My Case for 1TB of iPhone Storage

Channel: Brandon Carter · Published: Nov 02, 2026 · Watch: https://www.youtube.com/shorts/Ezx8z67-SY0 Source: full transcript

📋 Executive Summary

Brandon Carter argues you should always buy the best iPhone — specifically 1TB storage — because smaller options fill up fast, and holding onto a great phone for years is more economical than cheap, repeated upgrades.

📑 Contents

- 📱 Buy the Best iPhone Upfront
- 💾 Why 256GB Isn't Enough
- 🔄 Breaking the Cheapness Cycle

📱 Buy the Best iPhone Upfront 0:00

- Core recommendation: next time you buy an iPhone, get **1TB storage**
  - His reasoning: when it's time to buy, you should buy the best version available
- Personal example: he bought an iPhone 11 four years ago
  - It served him so well that he has no urge or desire to upgrade even now
  - Implication: a top-spec phone bought once lasts much longer, reducing overall spend

💾 Why 256GB Isn't Enough 0:10

- 256GB fills up "very quickly" in normal use
- Key culprits that eat storage:
  - Photos and videos
  - 4K content specifically
  - Downloaded apps
- Result: you constantly run out of space

🔄 Breaking the Cheapness Cycle 0:22

- People also avoid deleting junk — described bluntly as laziness

> "This is why you're cheap right now — your laziness made you poor, and that poverty made you cheap.

> It's a vicious cycle, brother."

- The argument: laziness → insufficient storage management → forced to buy cheap options → still run out of space → cycle repeats
- The call to action: break out of this cycle by simply buying the 1TB model from the start
