

20,000 Steps a Day Will Get You Super Ripped

Channel: Brandon Carter · Published: Sep 06, 2026 · Watch: https://www.youtube.com/shorts/NZDTjcT_prE Source: full transcript

Executive Summary

Brandon Carter claims that walking 20,000 steps a day — structured across morning, afternoon, evening, and hourly work breaks — puts people in the best shape of their lives and burns significant fat within a month.

Contents

-  The Core Claim
-  The Daily Step Schedule
-  The Trick: Hourly Work Alarms

The Core Claim [0:00](#)

- Walking **20,000 steps per day** is enough to get "super ripped"
 - Carter states he has trained thousands of people over **27 years**
 - Everyone who followed this approach reached the best shape of their life
- Expected result: significant fat loss **within one month**

The Daily Step Schedule [0:00](#)

- The schedule is designed to fit into a normal daily routine without major disruption

Walk	Duration	Approximate Steps
Morning (right when you wake up)	30 minutes	~3,000 steps
After lunch	30 minutes	~3,000 steps
After work (with family/friends)	60 minutes	~6,000 steps
Hourly work breaks (8 hrs × ~1,000 steps)	10 min/hour	~8,000 steps
Total		~20,000 steps

- The after-work walk is explicitly social — can be done with family or friends, making it sustainable

The Trick: Hourly Work Alarms [0:24](#)

- Set an alarm **every hour** during your workday (assumes an 8-hour workday)

- Each alarm = get up and walk for **10 minutes**
- Ways to accumulate these steps at the office:
 - Walk around the office
 - Go to the water cooler
 - Take a few extra laps to the bathroom
- Over 8 working hours this adds roughly **8,000 steps** — the key to reaching the 20,000 target

The hourly alarm strategy is the core "trick" — it converts sedentary desk time into thousands of additional daily steps without requiring any dedicated workout time.
