

🔥 WALK 20,000 STEPS A DAY TO GET RIPPED 🔥

Channel: Brandon Carter · Published: Sep 06, 2026 · Watch: <https://www.youtube.com/shorts/lzq1Q0kjt0> Source: full transcript

📋 Executive Summary

A 27-year veteran personal trainer claims walking 20,000 steps daily gets people into the best shape of their lives, and lays out a four-block daily schedule to reach that target while burning 800–1,000 extra calories.

🏆 Trainer Credibility & Core Claim 0:00

- Brandon Carter has been a personal trainer for **27 years** and has trained thousands of people
 - He states that every client who followed the 20,000-steps-per-day protocol reached the best shape of their life
- Core claim: walking 20,000 steps every day will make you "daringly fit" (ripped)

📅 The 4-Block Daily Walking Schedule 0:00

- The routine is broken into structured blocks throughout the day to make the goal manageable

Block	Timing	Duration	Steps Earned
Morning walk	Right after waking up	30 minutes	~3,000 steps
Lunch walk	After eating lunch	30 minutes	~3,000 steps
After-work walk	End of the workday	60 minutes	~6,000 steps
Hourly work breaks	Every hour during work	10 min/hour	~8,000 steps
Daily Total			~20,000 steps

🔑 The Secret Weapon: Hourly Work Breaks 0:21

- The biggest step contributor — and the key differentiator — is walking **10 minutes every hour** throughout the workday
 - Strategy: set an alarm to trigger every hour as a reminder to get up and walk
 - This block alone accounts for **8,000 of the 20,000 steps**, making it the single most impactful habit
- Framed as the "real secret trick" because most people overlook movement during sedentary work hours

Calorie Burn & Diet Reminder 0:21

- Completing all 20,000 steps burns an additional **800–1,000 calories per day**
- Diet is explicitly flagged as equally important — steps alone are not enough
 - Calories and macronutrients must also be dialed in to reach body-composition goals

Free AI Nutrition Roadmap Tool 0:42

- Brandon offers a free AI tool to anyone who comments the word **"roadmap"** on the video
 - Inputs: height, weight, age, and a photo upload
 - Outputs:
 - Estimated body fat amount
 - Body fat percentage
 - Projected timeline to reach your goal
 - Personalized daily calorie and macronutrient targets
- Designed to complement the walking protocol with individualized nutrition guidance
