

The finish line moves btw #businessgrowth #motivation #sucessjourney #mindset #success

Channel: Greg Lav · Published: Oct 05, 2026 · Watch: <https://www.youtube.com/shorts/O3VQXhpf70U> Source: full transcript

Executive Summary

Your biggest dream today will become your everyday routine within one to two years — and then the finish line moves again. After 10 years of living this, the speaker sees this as something to embrace, not resist.

Contents

-  The Finish Line Always Moves
-  You Can't Yet Imagine Your True Ceiling
-  Personal Examples: From Resistance Bands to Energy Drinks

The Finish Line Always Moves 0:00

- The dream you're chasing right now — what feels like your ultimate goal — can realistically become your ordinary routine within **one to two years**
 - You will be standing in the places you currently only dream about, possibly in just two years
 - But when you get there, the finish line shifts forward again

You Can't Yet Imagine Your True Ceiling 0:22

- After **10 years** of living this kind of life, the speaker has learned that the finish line never stops moving
- He reframes this as a powerful and exciting expectation to hold
 - The reason: you are not even capable of imagining your highest real goal right now
 - Your vision will expand as you grow — your future self will pursue things your current self cannot conceive of

"You're not even able to imagine your true highest goal right now."

Personal Examples: From Resistance Bands to Energy Drinks 0:22

- The speaker shares two examples of goals that once felt like his ultimate finish lines:
 - Selling **one million resistance bands**
 - Owning the **largest greens powder company in America**

- Neither of those goals included what he ended up doing — launching an **energy drink**
 - He never imagined he would create one
 - Now, **two years after launching it**, it is all he thinks about
- He closes with an open question: *"Who knows what I'll be thinking about in ten years."*
 - The takeaway: stay open, keep moving, and trust that your vision will grow beyond what you can currently see
