

Leverage doesn't add. It multiplies.

Channel: Tim Luong · Published: Jun 17, 2026 · Watch: <https://www.youtube.com/shorts/nEV-4kw-M3g> Source: description only

Executive Summary

A YouTube Short making the concise case that leverage multiplies your inputs rather than simply adding to them, suggesting its impact on results is exponential in nature.

Detailed Breakdown

- **Core claim** (title only — no transcript or description available)
- Leverage is framed as multiplicative, not additive
- Additive thinking: $\text{effort} + \text{leverage} = \text{slightly more output}$
- Multiplicative thinking: $\text{effort} \times \text{leverage} = \text{exponentially scaled output}$
- No further detail, examples, or steps can be confirmed from the available source
