

10 out of 10 FAT LOSS Tips For Men Over 30

Channel: Brandon Carter · Published: Aug 10, 2026 · Watch: <https://www.youtube.com/shorts/T2YsKaS0EsM> Source: full transcript

Executive Summary

Brandon Carter delivers blunt, practical fat loss advice for men over 30: hit 20,000 steps daily, track calories rigorously, eat 1 g protein per pound of bodyweight, and train the full body four times a week.

Contents

-  Tip 1: Walk 20,000 Steps Per Day
-  Tip 2: Track Your Calories
-  Tip 3: Eat 1 Gram of Protein Per Pound of Bodyweight
-  Tip 4: Do Full Body Workouts Four Times a Week
-  Free Resource: RIP Road Map

Tip 1: Walk 20,000 Steps Per Day 0:00

- Walking 20,000 steps burns an **extra 800–1,000 calories** per day for the average person
- Exact daily schedule to hit the target:
 - Morning: 30-minute walk → ~3,000 steps
 - After lunch: 30-minute walk → ~3,000 steps
 - After work: 60-minute walk → ~6,000 steps
 - During the 8-hour workday: set an alarm and walk 10 minutes every hour → accounts for the remaining steps to reach 20,000
- The "cheat code" is the in-workday alarm system — it spreads movement throughout the day without requiring extra free time

Tip 2: Track Your Calories 0:22

- Men over 30 cannot rely on intuitive eating the way young influencers promote
 - Metabolism slows with age, so the margin for error shrinks significantly
- Calorie tracking is framed as simple: "It's just putting numbers in the phone"
- Dismisses excuses as unnecessary softness — directness is a deliberate motivational choice

Tip 3: Eat 1 Gram of Protein Per Pound of Bodyweight 0:22

- As men age, the body becomes less efficient at utilizing dietary protein

- This means a higher intake is required just to *maintain* existing muscle mass
- Without sufficient protein, natural aging causes progressive muscle loss year over year
- Target: **1 g of protein per pound of bodyweight** daily

Tip 4: Do Full Body Workouts Four Times a Week 0:46

- Frequency: 4 full-body sessions per week
- Exercise selection: 1–2 exercises per body part
- Volume: 2–3 sets per exercise
- Rest periods: **90 seconds** between each set
- Full-body training ensures every muscle group is hit multiple times per week, supporting muscle retention during a fat loss phase

Free Resource: RIP Road Map 0:46

- Tool name: **RIP Road Map**
- Purpose: analyzes your body fat percentage and tells you exactly how much fat you need to lose
- Offered for free by Brandon Carter
