

Grok Bot vs Muse vs Dots: Which Makes Money?

Channel: Brandon Carter · Published: Oct 01, 2026 · Watch: https://www.youtube.com/watch?v=gC_i1CYc8Ww Source: full transcript

Executive Summary

Brandon Carter stress-tests Grok Bot, Meta Muse, and OpenAI Dots as money-making employee replacements — not toys — rating each on price, integrations, and real business output across sales, content, trading, and operations.

- 🖥️ Interface & Access Comparison
- 🏆 Final Verdict

The Money-First Framework 0:00

- Brandon's core premise: treat these bots like employees who must work around the clock — not toys or calendar managers
 - Other YouTubers focus on inbox triage and calendar adjustments; Brandon focuses exclusively on income generation
 - "If we just wanted to have fun with these things, you're better off just getting a PlayStation."
- Evaluation method mirrors a job interview: pick a business problem, pick the best tool, measure output
- He has 30 remote employees coordinated via Slack; AI agents are evaluated against that operational context
- He is a **Codex power user** — does ~85% of all work, including video editing, inside ChatGPT Codex
 - Bought the \$500/month Codex plan within an hour of it being announced
 - Also purchased the \$200 ChatGPT Codex keyboard despite public mockery: "That sounds like a good purchase for a maniac or a crazy person. And I am both."
- Key mental model for ROI: compare total cost (subscription + overage + connected tools) against actual dollars earned — if it's not making money, it's worthless

Pricing Breakdown [2:38](#)

Tool	Entry Price	Brandon's Plan	Credit Burn Rate
Grok Bot	\$20/month	\$100/month	Very fast — rationing tasks, still runs out
Meta Muse	Free	~\$60/month upgrade	Very slow — 60 cents used with many active tasks
ChatGPT Dots	Requires ~\$100/month min	\$500/month (Codex)	Unknown but expected high due to Astra model

- Grok Bot: credits deplete rapidly with real workloads; Brandon jokes saying the word "Grockbot" too many times will exhaust his weekly credits
- Muse: **free tier exists** with no excuse not to use it; paid tiers offer much more usage per dollar than Grok
- Dots: pulls from your entire ChatGPT credit pool — recurring background tasks can silently drain credits, leaving you unable to do other work mid-month
- Extra credits can be purchased on both Grok and OpenAI, but that compounds cost

Context & Memory Each Tool Carries [3:49](#)

- **Grok Bot**
 - You assign each bot a role; bots have individual memory and tool access
 - Bots can share files; controversy over whether each bot gets its own computer — Brandon's experience suggests they share one computer
- **Meta Muse**
 - Has memory files you can manually update
 - Saves preferences automatically
 - Has its own dedicated virtual computer
- **ChatGPT Dots**
 - Carries full context from all prior ChatGPT conversation history
 - Has its own memory and its own computer
 - Immediately began taking action on Brandon's behalf upon setup — already knew his situation from prior Codex/ChatGPT usage

Grok Bot: The Department Head [4:34](#)

- Brandon's original framing: Grok Bot = department head managing a team of specialized sub-bots
- **Favorite bots he has built:**
 - Chief of Staff bot — oversees everything
 - Project Manager bot — manages active projects

- Subscription Auditor bot — scans email for active subscriptions and auto-cancels unwanted ones by logging in and unsubscribing directly
- **Dealbot** — his most business-critical bot
 - Hooked into Go High Level CRM
 - No native GHM integration exists, so he used **AgentMail** (a service that gives email addresses to AI agents)
 - Gave Grok Bot its own email address and added it as a GHM employee in the CRM
 - Bot monitors every deal/lead through the entire sales pipeline
 - When salespeople fail to close, the bot manages follow-up automatically
- Sales Call Reviewer bot
 - Grabs transcripts from recorded sales calls
 - Evaluates each call against his custom sales training criteria
 - Produces a summary of call performance
 - "As a sales manager, this has made my job so much easier."
 - Note: Muse did NOT have a connector for his sales call recording tool, giving Grok Bot the edge here
- Stock Trading bot
 - Connected to a Robinhood Agentic account (Robinhood's AI account feature)
 - Put \$1,000 in and tasked Grok Bot with trading — still in testing
- Integrates with Slack (all three tools do, but covered in Interface section)
- Weakness: **expensive and credit-hungry**; before Muse launched, Brandon was constantly adding money to his account

Meta Muse (Tyrone): The Executive Assistant 7:44

- Default avatar is a furry creature ("baby from Monsters Inc."); Brandon customized his to an "African-American hip-hop robot" named **Tyrone**
- Originally intended as personal assistant; evolved into a legitimate business tool
- **Key strength: native Meta/Instagram integration**
 - Can analyze your own Instagram: followers, interactions, demographics, top-performing content, what to do more/less of
 - Can analyze **any** public Instagram account — Brandon analyzed competitor Greg (Kenobody), whose numbers are roughly 2× his own, to reverse-engineer Greg's content strategy
 - Once identified top-performing reels, Brandon asked Muse to write more scripts in that style — results performed well
- **Instagram DM Lead Recovery workflow (free money use case):**
 - Set up a dedicated chat whose only job is finding leads that slipped through the cracks
 - Prompt: "Give me a list of leads that may have fallen through the cracks like 90 days ago"

- Muse scans DMs, surfaces hot leads, drafts re-engagement messages, and sends them directly from within the interface with one "allow" click
- Can be run daily; Brandon's point: "If you get one extra client from it, that was worth it."
- **Polymarket Trading:**
 - Muse is logged into Polymarket on its own virtual computer and trading on his behalf
 - Current P&L: **41 cents** — "Let's go."
- **Personal assistant wins:**
 - Saw a birthday party on Brandon's calendar (friend's 4-year-old daughter), reminded him he hadn't bought a gift, researched the best toy for a 4-year-old, purchased it — arrived at his house within an hour
 - Identified Zuck's watch at Meta Connect as a \$112,000 watch
- **New integrations (just announced at time of filming):**
 - **Go High Level official connector** — Grok Bot still has no official GHL integration; Muse now does
 - **Slack integration** — previously absent, now available
 - These additions mean Muse *could* theoretically replace all other tools
- **Cost advantage is massive:** Brandon is on a \$60/month Muse plan vs. \$100/month Grok plan, and Muse uses far fewer tokens per equivalent workload

"Out of the two, if I had to pick one, I'm picking Muse over Grockbot. It's official."

● ChatGPT Dots: The Chief of Staff 13:04

- Brandon only had access for less than 24 hours at time of filming — all impressions are early
- Lives inside Codex — appears as a small dot (he set his to purple, his favorite color)
- **Killer advantage: full ChatGPT history context**
 - Already knew Brandon's entire workflow, projects, preferences from years of Codex usage
 - Immediately started taking initiative without being asked
- **Tasks completed within first 24 hours:**
 - Spotted a to-do item on his calendar and completed the entire task autonomously
 - Brandon prompted: find all the skills/scripts I use to edit videos and make content, download them from Codex, put them in a folder, document what each is used for and how to use it, then upload to Google Drive — it did all of this from a single prompt
- **Notable behavior:** takes initiative proactively; another reviewer said it was bad at initiative — Brandon's early experience contradicts that
- **Trading limitation:** Dots refused to make trades on Robinhood — "I can't make trades for you cuz I'm soft" (paraphrased); Grok Bot has no such restriction
- Can do almost everything the other two can, with the benefit of Codex context
- **Critical concern — model cost:**

- Dots runs on **Astra**, OpenAI's most expensive model
- Cannot switch models (unlike everything else in Codex)
- Soul 6.1 would be more than sufficient for most Dots use cases, but they chose Astra
- Hypothesis: forcing Astra burns credits faster, compelling users to buy more each month
- Risk: background/recurring tasks silently drain your shared ChatGPT credit pool, potentially blocking all other Codex work mid-month

Interface & Access Comparison 15:27

Tool	Mobile App	Desktop	Other Access	Slack Integration
Grok Bot	Yes, good	Yes + bot groups/teams	—	Yes
Meta Muse	Yes, phenomenal	Yes	WhatsApp (not useful per Brandon)	Yes (newly added)
ChatGPT Dots	ChatGPT app	ChatGPT web, Codex, ChatGPT Work	—	Yes

- Grok Bot's "bot groups and teams" feature (agents talking to each other): Brandon dismisses this entirely
 - "I don't want it wasting credits having conversations with other agents. You are all the same thing. Just get the job done. Don't talk to other robots about it."
- Slack is central hub for Brandon's 30-person remote team; all three tools integrate
- Dots in Slack: can DM team members either from Brandon's Slack account or its own — still evaluating usefulness

Final Verdict 16:56

- Brandon is still using all three — currently in testing phase
- **If forced to pick one: Muse wins**
 - Free to start, far cheaper at scale
 - Native Instagram + Facebook integration (unique money-making angle)
 - New GHL and Slack connectors close the gap with Grok Bot's workflow integrations
 - Personal assistant capabilities (shopping, calendar awareness) are best in class
- **Grok Bot's only remaining edge:** willingness to make trades on Robinhood (Dots refuses, Muse untested in that regard) — \$1,000 live test ongoing
- **Dots' future role:** most promising for Codex power users given deep context, but credit burn on Astra model is a real financial risk to monitor
- Key recommendation for everyone: **download Muse immediately** — it's free, it integrates with Instagram and Facebook, and one recovered lead pays for itself

- Brandon's Codex skills bundle (video editing, content creation, social media automation) available free with a 30-day Go High Level trial via description link
