

My Full Facial Workout - 1STMAN

Channel: 1M Vault · Published: Jun 22, 2026 · Watch: https://www.youtube.com/watch?v=_fjqwGa0a2Y Source: full transcript

Executive Summary

The creator walks through his complete daily facial exercise routine — roughly 20 minutes done in the shower each morning — targeting the neck, submental zone, chin, cheeks, lips, and jaw, arguing face training deserves the same acceptance as body training.

Contents

-  Introduction & Philosophy
-  Exercise 1: Old-Man Lip Push (Lower Neck)
-  Exercise 2: Bottom Teeth Jut (Neck Sides)
-  Exercise 3: Quick Jaw Jab
-  Exercise 4: Tongue Curl — Submental Zone
-  Exercise 5: Tongue Push Up — Chin Tip
-  Exercise 6: Corners of Mouth Downward Drive (Chin & Neck)
-  Exercise 7: Top Lip Isolation
-  Exercise 8: Face Push-Out for Cheekbones
-  Exercise 9: Side-to-Side Lip Slides (Buccinator Control)
-  Exercise 10: Nostril Breathing (Optional)
-  Exercise 11: Jaw Side-to-Sides
-  Exercise 12: Fist-Resistance Chin Press
-  Exercise 13: Bed/Sofa Neck Hang — The King Exercise
-  Closing Philosophy & Motivation

Introduction & Philosophy 0:31

- Creator positions the camera close-up so viewers can see facial movements clearly
- Acknowledges he will "look like a dickhead" — humorously pre-empts embarrassment
- Core philosophy: **the face and neck are muscles like any other and deserve to be trained**
 - "For 20 minutes a day in the shower in the morning... what's the problem, might as well do them"
 - Compares it to general body training: society accepts gym work but stigmatises facial exercises as "too vain"
- Routine order: starts at the neck, works upward toward the face

- General rep guideline: **~30 reps** as a baseline; bumped to **60–80** on easier, faster movements where more tension is needed
- Total time investment: approximately **20 minutes a day**, done in the morning (shower)
- Mentions related content: ebook (Male Advantage) and men's lifestyle supplement linked in bio

Exercise 1: Old-Man Lip Push (Lower Neck) [1:18](#)

- **Movement:** Tuck one lip below the other to create an "old man with no teeth" face, then move the jaw up and down / back and forth
- **Target:** Both sides at the bottom of the neck — creator can feel strong tension either side
- Works the lower neck region specifically
- Simple, rhythmic pumping movement; no equipment needed

Exercise 2: Bottom Teeth Jut (Neck Sides) [1:41](#)

- **Movement:** Push the bottom teeth/jaw outward and forward
- **Target:** Inner neck — described as "working inwards" compared to Exercise 1 which works the outer sides
- Together, Exercises 1 and 2 **cover the whole neck region** — one hits the outside edges, the other hits the centre/inner area
- Creator treats these two as a pair to ensure full neck coverage

Exercise 3: Quick Jaw Jab [2:03](#)

- **Movement:** Quickly jab / thrust the jaw forward in a sharp, repetitive motion
- Rationale: feels like it works many muscles simultaneously
- Creator notes he's done it since the start of his routine and may remove it in the future — included here as it's currently part of his practice
- No specific rep count mentioned; performed quickly

Exercise 4: Tongue Curl — Submental Zone [2:27](#)

- **Movement:** Curl the tongue upward out of the mouth, pushing it upward toward the roof/submental area
- **Target:** The **submental zone** — the area directly under the chin
 - Creator has dedicated previous videos to this zone specifically
 - Acknowledges mewing/orthotropics ("anybody who says orthotropics, yes, I know about that too — it's in other videos")
 - Stresses everything should be used in combination, but this video focuses purely on facial exercises
- Looks "proper weird" on camera but creator considers it very effective for that specific region

Exercise 5: Tongue Push Up — Chin Tip [3:13](#)

- **Movement:** Push the tongue straight up into the air (more centralised than Exercise 4)
- **Target:** Right under the tip of the chin — the very front/centre block of the submental zone
- A more focused variation of Exercise 4 for central chin definition

Exercise 6: Corners of Mouth Downward Drive (Chin & Neck) 3:37

- **Movement:** Drive the corners of the mouth sharply downward (like a forced frown)
- **Target:** Chin projection and neck muscles — a visible dip/movement can be seen in the neck when performing it
- Creator credits this exercise with noticeably improving his chin projection: "I feel like my chin's really come out since I've been doing this"
- **Reps:** Because this is a faster/easier movement, he bumps reps up to **60–80** rather than the standard 30
 - "You can gauge it — you'll know when you've got a weakness in your own face"

Exercise 7: Top Lip Isolation 4:00

- **Movement:** Force the top lip outward/forward without moving the bottom lip
- **Target:** Upper lip — isolating it to build more volume/definition
- Rationale: "Especially for white guys, most people have a bigger bottom lip than the top lip" — this exercise addresses that imbalance
- Looks unusual; creator explicitly says he "couldn't really care" about vanity stigma
- Part of the broader philosophy: training the face the same way you train the body

Exercise 8: Face Push-Out for Cheekbones 4:48

- Context: cheekbone improvement is primarily about tongue-on-roof-of-mouth posture (mewing), driving the maxilla forwards and upwards — but this is a supplementary exercise
- **Movement (Part A — Reps):** Push the whole face outward/upward in a puffed expression, done for reps
- **Movement (Part B — Hold):** Hold the whole face pushed out for a sustained squeeze
 - Creator prefers this "whole face" version over isolating just the buccinator (cheek) muscles, to avoid making cheeks look excessively puffy
- **Rep scheme:** Reps followed by a hold; exact numbers flexible

Exercise 9: Side-to-Side Lip Slides (Buccinator Control) 5:38

- **Movement:** Slide the lips from side to side
- **Key technique insight:** Over-exaggerating the movement (big, wide side-to-sides) heavily recruits the **buccinator muscles** (cheeks) and can make them appear puffier/bigger — creator discovered this and scaled back
 - Smaller, slower, more controlled movements still work the area but keep buccinator involvement lower
 - "I found that the buccinator muscles weren't moving as much" with the controlled version

- **Reps: 50–60** side-to-sides
- Combined with Exercise 8 (face push-out): ~**20 reps** of the push-out, then **hold for 10 seconds**, then repeat — though "just depends what I feel like really"

👉 Exercise 10: Nostril Breathing (Optional) [6:22](#)

- Creator mentions this exercise but **does not personally include it** in his routine
- **Movement:** Press a finger against one nostril, breathe out through it, then switch to the other
- Claimed benefits (cited from online community feedback):
 - Flares and tones the nostrils
 - Particularly useful for people with asymmetrical nostrils (one in, one out)
- Creator treats this as an optional add-on for those with specific nostril concerns

😬 Exercise 11: Jaw Side-to-Sides [6:44](#)

- **Movement:** Move the jaw side to side (described as looking like he's trying to eat the microphone)
- **Target:** The corners of the jaw / masseter area
- Brief mention; part of the standard daily sequence

👊 Exercise 12: Fist-Resistance Chin Press [7:12](#)

- **Movement:** Use a clenched fist as resistance against the underside of the chin/jaw, pressing upward while the jaw muscles push back downward
- **Target:** Chin, jaw muscles, and the entire submental zone
- The only exercise in the routine that uses external (self-generated) resistance — effectively isometric jaw training
- Creator describes it as creating "decent strain" compared to the unresisted movements
- Marks the end of the main seated/standing portion of the routine

🛏️ Exercise 13: Bed/Sofa Neck Hang — The King Exercise [7:32](#)

- **Movement:** Hang the head off the end of a bed or sofa, lower it all the way back/down, then bring it all the way back up under control, **tensing/holding at the top**
- **Equipment:** A sofa is preferred over a flat bed because the armrest provides leverage — "I think you need some leverage off the side of the armchair sort of thing"
- **Key technique:** Controlled movement throughout; the hold and squeeze at the top is the critical part

"To be honest, I feel like that's the king of all the exercises" — creator's single highest-rated move in the entire routine

- Could not demonstrate in the filming room but has shown it in previous videos

- Targets the full neck and submental zone under load/gravity

Closing Philosophy & Motivation 8:18

- Creator reflects on finishing both body training AND facial routine by **9:00 a.m.**, alongside a skin routine
 - "I don't know why more guys don't do this... I don't know why this isn't common knowledge"
- Core argument against the stigma:
 - Society accepts gym training to build muscle and improve looks
 - But facial exercises are treated as weird or vain — creator sees no logical difference
 - "Just makes your life easier"
- **Physiological reasoning offered:**
 - Modern lifestyle (hunching over screens/keyboards) causes the neck and submental muscles to go unused
 - This leads to loose, soft skin under the chin and a weak jawline
 - **"Muscles influence the shape of bones over a long period of time"** — consistent training reshapes the face gradually
 - Toning neck + submental muscles improves jawline definition: "we've all got this flabby skin under here... you start toning all of this up and working the facial muscles as well, everything starts coming together"
- References a previous video about a "five finger punch" concept (synergy of multiple habits)
- Encourages combining facial exercises with gym training for best results
- Plugs: **Male Advantage ebook** and **men's lifestyle supplement** — links in bio
