

AI tools I use to make money.

Channel: Brandon Carter · Published: Oct 03, 2026 · Watch: <https://www.youtube.com/shorts/XZ2Y4z9v0sU> Source: full transcript

Executive Summary

Brandon Carter walks through five AI and productivity tools — Codeex, Notion, Meta Muse, Claude Code, and Go High Level — that he actively uses to edit content, stay organized, automate admin tasks, build internal tools, and manage his entire sales pipeline.

Contents

-  Tool 1: Codeex (Video Editing)
-  Tool 2: Notion (Organization & Project Management)
-  Tool 3: Meta Muse (AI Personal Assistant)
-  Tool 4: Claude Code (Internal Tool Building)
-  Tool 5: Go High Level (CRM & Sales)

Tool 1: Codeex (Video Editing) 0:00

- Uses **Codeex** for all of his video editing needs
 - Covers short-form video editing (Shorts, Reels, etc.)
 - Also handles full-length YouTube video editing

Tool 2: Notion (Organization & Project Management) 0:05

- Uses **Notion** to organize his entire life — personal and business projects in one place
 - Team members can be added directly to his Notion board
 - Keeps everything organized across all projects simultaneously

Tool 3: Meta Muse (AI Personal Assistant) 0:14

- Created a custom AI persona inside Meta Muse — an African-American robot he named **"Tyrone"**
- Tyrone functions as a full personal assistant and automates a wide range of admin tasks:
 - Manages his calendar
 - Manages his inbox
 - Takes transcriptions from every meeting
 - Identifies action items for Brandon or his teammates
 - Pushes those action items into their Notion project management board

- Assigns each action item to the correct person
- Places everything on the relevant calendar automatically — no manual input required
- Notes that **Grok Bot** (by xAI/Elon Musk) could perform all the same functions, but he personally opts out because he is "not the biggest Elon Musk fan"

Tool 4: Claude Code (Internal Tool Building) 0:44

- Uses **Claude Code** (referred to as "Claw Code" verbally) to spin up custom tools
 - Tools are built for personal use or for internal business use
 - No further specifics provided on the types of tools built

Tool 5: Go High Level (CRM & Sales) 0:50

- **Go High Level** serves as his all-in-one customer relationship management (CRM) platform
- Core functions it handles for his business:
 - All leads flow directly into Go High Level
 - Sends email and SMS/text follow-ups to leads
 - Runs his entire sales team through the platform
 - Builds sales pages and landing pages
 - Tracks every lead from first touch to close
 - Ensures Brandon and his team follow up with every lead — no one falls through the cracks
- **Promotional offer:** Comment the word "GHL" on the video to get a free 30-day trial
