

live footage of our moonshot on the production line

Channel: Greg Lav · Published: Oct 05, 2026 · Watch: <https://www.youtube.com/shorts/i7Hawmq1clk> Source: full transcript

Executive Summary

Greg Lav shares live footage from a can-filling production line running at 1,500 cans per minute across nine US factories, reflecting on how the sheer physical scale of the operation defies comprehension until witnessed firsthand.

Contents

-  The Production Line Scale
-  The Emotional and Mental Reaction

The Production Line Scale 0:00

- The line fills **1,500 cans per minute**
 - The millions of cans viewers have seen were produced in just **two days**
- **Nine factories** across the United States are operating at this speed simultaneously
- Greg references a figure of **500 million cans per day** that he shows on a digital screen regularly
 - He notes that seeing a number on a screen does not make the scale real
 - Standing on the production floor is what finally makes it tangible
- He expresses genuine disbelief that the operation has grown to this size

The Emotional and Mental Reaction 0:23

- Greg describes his mental state while watching the line as meditative — his mind goes completely quiet
- He says he cannot process what he is seeing even while looking directly at it

"My mind is completely silent. I can't even absorb what I'm seeing. It's insane."

- The core takeaway: raw numbers on a screen are abstract; physical presence on the factory floor is what converts scale into genuine understanding
