Rich People Have Assistants. Now Yours Is Free.

Channel: Brandon Carter · Published: Nov 11, 2026 · Watch: https://www.youtube.com/shorts/9OusUmMb37I Source: full transcript

📋 Executive Summary

Brandon Carter argues Meta's free AI assistant stands out from paid rivals by integrating directly with Instagram — enabling competitor research, content analysis, and personalized script writing at no cost.

📑 Contents

- 💼 The Assistant Advantage: Rich vs. Everyone Else
- 🤖 AI Assistant Landscape
- 📱 What Makes Meta Muse Different: Instagram Access
- ✍️ Personalized Content Generation
- 💰 Pricing Comparison

💼 The Assistant Advantage: Rich vs. Everyone Else 0:00

- Rich people outsource their errands and logistics to personal assistants
  - A good human assistant costs roughly **$70,000 a year**
- The core pitch: you can now get a comparable assistant for free via AI

🤖 AI Assistant Landscape 0:00

- Brandon claims to have tested every major AI assistant available
  - Tools mentioned: ChatGPT ("Dots"), Claude ("Claw"), Gemini ("Duet"), "Rockbot", and "Hermes in bot mode"
  - His verdict: they all "pretty much do the same things"
- Common use cases across all assistants:
  - Checking email
  - Organizing calendars
  - Making dinner reservations

📱 What Makes Meta Muse Different: Instagram Access 0:23

- Meta's AI assistant (branded here as "Meta Muse") has **direct access to Instagram** — a feature no other listed tool has
- This integration enables monetization-focused workflows, not just productivity tasks

- Example workflow he describes:
  - Tell Meta Muse: "Find all the top competitors in my niche"
  - "Rank their top performing content over the last 90 days"
  - "Tell me what topics, hooks, and formats they're using that's getting the best results"
  - "Then take that data and write 10 scripts for me in my voice"

✍️ Personalized Content Generation 0:47

- Meta Muse knows everything the user has ever posted on their account
  - This includes: ideas posted, tips shared, and personal stories published online
- Because of this, it doesn't produce generic AI output — it writes in the user's actual voice using their own historical data

> "It's going to write what you would have actually said because it has all your data. As scary as that is."

- The "scariness" caveat: Brandon acknowledges the privacy implications but frames it as a net positive for content creators

💰 Pricing Comparison 1:10

- Meta Muse is free
- Competing tools require paid plans:

Tool	Cost
Meta Muse	Free
"Grankbot"	No free tier
ChatGPT "Dots"	Requires ~$100/month plan

- Bottom line: Meta's assistant delivers premium-tier functionality (competitor research + personalized scripting) at zero cost, making it accessible beyond those who can afford $70k/year human assistants
