

Meta Muse is Best AI Agent Yet (Here's How I'm Making Money With It)

Channel: Brandon Carter · Published: Sep 28, 2026 · Watch: <https://www.youtube.com/watch?v=RclwN5RG6ik> Source: full transcript

Executive Summary

Meta Muse is a free, native-Instagram-integrated AI agent that Brandon uses to audit his own Instagram, analyze competitors, follow up on leads via DMs, cancel wasted subscriptions, auto-trade Poly Market, and generate a personalized morning brief — all without a paid plan for most users.

What Is Meta Muse & First Setup 0:00

- Meta released Muse as what Brandon calls "the easiest to use AI agent ever"
- Most creators are using it for basic tasks (email, appointments); Brandon focuses on money-making use cases
- On first launch you're greeted by a default "friendly monster" avatar (Monsters Inc.-style)
 - Brandon replaced his with an "Africanamean hip-hop robot" and named it **Tyrone**
- Muse is **free** — comes with a large allotment of free credits
 - Brandon's paid tier: **\$60/month** for heavy usage with recurring scheduled tasks

- His view: "I genuinely believe the average person will have a difficult time running out of their free Meta Muse credit"
- Compared to Grok ("Grankbot"): running too many queries burns Grok credits fast; Muse is far more generous
- Not sponsored — Brandon explicitly notes Meta has not paid him and he'd happily accept a sponsorship

Growing Your Instagram with Muse 1:19

- Muse is the **only AI agent with native Instagram integration** because Meta (parent company of Instagram) built it
 - No APIs, no third-party connectors required — plugs in directly
- Why Instagram growth = money:
 - Even non-social businesses (roofers, plumbers) need a strong presence
 - When running paid ads, many people don't click and buy — they check your Instagram first to verify legitimacy
 - Some followers need organic content to "warm up" before purchasing
- **Step 1 — Run an Instagram Audit:**
 - Prompt example: "Analyze my Instagram, tell me what's working, what's not, and give me suggestions"
 - Muse digs into actual account data and returns insights like:
 - Reach improving: **22% more likes** over last 30 days vs. 90 days
 - **19% more engagement** in the same window
 - Top performing content types: listicle carousels, podcast clips featuring recognizable names
- **Step 2 — Generate a Full Audit Artifact:**
 - Muse produces an interactive "artifact" (a formatted document/report) containing:
 - Follower count, accounts reached, total views, total interactions (last 30 days)
 - Ranked list of highest-converting content
 - Ranked list of highest-converting CTAs
 - Content broken down by bucket with average comments
 - Top posts highlighted
 - What to double down on vs. what to do less of
- **Step 3 — Analyze Competitors' Instagrams:**
 - You can analyze ANY public Instagram account, not just your own
 - No login to the other account needed — pulls public data through Meta's integration

Competitor Analysis: Deep-Diving Greg (Knobody's) Strategy 3:51

- Brandon analyzed fitness influencer Greg (Knobody) with his permission; showed Greg the document before publishing

- Key data points Muse surfaced about Greg's account:
 - Greg has **twice as many followers** as Brandon
 - Greg posts **far less frequently** than Brandon
 - Posts **mostly Reels**, just a few carousels
 - Gets **more comments per post** on average (higher consistency)
 - Brandon gets higher engagement spikes but less consistency
- Greg's core Instagram strategy as identified by Muse:
 - Focuses on **one sharp belief** expressed repeatedly in different ways
 - Niche: getting lean without living like a monk
 - Nearly every post reinforces this single thesis
- **Greg's Content Pattern (as broken down by Muse):**
 - Step 1 — Lead with a **forbidden-looking visual**: donuts, cookies, indulgent meals — functions as a pattern interrupt
 - Step 2 — State a **controversial claim**: reframe a familiar "bad" behavior as compatible with getting lean
 - Step 3 — **Explain the mechanism**: why it actually works scientifically
 - Step 4 — **Show the payoff**: display his physique as proof
 - Step 5 — Repeat with fresh visuals/scenarios
- Example reel Brandon highlighted (400 comments):
 - Greg claims leptin levels crashing slow fat loss
 - His fix: eat **Krispy Kreme donuts** a couple hours before bed to boost leptin
 - Brandon's take: "He's being controversial... you won't hear a lot of trainers saying eat two Krispy Kreme donuts before bed"
- Why this strategy works:
 - Creates instant curiosity via visual contradiction (jacked physique + junk food)
 - Stands out because almost no other trainer advocates this approach
 - Courts controversy which drives comments and shares
- Brandon's broader lesson: Greg exemplifies the advice Brandon gives his own community — **"find a niche and focus on it"**
 - Brandon has trained/coached **over 15,000 people** in online fitness businesses
 - Made his **first million as an online trainer**

Head-to-Head Instagram Comparison & Content Lessons 9:05

- Brandon asked Muse: "Break down what I'm doing vs. what Greg's doing and what I can do to improve based on those results"
- **Muse's Head-to-Head Summary:**

Metric	Greg (Knobody)	Brandon Carter
Followers	~2× Brandon's	Baseline
Posts per period	Far fewer	Posts way more
Avg. comments/post	Higher & more consistent	Higher spikes, less consistent
Content style	Contrarian claim → reason → proof → light offer	Timely hook/tutorial/list → value stack → keyword CTA
Topic focus	One topic (lean without suffering)	Mix: tutorials, lists, sales math

- Muse's key insight: Greg's "instant visual contradiction" (donuts + lean physique) creates tension that drives engagement
- What Brandon could "steal" from Greg:
 - Tighter topic focus
 - More consistent contrarian framing
 - Visual contradiction as hook
- Muse generated a **10-day hybrid content test plan** blending both strategies
- Brandon also had Muse analyze a specific outperforming reel of his own, then write additional scripts in that style
 - Tip: Don't read AI scripts word-for-word — use them as **outlines or bullet points** to riff on naturally
 - Follow-up videos based on those scripts also performed well

Monetizing the Instagram Features (Selling Audits & Content Services) 12:10

- Beyond growing your own business, you can **sell these services to other businesses**
- **Service idea 1 — Instagram Audit Package (~\$500):**
 - Analyze their Instagram
 - Analyze them vs. several competitors
 - Deliver competitor insights
 - Target clients: entrepreneurs who aren't AI-savvy
- **Service idea 2 — Content Idea & Script Service (charge more):**
 - Use Muse to find best-performing content in their industry
 - Generate hooks, content ideas, and bullet-point outlines
 - Entrepreneurs pay for this because most aren't good at content creation
- Brandon's own experience paying for this:
 - Paid his team (e.g., Ryan McGinn) to show up in Miami and film ~100 videos
 - Team would bring a list of ideas, hooks, and bullet points; Brandon would riff
 - "It was still my information, but they came up with the concepts"

- Opportunity: **Start a short-form content agency** using Muse
 - Analyze top creators in a client's industry
 - Surface best-performing content
 - Deliver hooks, ideas, and outlines to the entrepreneur
 - "I'm telling you, people pay for it. I've paid for it."

DM Triage: Finding & Re-engaging Leads Automatically 15:11

- Because Muse is natively integrated with Instagram, it can access your Instagram DMs directly
- **Problem it solves:** Instagram DMs are a long unorganized string of messages — hard to track sales conversations
- **What Muse can do:**
 - Sort DMs to identify potential clients/leads
 - Draft responses for you to approve (does NOT auto-send without approval)
 - Manage follow-ups
- **Live demo Brandon ran:**
 - Prompt: "Go to my Instagram DMs and find potential leads for a high-ticket trainer"
 - Muse responded: "I dug into your DMs. Your team is already running a qualification funnel. Several are already in motion."
 - Then found leads that had **slipped through the cracks**
 - Drafted re-engagement messages for Brandon (and his DM helper Anna) to review
 - Brandon approved and sent them one by one in real time
- **Scheduled automation:**
 - Brandon set up a recurring task: "Every night, go through my Instagram DMs and find potential leads that may have slipped through the cracks"
 - Initially set to 11 PM, changed to **5:00 AM daily** so it runs before he wakes up
 - Muse confirmed the scheduled task immediately
- Key safety point: because this is Meta's own tool operating within Meta's ecosystem, there's no risk of account bans from automation
- Uses Whisper Flow for voice input — assigned a mouse shortcut button to transcribe speech directly into Muse

Side Chats, Scheduled Tasks & Workflow Organization 10:54

- Muse has one **main chat** plus unlimited **side chats** for specific ongoing tasks
- Brandon's current side chats include:
 - Poly Market trading
 - Instagram lead finding
 - YouTube script/idea generation

- Daily news update brief
- Subscription cancellation
- More YouTube ideas
- Productivity/goal tracking
- Captions and scripted content
- 90-day money plan
- Compared to Grok's different bot personalities — Muse side chats don't have distinct personalities but serve the same organizational purpose
- Recommendation: do most work in main chat; break out to side chats only for dedicated recurring workflows

Canceling Subscriptions to Pay for Itself 18:33

- Brandon's strategy: make Muse's \$60/month plan **pay for itself** by having it cancel unused subscriptions
- Process:
 - Connected email to Muse
 - Asked it to do a deep dive on all recurring charges
 - Muse identified subscriptions and started canceling them
- What Muse found:
 - Brandon was spending **\$1,200/month** on subscriptions
 - Had **two YouTube Premium** subscriptions
 - Had **three MyFitnessPal** subscriptions
 - Many had already been caught by Grok earlier (Grok saved him **~\$1,000/month** before Muse launched)
- Muse has its own built-in web browser
 - Can log into services using Google login or Apple account credentials already stored
 - Can navigate to cancellation pages directly
- Limitation encountered: the cancellation automation worked better on desktop app than web app; some required manual steps
- Prompt example: "Find at least \$60 worth of monthly subscriptions I can cancel right now"
- Net result: Muse has already saved him money by canceling subscriptions, effectively covering its monthly cost

Gambling on Poly Market with Muse 20:24

- Brandon connected Muse to his **Poly Market** prediction market account for automated trading
- Setup was difficult and took a long time — used long, detailed prompts
 - Initially tried prompts written with help from **Claude Fable 5**, then switched to **Claude Opus 5** when it still wasn't working
- Division of labor:

- **Grok (Grankbot):** handles non-sports Poly Market trades
- **Muse (Tyrone):** handles sports-related trades
- Results so far:
 - Muse logged its **first two trades** on the day of filming
 - Account up **\$11 total**; those two trades up **\$0.41**
 - "We up 41 cents. That ain't bad. It ain't good, but it ain't bad."
- How it works technically:
 - Muse logs into Poly Market via its built-in browser
 - Runs a cron job on a schedule
 - Given permission in the prompt to trade autonomously (doesn't ask approval each time — required specific prompting to override default approval-seeking behavior)
- Current limitation: trading rules may be too strict — taking small position sizes and not trading frequently enough
- Future plans: "Once I make some money in this, get ready for the Muse Poly Market money printing course" — but promises to share it free on YouTube first

Daily 5 AM Intelligent Brief & Personal Podcast 22:35

- Brandon runs a **5:00 AM daily intelligent brief** as a scheduled task in a dedicated side chat
- **Brief structure (in order):**
 - Miami weather forecast
 - Tech news (everything important in tech)
 - Fitness + AI intersection news (his content niche)
 - Global headlines (politics, world events)
 - Stock market update (Brandon is a heavy stock market investor)
- Muse generates this as a **personal audio podcast** he can listen to while getting ready / in the shower
- Sample excerpt from the brief (Sunday, September 27, 2026, 5 AM):
 - Weather: sunny, 80°F, high of 86°F, low of 74°F, humidity mid-60s, light northerly breeze, slight afternoon thunderstorm chance, no advisories
 - Tech headline example: Anthropic cut the price of cache reads on **Claude Opus 5.5**
- Why he values it: "If some new news comes out, there's typically a way I can use it and monetize it"
- The brief runs ~5 minutes in audio form

Inbox Triage & Calendar Management 24:41

- Muse goes through his email inbox every morning and surfaces what's important
 - Focus: anything that could make money, any deadlines, anything urgent
 - Set up in a separate side chat, runs daily

- Brandon runs inbox triage across **multiple AI tools simultaneously** and compares results:
 - Muse (Meta)
 - Grok
 - Claude (has been doing this for months)
 - Suggestion: also try ChatGPT
 - Observation: "They all decide differently what they think is important. It's the strangest thing."
 - Recommendation: try all of them and see which surfaces the most valuable items for you
- Simple setup prompt: "Go through my inbox every day. Let me know what's ever important. Especially anything that can make me some money."
- **Calendar management:**
 - Brandon plans every hour of every day in Google Calendar — has done so since Google Calendar launched
 - iPhone **Action Button** reprogrammed to open Muse directly (previously was Google Gemini for over a year)
 - Voice commands via the action button: "Add this to my calendar," "Take this off my calendar," "Find availability for me"
 - Muse defaults to opening the main chat (not side chats) when triggered this way — Brandon prefers this
 - Recommendation: "If you have an iPhone, program your action button to open up to Muse"

Shopping & Errand Automation (The Birthday Party Story) 26:30

- Muse can shop and purchase items autonomously once payment info is stored
- **Story — Zoe's Birthday Party:**
 - Brandon asked Muse to reschedule his day's calendar, keeping only essentials
 - Muse flagged: "Heads up — Zoe's birthday party today"
 - Brandon had forgotten; Zoe is his friend's daughter (thought she was 2 years old, turned out she was 4)
 - Brandon told Muse the context; Muse suggested a **Lego Bluey set** as a gift
 - Muse asked: "Can I get it there before 2?"
 - Brandon approved — Muse ordered it immediately using stored card info
 - Package arrived at the house in time; Brandon showed up to the party "gifts in hand like nothing had gone wrong"
 - Quote: "The homie Tyrone not only reminded me about this, he went and saved the f***ing day"
- **Another purchase example:**
 - Saw an Instagram Reel claiming **air filters can increase cognitive function by 20%** (backed by a study)
 - Shared the Reel directly to Muse via Instagram's share button (Muse can actually hear/process Reels because of the Meta integration — not possible with other LLMs)
 - Asked Muse: "Is this legit or not?"
 - Muse pulled the actual study, gave a full breakdown, confirmed it was legitimate

- Brandon said: "Find me one of these and buy it" — Muse purchased an air filter on the spot
- Key capability: Muse has its own browser + stored payment credentials = end-to-end purchasing without leaving the app
- "It gets you almost there with most tasks" — Muse does the first pass, Brandon makes final approval decisions

Final Verdict & Other AI Mentions 29:09

- Brandon's verdict: **"This is the best AI agent yet. Grok is cool, but ain't nothing better than Muse so far."**
- Muse ranks as his **#2 favorite AI release of the year**
- **#1 favorite:** Google ChatGPT Astra 6
 - Uses Astra 6 to edit all his videos on TikTok, Instagram, and YouTube
 - This video itself was edited with ChatGPT Astra 6
 - Points viewers to a separate video on making money with Astra 6
- Other AI tools mentioned throughout the video:
 - **Grok / "Grankbot"** — used for inbox triage, non-sports Poly Market trading, subscription cancellation; saved ~\$1,000/month before Muse launched
 - **Claude (Anthropic)** — used for inbox triage for months; Fable 5 and Opus 5 versions used to write Poly Market trading prompts
 - **Whisper Flow** — voice-to-text transcription tool; assigned to a mouse button for hands-free Muse input
 - **Google Gemini** — previously had the iPhone Action Button slot for over a year before Muse replaced it
- Reminder: Muse is **free**; \$60/month paid tier available for power users with heavy recurring tasks
- Brandon's call-to-action: free live training on growing an online fitness business using AI — covers getting clients, training clients with AI, content growth
