Introduction to Array & Competition Mindset 0:00

- Arie opens with a core mindset challenge: is competition actually a barrier, or just a fear?
 - His argument: large competitive markets signal massive demand, not a reason to avoid them
 - "It's just a lot of demand out there and just huge markets"
- The brand being analyzed is **Array** — a supplement Shopify store with a clean, premium aesthetic
- Arie's personal context:
 - He is both a brand owner and an agency owner
 - His own brand is currently at \$225K/month MRR
 - Goal: reach **\$500K/month MRR** by end of the year
 - Long-term ambition: scale to numbers comparable to Array over the next several years

Array's Growth & Business Model 0:46

- Array was founded in **2020** and has reached a **\$100M/year run rate**
 - That's roughly **\$8–10M/month** in revenue

- Key driver of compounding growth: **subscription model**
 - Customers subscribe to replenishable products (supplements), creating recurring revenue
 - Subscriptions make it easier to compound growth over time if the product quality is strong
- Array did NOT coast on a single winning product
 - They consistently launch new products addressing:
 - New health trends
 - Existing pain points addressed in a new way (new mechanism)
 - Emerging consumer pain points
- Their product quality appears strong — Arie cites it as the core reason they've "stood the test of time"

🎯 Ad Strategy: The Winning Formula 1:34

- Array's discovered winning ad message format: **"Goodbye [problem] → Hello [solution]"**
 - Examples from their live ads:
 - "Goodbye sleep deprivation. Hello mental clarity. Goodbye brain fog. Hello mental clarity."
 - "Goodbye creatine belly. Hello lean legs. Hello snatched waist. Sculpted body."
 - This format works because it clearly and simply identifies the problem and solution
 - Done in an aesthetically pleasing, clean visual style
- They are running **760 ads** simultaneously
 - Arie notes this is actually fewer than expected for a \$100M brand
- Traffic goes **directly to the product page** — no prelander or advertorial in these campaigns
 - Arie's take: their product pages are text-heavy enough to do the selling
 - His consulting recommendation would be to also test prelanders/advertorials to push harder on certain angles
- A standout video ad breakdown (creatine gummies):
 - Hook: "When I found a creatine gummy that actually tastes like candy... I messed up"
 - Reverse psychology structure: lists all the reasons NOT to be upset (i.e., the product benefits)
 - 5g of clinically tested creatine
 - Formulated with ginger to combat nausea and bloating
 - Contains a plant-based postbiotic to target inflammation
 - Punchline twist: "I messed up because I bought all three viral flavors individually — and now they sell an all-in-one variety"
 - Arie's assessment: "That's a really good ad. So simple."

🖋️ Product Differentiation: Unique Mechanism 5:21

- Creatine gummies are a crowded, competitive category — Array's approach to standing out:

- Add meaningful, functional ingredients that create a **unique mechanism**
 - Ginger → fights nausea (common creatine complaint)
 - Plant-based postbiotic → fights inflammation
- These additions become the story told in ads
- This principle is **not supplement-specific** — applies to any product in any category
 - Find an existing popular product, improve it with additional features/ingredients/components, and make that improvement the core of your marketing message
- Branding as a differentiator:
 - Array uses earthy tones, clean design, premium-but-approachable aesthetic
 - Products look good enough that customers want them displayed on their shelves
 - Customer comment captured via Smart Reply: "I don't know why, but your shop just has this warm vibe and your product really caught my eye."

Sometimes just new packaging and new branding is enough to stand out in a crowded market — Array is a proof point.

Ad Formats: Statics & Native Creatives 5:43

- **Static ads** are a major part of Array's creative mix
 - Easy and fast to produce
 - Highly effective when you understand your avatar's problem and the solution
 - Two types of statics Array runs:
 - **Branded statics**: clean, on-brand problem/solution format with product imagery
 - **Native statics**: look like organic Instagram posts, not ads at all
 - Example: a casual-looking photo with long-form copy like "Struggling with weight fluctuations and hormonal breakouts — this is the supplement I wish my doctor told me about"
- Distinction between two types of "native statics" in ecom:
 - Traditional ecom native static: a lifestyle/unrelated photo + long-form story copy that sells the product
 - Array's version: looks like a real person's casual Instagram post — different format, same native feel
- Partnership/influencer ads are also part of their mix
- Arie's comment on creative volume: statics are powerful because they can be pumped out quickly at scale

Geographic Expansion: Canada Opportunity 2:20

- Array's primary market is the **US**, but they are scaling meaningfully in **Canada**
- Arie's observation on Canada as a secondary market:
 - If a brand does \$100M in the US, Canada could potentially add ~**\$30M more**
 - Canada has **less competition**, which can make ads cheaper and margins better

- Profitability may actually be higher in Canada despite lower revenue volume
- Broader point: unique mechanisms and branding can reduce the impact of competition even in crowded markets, so competition alone shouldn't be a deterrent

Social Media & Organic Content Research 8:02

- Array posts regularly on social media but doesn't get extraordinary organic engagement — typical for most brands
- Exception: one post received **500 likes**, which Arie flags as a meaningful signal
 - 500 likes is not viral, but it's notably above their average — worth studying
 - Strategy: take that post, get inspiration from it, adapt it for your own brand's social media
 - Bonus: high-performing organic posts can also be **run as paid ads**
- Arie's personal method for finding winning ad angles via organic social:
 - Scroll Instagram pages of brands/creators in the niche
 - Look for **outlier posts**: content with disproportionately high engagement relative to follower count
 - Example threshold he watches for: a page with 10,000 followers that has a post with 50,000 likes — that's an anomaly worth investigating
 - He says he's found "several winning ads" for his own brands using this method

Research Buckets Framework 8:24

- Arie organizes his brand learning into **three research buckets**:
 - **Competitor research** — analyzing brands like Array to reverse-engineer what's working
 - **Overall market research** — broader trends, angles, mechanisms in the category
 - **Internal research** — learnings from their own brand's ads, products, and customers
- He does this type of brand teardown constantly, not just for YouTube — it's an active part of running his brand
- Philosophy: consistently learn from bigger brands that have already figured things out, then apply those learnings

Tools & Resources Mentioned 3:25

- **Smart Reply**
 - Automates comment responses on Meta ads at scale
 - Also works for email automation
 - Arie used it to pull a summary of comments on Array's ads to understand brand sentiment
- **Get Hooked**
 - Ad research/discovery tool
 - How Arie originally found Array's ads

- He describes it as a tool he uses "all the time"
- **ChatGPT**
 - Used for generating ad images and creative assets
 - Enables a lean team to produce high-quality creative output
- **Team Drop** (sourcing partner)
 - Acts as "boots on the ground in China" for brands not based there
 - Manages logistics between factory and global shipping
 - Handles supplier communication, certifications, and lab tests — critical for supplement brands
 - Arie uses a mix: Alibaba to find factories, Team Drop to manage logistics
- **Alibaba**
 - Used to identify and vet good manufacturing factories
- **Chemi Lab Discord** (Arie's private community)
 - Being relaunched/rebranded — previously doubled as Discord for his software Shoppppee Lab
 - Repositioned as a private group for "internet builders"
 - Arie is active in it, posts research, plans to keep adding content
