Is Orange Juice Worth 3 Miles Of Running?

Channel: Brandon Carter · Published: Oct 28, 2026 · Watch: https://www.youtube.com/shorts/bv5kg9oJz64 Source: full transcript

📋 Executive Summary

Fruit juice strips out fiber — the most valuable part of fruit — leaving only sugar, water, and vitamins. A single glass of orange juice can carry hundreds of calories, making whole fruit the smarter, lower-calorie alternative.

📑 Contents

- 🍊 The Problem With Fruit Juice
- 🏃 The Calorie Cost
- 💊 The "But It Has Vitamins" Argument
- 🍎 What To Do Instead

🍊 The Problem With Fruit Juice 0:00

- Fruit juice is described as "a deception"
  - The juicing process squeezes out liquid and discards what remains
  - What you are left with is essentially **sugar, water, and vitamins**
  - The most beneficial component of fruit — fiber — is thrown away entirely

🏃 The Calorie Cost 0:00

- A single glass of orange juice can contain several hundred calories
  - A useful benchmark: burning **100 calories requires running roughly 1 mile**
  - By that measure, one glass of OJ could cost the equivalent of ~3 miles of running
- The rhetorical question posed: "Is that glass of orange juice worth 3 miles of running?"
  - The answer given: no

💊 The "But It Has Vitamins" Argument 0:20

- A common defence of juice is its vitamin C content
- The counter-argument: drinking orange juice for vitamins is no different from drinking Kool-Aid with a vitamin supplement
  - The vitamins do not offset the high sugar and calorie load

🍎 What To Do Instead 0:20

- If you want fruit, eat **whole fruit** — not juice
  - Reason 1: whole fruit delivers fewer calories for the same volume
  - Reason 2: whole fruit retains its fiber
    - Fiber actively counteracts many of the negative effects of the sugar naturally present in fruit
- The takeaway is simple: swap juice for the actual fruit it came from
