

Nutrition Myths. TRUE or FALSE 🤔

Channel: Brandon Carter · Published: Jul 04, 2026 · Watch: <https://www.youtube.com/shorts/2mGapq272mU> Source: full transcript

Executive Summary

Brandon Carter busts four common nutrition myths in under 30 seconds: protein is essential, carbs aren't inherently fattening, egg yolks are safe to eat, and supplements are helpful but never necessary — diet and tracking come first.

Contents

- 🍌 Myth 1: Protein Helps You Build and Keep Muscle
- 🍞 Myth 2: Carbs Make You Fat
- 🥚 Myth 3: Egg Yolks Are Bad for You
- 💊 Myth 4: You Need Supplements to Build Muscle

🍌 Myth 1: Protein Helps You Build and Keep Muscle 0:00

- **Verdict: TRUE**
 - "Without adequate protein you can't build muscle" — stated with full confidence, no caveats.

🍞 Myth 2: Carbs Make You Fat 0:05

- **Verdict: FALSE**
 - Carbohydrates themselves do not cause fat gain.
 - Brandon personally follows a keto diet, but explicitly says it is NOT for body composition reasons.
 - His stated reason for keto: immune system support.
 - Personal anecdote: "I ain't had a cold in 9 years" as evidence of that benefit.

🥚 Myth 3: Egg Yolks Are Bad for You 0:14s

- **Verdict: FALSE**
 - Eats **6–8 whole eggs every day**, yolk included.
 - Self-reported health markers: perfect cholesterol, perfect blood work.
 - Dismissive of the myth: "Stop playing with your food. Eat the yolk."

💊 Myth 4: You Need Supplements to Build Muscle 0:22

- **Verdict: FALSE**

- "Supplements are designed to supplement your diet" — they are an add-on, not a foundation.
- Diet is described as "the most important part" and "the most important thing."
- Supplements can be beneficial, but are never required.
- Key takeaway: if you aren't tracking calories and macros, nothing else matters.
 - Direct quote: "If you're not tracking your calories and your macros, you're really not trying, bro."
