

the only goal you will ever need...

Channel: Greg Lav · Published: Sep 28, 2026 · Watch: <https://www.youtube.com/watch?v=nJlv1sidfKE> Source: full transcript

Executive Summary

Greg Levki, CEO of Bloom Energy, tours a 1.4M sq ft manufacturing facility producing 900,000+ cans, showcases Bloom's explosive growth to #4 at Walmart, and delivers a motivational call to pursue a single "moonshot" goal in the next 100 days.

- 💡 Mindset: Delayed Gratification & the Life of Pursuit

What Is a Moonshot Goal? 0:00

- A moonshot is defined as "the only goal worth having" — a goal so large it changes the trajectory of your entire family tree if achieved
 - Greg's moonshot: building Bloom Sparkling Energy into one of the largest energy drink brands in the world
 - The argument: small goals, medium goals, and massive moonshot goals all require roughly the same sacrifice and self-investment — so you might as well go after the biggest one
- Life is framed as "the acquisition of memories"
 - The earlier you accumulate meaningful memories (e.g., seeing your moonshot physically realized), the more compound interest those experiences generate over a lifetime
 - Visiting manufacturers is listed among his favorite days in his entire career for this reason
- Bloom Energy drink launched July 2024 — two years prior to filming (Sept 22, 2026)
- Greg is 31 years old; has been in entrepreneurship for ~11 years

Inside the Manufacturing Facility 5:00

- The facility is **1.4 million square feet**

- Production rate: **1,500 cans per minute** being filled
- The visit covers ~900,000 cans visible on-site — described as "not even 12 hours of inventory"
 - Bloom's first ever order in 2019 was **2,500 units** costing ~\$20,000 — "everything we had" — and took weeks or months to sell
- Bloom operates across **9 plants in the United States** all running at this pace, plus **3–4–5 more facilities in the UK and EU** (11 total facilities mentioned)
- The facility uses **autonomous forklifts** with no tracks — they navigate via small white bars on walls and poles, moving cans freely from filler to variety packer
- Floors described as spotless — Greg jokes he'd eat a roast beef sandwich off them
 - Key point: quality assurance does NOT get traded away for scale; the facility represents "the center of excellence" and "the best manufacturing that technology has to offer in 2026"
- A large tank on the floor is filled with strawberry watermelon Bloom liquid being canned in real time
- The manufacturer also produces the top energy drinks and sodas in the world (unnamed, but implied — same facility as major competitors)
- Greg notes he has only visited manufacturers **5 or 6 times in his career total**, making each visit rare and impactful
- Emotional reaction: "I'm still a little short of breath... I'm short of words"
 - "Winning is the limitless energy pill. You come and visit this plant and it's like you have limitless energy for the next three months."

Bloom's Growth Milestones 2:21

- **#2 energy drink on Amazon** (largest marketplace in the US and world)
- **#1, #3, and #7 selling products** on TikTok Shop in the energy drink category
- **#4 energy drink at Walmart** as of filming date (Sept 22, 2026)
 - Just surpassed **Celsius** at Walmart in the last 4 weeks
 - Next target: #3 at Walmart
 - Two focus areas to double Walmart performance: consistently being in-stock and unlocking innovation
- **Over 500 million cans sold** in 2.5 years since launch
- Available in **50,000+ stores** across the United States
- YouTube channel launched "a couple months ago" and reached **100,000 subscribers**
- Described as "probably the fastest growing energy drink in the history of energy drinks"
- There were **300 products before the energy drink** — all considered stepping stones to the moonshot
 - "What you start with is not what you end with. You use stepping stones."
- Bloom pitched Alex Earl for a "Bloom X Unwell" collab; she took **\$20 million from Nestlé** instead for her own brand "Unwell" — described as "the worst name in the history of brand names" — that brand went bankrupt ~2 months before filming

The Asset-Light Business Model 8:39

- Bloom owns **zero** of the following:
 - Warehouses
 - Manufacturers
 - Trucks
 - Forklifts
 - Farmland
- Everything runs through **third-party partners**:
 - Distribution: **Dr. Pepper trucks**
 - Logistics: third-party warehouses
 - Production: third-party manufacturers
- Greg's argument for this model:
 - In 1999, you would have needed to own manufacturers, trucking, and potentially farmland — a brand like Bloom could never have grown this fast
 - In 2026, sophisticated third-party infrastructure allows a 31-year-old to build a juggernaut-scale company in 2.5 years
 - "The amount you are able to leverage your input in 2026 allows us to go after things that the prior generation just can't comprehend."

The reason Bloom is likely the fastest-growing energy drink ever is precisely because they own none of the infrastructure — full leverage of third-party partners enables speed that vertical integration would prevent.

Product Design & Brand Origin 16:53

- Bloom's founders are self-described "digital marketers" and "caffeine junkies since age 14"
 - Greg's entrepreneurial background goes back to high school: eBay, Facebook ads, dropshipping videos
- Product design is **reverse-engineered for digital content creation**:
 - The logo is placed **at the top of the can** — so when a content creator holds it while filming a TikTok, their hand never covers the logo
 - "Think about who you are as a founder and how do you leverage and capitalize the skill sets you already intrinsically have."
- Design timeline shown (photos referenced):
 - **January 6, 2024** — initial mockups (one described as "would have been a flop")
 - **February 2024** — getting closer to final design (4 months from launch)
 - **April 2024** — first test prints; kiwi flavor considered (later dropped)
 - **July 2024** — launch

- The team rented a boardroom in a Texas hotel for two days to work through all design options and pros/cons
- Leo Walter — Greg's best friend from high school — is President of Bloom day-to-day; Greg is CEO

The 100-Day Foundation Framework 11:44

- Filming date: **September 22, 2026** — approximately **99–100 days left in the year**
- Core thesis: resolutions don't start January 1st — they start NOW
 - "You could either build 2027 on a foundation of mud or on a foundation of concrete."
 - The "January 1st culture" is called out as a failure loop — people start goals Jan 1 and are worse off by Jan 15
- The framework is primarily about **saying NO**:
 - Say no to drama
 - Say no to bad friends
 - Say no to bad significant others
 - Say no to bad family members (temporarily, if needed)
 - Say no to hitting snooze
 - Say no to going to bed past **10:30 PM**
 - Quote cited: Benjamin Franklin — "Early to bed, early to rise makes a young man healthy and wise"
 - Greg films at **5:00 AM** — "That's when shit gets done"
- Recommended text response to anyone distracting you:
 - *"I'm busy turning into the man that can handle my goals."*
- Key mindset shift: **turn into the person capable of catching the moonshot before it arrives**
 - "What happens is the moonshot comes to you and you're not capable of even catching it."
 - "Stay ready so you don't need to get ready."
- Controlling your luck: once you build the foundation, the universe (opportunities) rewards you in 2027

Mindset: Delayed Gratification & the Life of Pursuit 14:07

- All founders — million-dollar, \$10M, \$100M, billion-dollar — carry the same amount of stress and make the same amount of sacrifice
 - Therefore: aim for the biggest possible goal
- Reframing delayed gratification:
 - Prior generation thought it meant investing 60 years of your life
 - Greg's version: invest **5, 10, maybe 15 years** (he is 11 years in)
 - "It's been just awesome for nine of the 11 years. And it's only getting better."
 - Result: a completely different life from age 35 onward — "the sickest last 40 years of your life"

- The biggest regret in society: people living on autopilot until their 40s, 50s, or 60s and realizing they never went after their shot
 - "Damn, I wish I went after that thing... I wish I broke autopilot 30 years ago."
- Persistence is the primary differentiator:
 - "Most of the people we were competing with five years ago just gave up. The only reason we're where we are today is because we just never gave up."
 - Bloom Energy was **opportunity #350** — not the first idea
- Legacy and family as motivation:
 - Greg and Leo's children will grow up seeing this
 - "Your kids can either see you go report into some lame ass desk job — or you can say, 'Before you were born, I said it was time to plot twist my life and I went after it.'"
- "Winning is the limitless energy pill" — seeing the factory eliminates burnout, reignites drive
 - "There's no finish line because how could I not want to keep doing this?"
- Call to action: subscribe, videos dropping at least once a week, targeting **5 videos per month** going forward
