthy and Greg considers it a dip-buy

Habit 1: Be an Extremist 1:08:01

- Recap of Connor Murphy story to anchor the habit
- Average American stats that define what "average effort" produces:
 - **66% of American adults are obese**
 - **42% of Americans have less than \$1,000 in their bank account**
 - "Average is not good. Average is broken and fat."
- Extreme results can ONLY come from extreme actions — "there is no version of reality where it can happen different"
- The bug analogy again: don't swat, fumigate
- Common mediocre phrases to reject:
 - "Everything in moderation"
 - "Slow and steady wins the race"
 - "Have some fun, live a little"
 - "The average person can't do this" — Brandon: "I know. The average person is a loser."
- The framework (repeated with emphasis):

- Pick ONE goal in each: health/fitness, wealth, relationships
- Plan for impossibility of failure, not minimum effort required
- Execute consistently
- Qualifier: this doesn't apply if you've made peace with not wanting something — hate becomes the poison when you're unwilling to do what's required but still resent those who did

Habit 2: Track Everything 1:20:02

- Without tracking, you can lie to yourself; with tracking, you can't
- Brandon's tracking history: **tracking calories and macros for nearly 20 years**
 - Can tell you calories eaten, protein consumed, calories burned, water intake, social media posts, money made, and even whether he had sex on any specific date in the last 10+ years
- Common failure pattern: people say "I eat healthy" or "I'm posting a lot" but have no actual numbers
 - Brandon checked one student's Instagram claiming to "post a lot" — he had posted **twice one week and three times the week before**
- The analogy: Amazon not tracking inventory, a teacher giving grades without grading papers — "you ain't fired, you'd be fired"
- Life is just math:
 - Lose fat → burn more calories than you consume
 - Retain muscle → **1 gram of protein per pound of bodyweight per day**
 - Successful business → sell for more than it costs to deliver
- What Brandon tracks daily (shown in his actual log):
 - Wake time and sleep duration
 - Workout completion
 - Meditation (twice daily standard)
 - All macros (protein grams, calories, fats, carbs)
 - Water intake
 - Money made
 - Business metrics (leads, etc.)
 - Social media posting
 - Quality-of-life self-grade
 - Health self-grade
 - Relationship quality self-grade
- Tools Brandon uses:
 - **Victory Vision Planner** — free Notion template (link in description)
 - Connected to **Claude Code** to generate graphs and visual dashboards
 - **Google Gemini** — connected to Google Calendar; use it to schedule deep work blocks conversationally

- How to use the Victory Vision Planner:
 - Page 1: daily habit tracking dashboard
 - Page 2: goal planning (map out goals and the daily actions required)
 - Focus only on today's actions — don't stare at the far-off goal and get discouraged
 - Data lets you see incremental progress, which builds enthusiasm

Habit 3: Learn to Enjoy the Sacrifice 1:25:42

- Core truth: "If you don't sacrifice for your goals, your goals become the sacrifice"
- Every moment is a choice between:
 - Long-term goals vs. momentary pleasure
 - Life is always a trade-off; sacrifice is unavoidable either way
- Things that feel good short-term are typically bad long-term: sugar, alcohol, recreational drugs, casual sex
- Things that aren't fun short-term are typically good long-term: working out, dieting, locking in instead of going to functions
- The cheat code: **reframing**
 - Create mental reframes that let you enjoy the sacrifice
 - Example 1: Brandon says "Sugar is for women and children" — hyperbole, but repeated so often it became a genuine identity anchor; avoiding sugar now *feels good*
 - Example 2: "If I wake up past 6, I kind of hate myself" — programs early sleep/wake habits through self-hypnosis
 - These repeated phrases become default mental responses even when not said aloud
- The dinner table story:
 - Someone told Brandon: "I could never be that disciplined [with the food scale]"
 - Brandon said nicely: "Yeah, man, you gotta find what works for you"
 - Brandon thought: *"You goddamn right you can't do what I do. I'm way better than you at many things. You can never be me."*
 - That internal pride in the sacrifice makes the sacrifice enjoyable
- The key reframe question: **"What sacrifice would the winner make?"**
 - Visualize the future version of yourself who accomplished all goals in 5 years
 - Ask: what decision did that person make right now?
 - When you choose correctly, you feel pride; repeated over time, you **enjoy** making the right sacrifice
- Side effect: genuine confidence — not bravado, but real self-trust earned by doing hard things when no one's watching
 - "A lot of you guys aren't confident because you haven't given yourself a reason to be confident"

Habit 4: Pick the Right Woman 1:44:04

- "No matter how strong you are, your weakest point is always going to be your heart"
- Reference to the movie *Belly* (Nas & DMX): DMX's line — "Women will fuck your whole shit up"
- Brandon's personal example: his girlfriend is a major reason for his increased success in recent years — supportive, removes stress rather than adding it
- Observation: when sales team numbers slip, 80% of the time a relationship problem is at the root
- The Drake analogy:
 - A girl canceled on Brandon to go somewhere with her mom (non-emergency — like Lowe's)
 - Would she have canceled on Drake? No — she would have sent her mom Instacart money and gone on the date
 - **"You need to become the kind of man that will make your ideal woman flake on her mama for you"**
- You can't pick the right girl if you're not the right guy — she won't be available to you
- The three pillars of attraction men discuss: **looks, money, and status**
 - Optimizing for only one narrows what you attract:
 - Money only → attracts gold diggers
 - Looks only → attracts women who only want that (short shelf life)
 - Even if you get your ideal girl while missing pillars, she won't behave with you the way she would with her true ideal man
- The solution: become a well-rounded man across all three pillars
 - Once you are that man, you stop chasing and start choosing
 - "How do I pick the right one from the women trying to get me?" — that's the dynamic you want
- Her ideal man is probably: financially successful, in great shape (not good — great), good personality, well-rounded
 - Missing any of those creates ongoing conflict in the relationship

🎯 Habit 5: Raise Your Standards [1:56:19](#)

- Core distinction: **goals vs. standards**
 - Goals = things you want
 - Standards = things you refuse to accept less than
- "We don't rise to our ambitions. **We fall to our standards.**"
- "You don't get what you want. You get what you have to have."
- Look at every goal you've ever failed to accomplish — it was something you *kind of* wanted, not something you *had to have*
- Language shift examples:

Old (Goal Language)	New (Standard Language)
"I want to try to get to 10% body fat"	"I refuse to accept anything less than 10% body fat"

Old (Goal Language)	New (Standard Language)
"I'm trying to get to 10K a month"	"I refuse to make less than 10K a month"
"I'm working on hitting my macros"	"That doesn't happen" (Connor Murphy)

- Standards = things you do no matter what, like brushing your teeth — not "I'm trying to" but just what you do
- Brandon's personal standards:
 - **Minimum 1 gallon of water per day**
 - **Minimum 1 gram of protein per pound of bodyweight per day**
 - Post on social media every day
 - Sleep 7 hours per day
 - You only drop standards for actual emergencies — not for feelings, not for "deserving a day off"
- Why you struggle with consistency: you **accept inconsistency**
 - Phrases that signal accepted inconsistency: "I did it most days," "one day won't hurt," "everything in moderation"
 - "Those are the affirmations of the mediocre"
- Your life — your money, your partner, your physique — is a **public display of your standards**
- The payoff of 90 days at extreme standards:
 - You'll love how you look and feel
 - People will admire and ask you for advice
 - Family will get inspired
 - You'll **like yourself more** — because deep down you know you're capable of more and you'll finally be proving it to yourself
 - "On the other side of 90 days is a life better than you can imagine. Whatever you think it is, it's better."

? Audience Q&A [1:58:43](#)

- **Options vs. forex for low capital?** (Greg)
 - Greg prefers options over forex; if wanting a forex trade, trade an option on a forex-linked ETF or dollar-based instrument
 - For truly low capital, **futures via Apex Trader Funding** is strong: \$20 eval fee, ~\$60 activation, then just preserve the funded account and extract payouts
 - Key: avoid pressure of small accounts by boosting income through job/business/side hustle + auto-depositing (e.g., \$100/week) into trading account
- **Google technical analysis?** (Greg)
 - Google dropped ~6.5–7% on Gemini 3.5 delay news
 - Earnings July 22nd — most of current price action is noise until then
 - Long-term target: **\$480 minimum, possibly \$580 in 2–3 years**; healthy balance sheet
 - Brandon and Greg both lean bullish; possible dip-buy

- **How to execute a 4-hour focus block?** (Brandon)
 - Map your full calendar in Google Calendar (sleep, work, recurring commitments)
 - Identify white space
 - Use **Google Gemini** (free, connected to Google Calendar by default): ask it conversationally to find open blocks and schedule 4 hours of deep work per day
- **How did you build the habit of tracking?** (Brandon)
 - Practice — it's a skill that improves over time
 - Observation from business school: real companies track everything
 - First started tracking macros: noticed 100% of people who track macros are in amazing shape; 100% of people who don't track are not
 - "Success leaves clues" — extended to all areas of life
- **Best full-body workout in one hour?** (Brandon)
 - 1–2 exercises per body part, 3–4 sets each
 - **Superset opposing muscle groups:** biceps + triceps, back + chest
 - Time rest periods — Brandon uses Apple Watch voice command: "Set 90-second timer"; never rests more than 2 minutes
 - Put phone in bag — phone is the #1 thing that slows down workouts
 - If gym is crowded and supersetting is hard: go at non-peak times (Brandon works out in his condo gym, which is now private since a nicer gym opened across the street)
- **How to find like-minded driven people?** (Brandon)
 - Think of your circle like the solar system — become the sun
 - Once you become the person, you create a gravitational pull; driven people will find you
 - You don't need anyone else to get started — get momentum on your own first, then others will be drawn in
- **Shoutout — Hanzo Griffin:** Passed **three prop trading eval accounts in one single day** trading NQ longs; trades live with Greg daily on Victory Trades
- **Shoutout — Chris:** Made **\$3,000 in one day** off trade alerts in Discord; Jacob made \$55
